BRITISH ELECTION PANEL STUDY OCTOBER 1995 SURVEY

	710BE11 1999 GOTTE 1	
	This is the latest stage of the British Election Panel Study, with which you have kindly helped us on previous occasions. We would very much appreciate your help this time by completing this short questionnaire and returning it to us in the pre-paid envelope provided, as soon as you possibly can. The questions can be answered simply by placing a tick (🗸) in one or more of the boxes. No special knowledge is needed. We are sure that everyone will be able to take part, not just those with strong opinions or particular viewpoints. The questionnaire should be filled in only by the person interviewed on previous occasions. The answers you give will be treated as confidential and anonymous. Thank you for your help

INTERVIEWER:

NOW ENTER THE SERIAL NUMBER ON THE SELF-COMPLETION QUESTIONNAIRE AND HAND IT TO THE RESPONDENT WITH A PENCIL

36a. The next set of questions, which are in this short questionnaire, will probably be easier to answer if you read them.

All of them can be answered just by ticking a box. If you don't have an opinion on a particular question, just tick the 'Neither' box or the `Can't choose' box.

[ADD ONLY IF NECESSARY:

The answers you give, like all the others, will be confidential. All we put on this questionnaire is a number so that we can link it with the interview questionnaire.]

If you need any help, do please ask. I will just be doing some paperwork while you fill in the questionnaire.

WHEN RESPONDENT HAS FINISHED, TAKE BACK THE SELF-COMPLETION QUESTIONNAIRE AND CHECK THAT EVERY QUESTION HAS BEEN ANSWERED

... AND CODE:

b.

Self-completion questionnaire completed and serial numbered

37a. Looking back over the <u>last year</u> or so, would you say that Britain's economy has got stronger, got weaker or has stayed about the same?

IF GOT STRONGER OR WEAKER: By a lot or a little?

Got a lot stronger 1
Got a little stronger 2
Stayed about the same 3
Got a little weaker 4
Got a lot weaker 5
(Don't know) 8

b. And looking forward to the <u>year ahead</u>, do you think Britain's economy will get stronger, get weaker or stay about the same?

IF GET STRONGER OR WEAKER: By a lot or a little?

Get a lot stronger 1
Get a little stronger 2
Stay about the same 3
Get a little weaker 4
Get a lot weaker 5
(Don't know) 8

INTERVIEWER:

39a.

NOW ENTER THE SERIAL NUMBER ON THE SELF-COMPLETION QUESTIONNAIRE \dots

... AND HAND IT TO THE RESPONDENT WITH A PEN OR PENCIL

The next set of questions, which are in this short questionnaire, will probably be easier to answer if you read them.

All of them can be answered just by ticking a box. If you don't have an opinion on a particular question, just tick the `Can't choose' box or the 'Neither' box in the middle.

Yes, both self and other

[ADD ONLY IF NECESSARY:

The answers you give, like all the others, will be confidential. All we put on this questionnaire is a number so that we can link it with the interview questionnaire.]

If you need any help, do please ask. I will just be doing some paperwork while you fill in the questionnaire.

WHEN RESPONDENT HAS FINISHED, TAKE BACK THE SELF-COMPLETION QUESTIONNAIRE AND CHECK THAT EVERY QUESTION HAS BEEN ANSWERED

BRITISH ELECTION PANEL STUDY - I 1997 SURVEY

P.1653

SELF-COMPLETION QUESTIONNAIRE

Spring 1997

The last study in this series consists of the interview that you are doing now, and this short self-completion questionnaire.

All the questions can be answered just by ticking a box. If you don't have an opinion on a particular question, just tick the `Can't choose' box, or the `Neither' box in the middle.

The answers you give, like all the others, will be confidential. All we put on this questionnaire is a number so that we can link it with the interview questionnaire.

If you need any help, please ask the interviewer.

Thank you for your help.

Serial No. 50 5005-06

1. Background

1 The 1992 BGES surveys

The baseline for the British Election Panel Survey (BEPS) series was a cross-section survey of electors in England, Scotland and Wales, carried out after the last general election in April 1992. This study was the most recent in the British General Election Survey (BGES) series, carried out after every general election since 1964. The BGES series was established by David Butler and Donald Stokes who directed the first three studies (1964, 1966 and 1970) Responsibility for the series then passed from Nuffield College to the University of Essex, the two 1974 surveys being directed by Ivor Crewe, Bo Sarlvik and James Alt, joined by David Robertson in 1979. The three most recent studies have been the responsibility of Anthony Heath (now of Nuffield College Oxford), Roger Jowell (of Social and Community Planning Research) and John Curtice (now of the University of Strathclyde), together with other researchers from SCPR and Oxford. The research team for the 1992 studies included Lindsay Brook, Bridget Taylor and Gillian Prior

All the post-election cross-section surveys have been based on probability samples designed to be representative of the electorate of Great Britain² and have been conducted by face-to-face interview. Now the longest series of academic surveys in Britain, the BGES studies have

¹ There have also been two non-election year surveys (in 1963 and 1969), a campaign study' in 1987, a EEC Referendum study (conducted by post) in 1974, and an additional study of Welsh electors in 1979

² Except in years when electors in Scotland have been over-sampled, the 'crofting counties' north of the Caledonian canal have been excluded because of the prohibitive cost of interviewing in sparsely-populated areas

been noted for the high quality of their design and organisation and for the richness of the resulting datasets

A particular feature of the 1992 study³ was its over-sample of Scottish electors, to allow more detailed investigation of voting behaviour, attitudes to devolution and independence, 'national identity' and so on, north of the border Around 950 electors in Scotland (including some living north of the Caledonian Canal) were interviewed, instead of the 250 or so that we might have expected in the absence of a Scottish boost. This element was also funded by the ESRC under a separate grant (No R 000 232 960) to researchers in the Department of Government, University of Strathclyde

In addition to the cross-sectional surveys among fresh samples of electors, between every pair of elections⁴ panel surveys have been conducted in which respondents to the previous cross-section survey have been re-interviewed. In 1992, the Economic and Social Research Council (as well as part-funding the cross-section survey) provided funds⁵ for the incumbent BGES team to carry out three further surveys among electors first interviewed in the 1987 post-election study

- a pre-election telephone survey, with interviewing taking place in the three weeks of the election campaign leading up to polling day,
- a post-election survey, also by telephone, with respondents interviewed over the four days immediately after polling day (Thursday April 9th),
- a face-to-face interview survey of these panel members, beginning in the following week, but this time including those who either were not on the telephone, or could not be reached by telephone during the previous two phases

A brief account of the panel element of the 1992 BGES study is given in Annex I of this Report

The structure of the BGES series since its inception in 1964 is shown schematically below

[Insert chart from Appendix to 'Understanding Political Change', p 227, updated to 1992]

Funding for the 1992 cross-section surveys came from two sources The ESRC awarded a grant (No Y 304 253 011) to the SCPR/Nuffield College team. This was supplemented by a grant from one of the Sainsbury Family Charitable Trusts, which allowed funds which might otherwise have been deployed to carrying out the 1992 British Social Attitudes (BSA) survey

³ In common with the October 1974 and 1979 BGES surveys, which also incorporated a Scottish boost

⁴ Except those of 1979 and 1983, and 1987 and 1992 when funding from the ESRC (formerly the SSRC) was not made available

⁵ Through its grant (No Y 303 253 001) to the Joint Unit for the Study of Social Trends (JUSST), an ESRC-funded Research Centre linking SCPR and Nuffield College Oxford The 'campaign' and post-polling day telephone rounds were suggestions of the Election Studies Advisory and Management Committee (ESAMC), and adopted by the research team

to help support the 1992 BGES survey⁶ The research team wishes to acknowledge its gratitude to both

2 The new panel study

In 1989, the ESRC provided funding, initially for five years, for a Research Centre linking SCPR and Nuffield College Oxford The Joint Unit for the Study of Social Trends (JUSST), as it was then called, embarked on a programme of surveys, methodological experiments, cross-national comparative research and publications⁷ In 1994, researchers in the Joint Unit successfully applied to the ESRC for funding (under Award No M 303 253 001) to extend the life of the Unit for a further five years (until September 1999) The Unit was renamed the Centre for Research into Elections and Social Trends (CREST), its main activity being to study the attitudes and behaviour of the British electorate *via* a series of regular inter-election panel surveys

This enterprise is known as the *British Election Panel Survey (BEPS)* Its innovative element is to investigate *individual-level* stability and change in political attitudes, economic and social circumstances, and voting behaviour over the lifetime of one parliament and beyond the next general election. Until mid-1995 *BEPS* rounds had been annual, with fieldwork timed to begin immediately after either the local elections (1993⁸ and 1995) or the elections for the European Parliament (1994). This will enable researchers to examine the extent to which political attitudes translate into voting behaviour, and the extent to which observed changes are ephemeral or longer-lasting. As the next election approaches, the intention is to question electors every six months, instead of annually, in an effort to capture even shorter-term shifts in attitudes and behaviour. Hence there have been two survey rounds in 1995, and there will be two in 1996, with the final round in this panel series taking place immediately after the next general election.

In summary, completed BEPS fieldwork rounds are as follows

Date	Mode St	tart of Fieldwork
1992	Face-to-face interview with self-completion supplement	Immediately following general election on 9th April
1993	Postal questionnaire with supplementary telephone interview	Following local elections on 6th May

⁶ There had been a similar arrangement in 1987, when the BSA grant for 1988 was brought forward to help fund the 1987 BGES cross-section survey

⁷ For information on the Unit's programme, see its series of Working Papers available from Nuffield College Oxford (now succeeded by the CREST series of Working Papers)

⁸ Although funding for CREST and its series of inter-election studies was not yet in place in May 1993, it was decided nonetheless to recontact the embryo panel, both as an essential exercise in panel maintenance and to begin (in a modest way) the monitoring of political attitudes and voting behaviour (the latter at the May local elections)

1994	Face-to-face interview	Immediately following European Parliament
	with self-completion supplement	elections on 9th June

- 1995 (1) Face-to-face interview Immediately following local elections with self-completion supplement on 4th June
- 1995 (2) Telephone interview with supplementary postal questionnaire party conference season (13th October)

A new panel will be recruited after the next general election and further fieldwork rounds will take place until autumn 1998

2. Objectives of the *BGES* series

A central aim of the *BGES*, the foundation upon which the present *BEPS* programme is built, has always been to maintain the integrity of the series. Particular emphasis is placed on maintaining the high standards of sampling, fieldwork and coding established in the past, and on repeating 'core' items to ensure continuity

A second task of the series has always been to provide benchmark data on the characteristics of the electorate - on their attitudes, party identification and behaviour, and on the interrelations between these characteristics and aspects of social structure. This has proved invaluable in charting and describing both long- and short-term trends (the latter being especially useful in the context of the *BEPS* programme)

A further important aim was identified for the 1992 BGES studies. First, mainly via the panel study, the research team intended to investigate more thoroughly than had been possible in the past questions of causality. To look at (for example) the effect of economic circumstances, unemployment, purchase of shares or private health care on voting behaviour, or to examine the consequences of changes in party policy in terms of respondent's own political attitudes and party allegiance. This is a theme to which (through the collection of data on respondents' recent life histories) the BEPS series has already returned.

A particular feature of the Scottish booster sample was an extra module of questions addressing issues such as possible constitutional changes, pride in ones country and national identity. In addition, questions about the main political parties were expanded to include the SNP

3. Survey methods

1 April 1992 BGES baseline study

The sample

The survey was designed to yield a representative sample of eligible voters in Great Britain⁹ Like its predecessors, it differed from a random sample of all *resident adults* in that it comprised only people on the electoral register and eligible to vote at the general election (in this case, on 9th April 1992)

A three-stage selection procedure was used First, a sample of 218 constituencies was selected (159 in England and Wales and 59 in Scotland¹⁰) with probability proportionate to size of electorate Before selection, the constituencies had been stratified according to the following factors

- Registrar General's Standard Region
- population density bands (persons per hectare)
- percentage of dwellings owner-occupied¹¹

In order to make the strata fairly equal in size, the population density banding was varied according to Standard Region

The second stage was the ordering of all polling districts within the selected constituencies in a geographically coherent sequence, according to the ward labelling system used within the constituency. Any polling district with fewer than 500 electors was combined with the one following it, to form one unit. This meant that addresses in any one sampling point would not be too tightly clustered.

In anticipation that a general election would be called in November 1991, this second stage of sample selection was carried out using the electoral registers current between February 1991 and February 1992. Indeed a sample of electors had already been drawn from these registers, so that fieldwork could begin immediately after polling day. When it become evident, however, that the election would be in the following spring, the research team applied to, and obtained from, the ESRC the extra funding necessary to draw a fresh sample of electors from the new registers when they started to become available in mid-February 1992.

In the course of selecting constituencies, one elector was picked at random. The polling district within which this elector lived became the selected polling district. In this way, its probability of selection was proportionate to size of electorate.

⁹ This study, in common with all previous *BGES* studies, excluded Northern Ireland However in 1992 for the first time the ESRC provided funds for a separate study of the Northern Irish electorate, under the direction of a different team of investigators

The sampling frame this time included (as noted above), the five constituencies with a small and scattered electorate in the Scottish highlands and islands north of the Caledonian Canal

¹¹ According to 1981 Census data, the latest available at that time

The third stage was the selection of a sample of electors Within each of the 218 selected polling districts, 24 electors were chosen with equal probability, starting from a randomly chosen point, and thereafter picking the name of every nth elector. Anyone ineligible to vote in the general election (peers and young people aged under 18 on April 9th) was replaced with an eligible elector, whose name was selected by using random number tables

A sample of 5,232 names was selected by these methods (3,816 in England and Wales and 1 416 in Scotland)

Fieldwork and response

A small-scale pilot was carried out in early December, 1991 Six interviewers (including two in Scotland) between them carried out 48 interviews, and administered a short self-completion questionnaire to respondents. Afterwards the interviewers attended a debriefing, to discuss the pilot results with members of the SCPR/Oxford and Strathclyde research teams

Interviewers undertaking assignments on the main fieldwork phase were personally briefed by SCPR members of the BGES research team Fieldwork in England and Wales began on 10th April 1992, and in Scotland on 14th April A total of 217 interviewers undertook assignments on the cross-section survey, 163 in England and Wales and 54 in Scotland)

The names of some potential respondents who had proved difficult to find at home, or had refused or broken an appointment for interview, were re-issued to interviewers who had not made the initial calls In addition, movers who were traced to new addresses were followed up and, where possible, interviewed This re-issue phase resulted in 283 productive interviews and raised response by 6 3 per cent. The final response rate was 73 per cent, (72 per cent in England and Wales and 73 per cent in Scotland)

In all, 88 per cent of interviews achieved were obtained by the end of May 1992, and 97 per cent by the end of June The remaining three per cent were conducted during July and August, mainly following recalls on respondents who were unable or unwilling to be interviewed earlier The date of interview appears on the dataset as the variable DateInt

Details of the final response breakdown as	re shown 1 England a		ible bel TO			<u> </u>

Other	74		26		100	

Response varied somewhat between Standard Regions, ranging from 78 per cent in Yorkshire and Humberside to 65 per cent in Greater London. As in previous *BGES* rounds, weights were applied to ensure that the sample represented the correct proportion of electors in each Standard Region (see below)

Weighting

Weighting had been carried out on *BGES* 1983 and 1987, and the equivalent exercise was repeated in 1992. This included, in 1992, the down-weighting of the Scottish booster sample to form a representative British sample. The following table shows the weights applied to cases in each Standard Region.

Standard	No	%					
Region	140	70					
Scotland	3,927,475	9 23	957	27 1	x 0 276	264	9 2
North	2,391,410	5 62	177	5 0	x 0 907	161	5 6
North West	4,825,960	11 34	296	8 4	x 1 085	321	11 3
Yorks & Humberside	3,827,212	8 99	267	76	x 0 962	257	90
West Midlands	4,013,421	9 43	293	8 3	x 0 920	270	9 4
East Midlands	3,092,711	7 27	214	6 1	x 0 971	208	7 5
East Anglia	1,573,318	3 70	94	2 7	x ! 124	106	3 7
South West	3,639,627	8 55	250	7 1	x 0 978	245	8 6
South East	8,133,367	19 12	534	15 1	x 1 023	546	19 1
Greater London	4,910,855	11 55	303	86	x 1 089	330	115
Wales _	2,217,713	5 21	149	4 2	x 0 999	149	5 2
DTALS	42,553,069	100 01	3,534	100 2		2,857	99 9

Data on the number of electors are taken from *Electoral Statistics* 1992 (OPCS, 1992)

It is therefore essential to weight the sample, using the variable *WtFactor*, this weights the number of respondents in each Standard Region to the proportions of registered electors in each Region

Self-completion supplement

Following the successful introduction of a self-completion questionnaire on the 1987 BGES cross-section survey¹², respondents were again asked to complete a questionnaire after the interview, either for collection by the interviewer or to return by post. In all, 93 per cent of respondents interviewed face-to-face completed the supplement. It contained (among other items) a set of questions designed to explore the relative importance of different sources of political information, fielded as part of the Cross-National Election Programme (CNEP)

As noted above, 230 respondents to the face-to-face interview did not complete a self-completion supplement. These cases appear as 'missing' in the SPSS^{-x} system file

The split-sample experiment

A split-sample experiment was conducted to find out whether or not there was a questionorder effect according to whether respondents were asked first about their vote and then about their party identification or *vice-versa* (see Heath and Pierce, 1992, McAllister and Wattenberg, 1995) Respondents with even serial numbers were asked the question on party identification before being asked about their vote, whereas the respondents with odd serial numbers were asked the question on party identification afterwards. Thus this series of questions appears twice in the questionnaire, with the following question numbers

	Even serial numbers	Odd serial numbers	Derived variables
Party identification	A6a	B13a	PartyId
[if no Party Id] closer to which party?	A6b	B13b	PtyCls
Strength of Party Id	A6c	B13c	IdStrng
Main aim of party	A6d	B13d	Сотргот

The four derived variables above combine the responses of the two half-samples, and it is these that should be used in the analysis

This innovation on the BGES series was 'imported' from SCPR's annual British Social Attitudes survey, on which a self-completion supplement had been used successfully since BSA's inception in 1983

Cross-national components

There were two cross-national components to the 1992 BGES cross-section study

- In a further split-run experiment, a number of scale items were taken from the American National Election Study (ANES), and fielded on *BGES* 1992 Topics covered were defence spending, the role of government in welfare provision and women's rights These will be found on pp 21-23 of the main questionnaire (Qs B 40-B 42)
- 2 Through participation in the Cross-National Election Project (CNEP), the research team helped develop a number of questions on attention to the media and on personal networks. These were fielded on the self-completion questionnaire (Qs 2 07-2 18). This will allow comparison with electorates in Germany, the USA, Spain and Japan (check!)

Variable names

In most cases variable names are based on question number and consist of question number preceded by the letter V Variables in the classification section at the end of the face-to-face interview are numbered from V901 (thus V901a, V901b V902a and so on), variables on the self-completion supplement are numbered from V201 (thus V202a, V201b and so on) Other variable names which do not follow the question-number convention (such as occupation and class variables) should be self-explanatory

The SPSS-x system file also contains a small number of derived variables. These are listed in the Codebook

Other conventions employed

The principal ones employed were

1 Filters or skips

At various points in the survey, questions were asked of sub-samples of respondents, while others were routed past such questions. On a small number of variables morelated one filter operated simultaneously. Cases which were filtered out (or skipped) are defined as -1 (or -2 or -3) and are labelled "Skipped". The reasons for the skip are also given, but often (since space is limited) in a much shortened form

2 'Not answereds'

Where there are no data for a particular variable (i.e. some respondents did not give a response to that question), code 9 (or 99 or 999 or 9999) is used

3 'Don't knows'

'Don't know' responses are usually coded 8 (or 98 or 998)

Constituency numbers

All selected constituencies in England, Wales and Scotland havé been allocated their new and old Press Association (PA) Number All selected constituencies can also be identified by their old OPCS Constituency Number All those in England and Wales have also been allocated their new OPCS Number But new OPCS Constituency Numbers have not been assigned to constituencies in Scotland, and so are missing from the dataset *Postcoding*

The addresses of all respondents have been postcoded. The full postcode is, for reasons of confidentiality, kept in a separate file and only the postcode sector on each address has been added to the data set deposited at the Data Archive. The variable name is XxxxXxxx (Bridget, please supply!)

Validation of turnout

Records for England and Wales showing which electors voted (or were registered as postal voters) are kept at the Lord Chancellor's Office and are available for public inspection for up to a year after each election. As in the 1987 election study, where possible we checked the *report* that respondents in England and Wales gave about their turnout ("Did you vote in the general election on the 9th April") against the official records (see Swaddle and Heath, 1989). This information has been added to the dataset (variable name *XxxxXxxx -Bridget*, *help¹*)

In principle, similar records for Scotland are also available. Since, however, they are not held centrally it is much more time-consuming and costly to extend this exercise to Scottish respondents. Nonetheless it was possible to validate turnout, by means of correspondence with Sheriffs' Offices, for XXX (XX%) of the 957 Scottish electors on the achieved sample, and these data too have been added to the dataset with the same variable name. Is this so?

2. May 1993 BEPS study

Introduction

In 1993, the SCPR/Nuffield Joint Unit submitted its grant application to the ESRC for a further five years of funding for the Joint Unit (JUSST). As noted, the core activity of the Unit's next five years was to be regular rounds of interviews with respondents to the 1992 BGES cross-section survey. If this strategy were to work, it seemed imperative to contact these respondents again before too long a time has passed, so that the embryonic panel could be maintained until fresh funding had been secured. There was concern also that a two-year 'data gap' between rounds would be debilitating for the new panel survey. We decided therefore, as part of the panel maintenance exercise, to collect a limited amount of information about electors' perceptions on a range of issues including the state of the economy and the competence (or otherwise) of the party leaders. We also included a few questions on voting in the local elections, for those respondents to who had the chance to vote on 6th May

Sample and fieldwork

The aim was to obtain a completed questionnaire from as many as possible of respondents to the 1992 BGES cross-section survey (including all the respondents in the 1992 Scottish oversample). All 3,534 respondents to the 1992 survey were asked whether or not they would be willing to be re-interviewed, 3,057 said they would be willing, while 477 were unwilling. In the event, we wrote to all 3,534 respondents asking them to complete a very short (4-page) postal questionnaire in the hope that some of those who had declined another face-to-face interview would be willing to help with a postal survey, and might then remain in the panel 'Willing' respondents were assigned to Sample A. However those who had said they were unwilling (Sample B) were treated somewhat differently from the others they were given the choice of 'opting out' of the panel, they were not sent reminder letters, and none of them was followed up by telephone (a tactic we employed with the remainder of respondents)

All respondents were also sent a 'tracing form' which they were asked to return after ticking one of five boxes (A -E)

A I am the person whose name is on the label below, and I still live at the same address

Please send this form back with your questionnaire

- **B.** I am this person, but I have a new address Please give your new address and telephone number below and enclose it with your questionnaire
- C. I am not the person whose name is on the label below, but I know his/her new address

Please give new address and telephone number below and enclose it with your questionnaire

D. I am not this person, but I know someone who may be able to help you locate him/her

Please give name and address of contact below and send the form back

E. I am not this person and I cannot help you locate him/her Please return this form anyway without filling in anything else

Those in Sample B were given the opportunity to 'opt out' of the panel by ticking a box on the tracing form

'Willing' sample members who had not responded after two weeks (n= 1,636) were sent a reminder letter, and (if they still had not replied) they were sent a further reminder letter and another questionnaire (n= 1,358)

In 1992, respondents who agreed to a possible further interview were asked for a 'stable address', that is one through which they might be contacted in future (typically a family member living nearby, or a neighbour) We attempted to contact sample members who failed to respond at the stable address that they had given us Where we had a new address, we followed respondents up to that new address

In a final effort to raise response, those respondents who had not replied at all by a certain date but had been willing to be re-interviewed, and for whom we had a telephone number, were then telephoned and where possible interviewed with an especially adapted version of the postal questionnaire. However, the postal questionnaire was designed with the possibility of a telephone follow-up in mind, so the two versions can be regarded as functionally equivalent. This phase of the survey began on 28th June. Some successful tracing was also carried out during the telephone phase. The panel name and address file was updated with all new information from both interviewers and respondents.

It should be noted that, of the xxxx respondents re-contacted in 1993 and completing a questionnaire, xx (X per cent) had moved address. These respondents have been assigned code 1 in variable Mover93 on the dataset. Bridget - could you supply these figures?

Response and attrition

All of the 3,534 electors who were interviewed in 1992 were sent a questionnaire, or an attempt was made to contact and interview them over the telephone. A total of 2,622 respondents completed a questionnaire, an overall gross response rate of 74.2 per cent Among those who agreed in 1992 to be re-interviewed, respose was almost 80 (79.6) per cent. The response figures are summarised in the table below.

	Sample A Willing to be re-interviewed		Sample B Unwilling to l re-interviewe		Total		
	No	%	No	%	No	%	
Names issued	3,057		477		3,534		
Interview obtained							
- postal phase	2,068	67 6	121	25 4	2,189	619	
- telephone phase	365	119	68	14 3	433	123	
TOTAL	2,433	79 6	189	39 6	2,622	74 2	

Full details are shown on Table 1 (Panel Attrition by Spring 1993)

Response rates in England/Wales and Scotland were almost identical

TOTAL	1,920	74 4	702	73 5	2,622	74 2
Out of scope Unproductive	127	4 9	41	4 3	168	4 8

- refusal	66	6 4	72	7 5	237	67
- non-contact	299	11.5	104	10 9	403	114
- other reasons	68	26	36	3 8	104	29
- TOTAL	533	20.7	212	22 2	745	21 1

The 734 telephone interviews took on average just under six minutes to complete (Respondents were not asked to record how long it took them to fill in the self-completion version)

Serial numbers

Respondents have the same (four-digit) serial number in 1993 as in 1992, and this is the case for all rounds of *BEPS* Data from successive waves can thus be merged by serial number

Weighting

As noted above, *all* (and not just a proportion) of respondents included in the 1992 Scottish booster sample were contacted again in 1993 (and in all subsequent rounds of *BEPS*). Users of the *BEPS* datasets must therefore use the weighting variable *WtFactor* to down-weight the Scottish over-sample and so recreate a *British* sample. Note that this weighting factor was designed to weight the number of respondents in each Standard Region in the 1992 survey to the proportions of registered electors in each Region in 1992. No additional weighting scheme has so far been devised to address the problem of differential attrition in the panel over the years

Variable names

Variable names consist of two components a descriptive mnemonic followed by a number indicating the wave of the panel study (1 in 1992, 2 in 1993, and so on). Only questions with identical or functionally equivalent wording in successive waves of the study are given comparable variable names.

3. June 1994 *BEPS* study

Introduction

Funding for the Centre for Research into Elections and Social Trends (CREST) was not in place until the official start of the new Centre's programme in October 1994. However, the opportunity to re-interview panel members immediately after the European Parliament elections on 9th June that year was irresistible. So a 'bridging grant' was requested from the ESRC to cover the gap (at least in part) between the demise of JUSST at the end of March, 1994 and the beginning of October. This application was successful, and it was possible to re-contact in person respondents who had last been interviewed face-to-face two years earlier.

The sample

Out of a baseline sample of 3,534 electors interviewed in 1992, the names of 3,145 were issued to interviewers in June 1994. Withdrawn from the sample were three categories of respondent who it was either impossible, or judged inappropriate, to visit again

- Those we had been unable to trace in 1993 [n= 144]
- Those found to ineligible (emigrated or died) [n= 24]
- Those who had in 1993 refused (on the telephone) to be interviewed [=xx], or who had contacted the office after receiving a postal questionnaire and asked not to be re-approached [n= 221]

So the total eliminated from the sample by the 1994 wave of interviewing was 389

As in 1993, the sample was divided into 'Types', so that interviewers could vary their doorstep introductions as appropriate These were

Sample Type

- A In 1992 agreed to be re-interviewed, and took part in BEPS 1993, either by post or by telephone (n= 2,562)
- B In 1992 agreed to be re-interviewed but did not reply in 1993 (even after attempts to contact them *via* any 'stable address' given (n= 270)
 - In 1992 was unwilling to be re-interviewed in future rounds, but took part in *BEPS* in 1993, and did <u>not</u> ask to have their name removed from the panel list (n= 197)
 - In 1992 was unwilling to be re-interviewed in future rounds, was written to 1993, but we heard nothing from them (n= 116)

In addition, everyone in the sample was sent a letter a few days before fieldwork was scheduled to begin. The wording of the letter differed slightly according to sample type. Most importantly, electors in Sample Type D were invited to 'opt in' to the survey by notifying the office that they were willing to take part again. Unsurprisingly, only very few of these respondents (3 out of 116) were successfully interviewed.

The 'advance letter', as expected, generated some calls to the office, and relevant information such as new addresses, deaths and so on was passed to interviewers. Some former respondents wrote to or telephoned the office, asking for their names to be withdrawn from the sample. Their names were removed from the panel list

Fieldwork

A small-scale pilot was carried out between 5th and 11th May 1994 Four interviewers between them carried out 37 interviews, selected by 'quota' sampling methods, with controls by gender, age and social class. Afterwards the interviewers attended a debriefing, to discuss the pilot results with members of the research team.

On the main survey, panel members' names and addresses were issued on documents called Address Record Forms (ARFs) Where a stable address had been provided, this was also included. If the interviewer failed to get a reply or the respondent's address, or if a new household had move in and no forwarding address was available, the interviewer was allowed to visit the stable address in an attempt to trace the respondent.

As in 1992, interviewers undertaking assignments on the main fieldwork phase were personally briefed by SCPR members of the *BGES* research team. Fieldwork began on Monday June 13th, the day after the results of the European Parliament elections had been announced¹³. A total of 172 interviewers undertook assignments

Interviewers were instructed to call at panel members' addresses at least four times, with calls spread out over different times of day, in their attempts to find respondents at home. In practice, many more calls than the minimum number were made. Only after repeated personal visits was contact by telephone allowed.

As in 1992, there was a 're-issue' phase, at which the names of elusive and initially reluctant respondents, and those who had moved out of the original interviewer's area, were assigned to other interviewers. A total of 477 addresses were re-issued and interviews were successfully carried out at 124 (26 per cent) of them. The re-issue phase raised response by five per cent. Of the 2,277 face-to-face interviews achieved, xxxx (xx per cent) were carried out by the end of June 1994 and xxxx (xx per cent) by the end of July. A further XX interviews were achieved in August, almost all on the re-issue phase. Bridget - could you supply these figures?)

Response and attrition

At some addresses, even after repeated attempts, the interviewer failed to contact a panel member in person. If the interviewer knew, or had good reason to suppose, that the premises were occupied that case was passed to SCPR's Telephone Unit and an attempt was made to achieve a partial interview with that person. Out of 52 electors whose names were passed to the Unit, ten were interviewed¹⁴ Response figures are as follows

Most interviewers had been briefed during the preceding week. However, we were anxious about the so-called bandwagon' effect on responses to the questions on voting behaviour, and so insisted that all respondents should be interviewed after the results had been announced.

¹⁴ Since neither the 'scales booklet' nor the self-completion questionnaire could be administered over the telephone, these interviews had to be classified as 'partial'

	No
Issued	52

- TOTAL	631	27 2	212	25 8	843	26 8

Full details are shown on Table 2 (Panel Attrition by Spring 1994)

Average face-to-face interview length was 45 minutes

Serial numbers

Respondents have the same (four-digit) serial number in 1994 as in 1993 and in 1992, even though they might have moved since their first interview. So data from successive waves can be merged by serial number

Weighting

As already noted, all (and not just a proportion) of respondents included in the 1992 Scottish booster sample were contacted again in 1993 and 1994 (and in all subsequent rounds of BEPS). Users of the BEPS datasets must therefore use the weighting variable WtFactor to down-weight the Scottish over-sample and so recreate a British sample. Note that this weighting factor was designed to weight the number of respondents in each Standard Region in the 1992 survey to the proportions of registered electors in each Region in 1992. No additional weighting scheme has so far been devised to address the problem of differential attrition in the panel over the years.

Variable names

Variable names consist of two components a descriptive mnemonic followed by a number indicating the wave of the panel study (1 in 1992, 2 in 1993, 3 in 1994 and so on). Only questions with identical or functionally equivalent wording in successive waves of the study are given comparable variable names (Is this right?)

6. May 1995 BEPS study

Introduction

As on the first *BEPS* study in 1993, fieldwork was scheduled to begin immediately after the May local council elections in England and Wales, in 1995 held on May 4th¹⁵ Not all respondents had the opportunity to vote, of course, but for those with local elections in their

¹⁵ Unfortunately from BEPS point of view, in 1995 the local elections in Scotland were held a month earlier, on April 6th

area the timing of the survey maximised the chance of respondents remembering whether or not they had voted, and (if they had) the party for which they had cast their ballot

The sample

Out of a baseline sample of 3,534 electors interviewed in 1992, a total of 2,905 (82.2 per cent) were judged worthwhile to contact again, with some prospect of achieving successful interviews. The 629 electors whose names were *not* issued to interviewers in May 1995 fell into these four categories

- Those found to be no longer eligible (emigrated or died) [n= 62]
- Those we had been unable to trace in 1993 or 1994 [n= 285]
- Those who had in 1993 refused (on the telephone) to be interviewed, or who had contacted the office after receiving a postal questionnaire and asked not to be reapproached [n= 238]
- Those who were contacted in 1994 but, for various reasons such as chronic incapacity, were not thought suitable for continued panel membership [n = 44]

As in earlier years, the sample was divided into 'Types' (this time four). But in contrast to the 1994 round of fieldwork, some panel members were assigned initially to the Telephone Unit rather than being issued straightaway for face-to-face interview. The four Sample Types were as follows

Issued for face-to-face interview

Sample Type 1 Interviewed in 1994, and stated their willingness (in principle, at least) to take part again [n = 2,111]

Sample Type 2 Not contacted in 1994, or temporarily unavailable for interview [n = 114]

Issued for initial telephone contact

Sample Type 3 Interviewed in 1994 but, when asked, said that they would rather we did not contact them again, or did not answer this question [n = 169]

Sample Type 4 Agreed to re-interview, following the 1992 survey, but refused in either 1993 or 1994 [n = 511]

Thus a total of 2,228 cases were issued to the interviewers carrying out face-to-face interviewing assignments, and 677 cases were issued in the first instance to the Telephone Unit

Face-to-face interview phase

Advance letter

Everyone in the face-to-face interview sample (Sample Types 1 and 2) was sent a letter a few days before fieldwork was scheduled to begin. The 'advance letter', as in earlier rounds, generated some calls to the office, and relevant information such as new addresses, deaths and so on was passed to interviewers. Some former respondents wrote to or telephoned the office, asking for their names to be withdrawn from the sample. Their names were removed from the panel list.

Pılot

A small-scale pilot was carried out in April 1995 to test the small number of new questions being introduced to the survey series (on the images of the leaders of the main political parties and some extra items in the classification section). The two pilot interviewers between them carried out 30 interviews, respondents being selected by 'quota' sampling methods. Fieldwork took place between 29th March and 3rd April. On 4th April the interviewers attended a debriefing and discussed the pilot results with members of the research team.

Main fieldwork

On the main survey, panel members' names and addresses were as before issued on documents called Address Record Forms (ARFs) Initial contact had to be by personal visit, except in remote areas of northern and western Scotland where first contact by 'phone was encouraged to reduce the risk of wasted journeys Where a stable address had been provided, this was also included. If the interviewer failed to get a reply or the respondent's address, or if a new household had moved in and no forwarding address was available, the interviewer was allowed to visit the stable address in an attempt to trace the respondent

As in previous years, interviewers undertaking assignments on the main fieldwork phase were personally briefed by SCPR members of the *BEPS* research team Fieldwork began on Friday May 5th, the day after the local elections in England and Wales¹⁶ A total of 149 interviewers undertook assignments

Interviewers were instructed to call at panel members' addresses at least four times, and spread out over different times of day, in their attempts to find them at home. In practice, many more calls than the minimum number were made. Only after repeated personal visits was contact by telephone allowed.

Again there was a 're-issue' phase, at which the names of elusive and initially reluctant respondents, and those who had moved out of the original interviewer's area, were assigned to other interviewers. In all 284 addresses were re-issued, and at 86 (30 per cent) of these successful interviews were carried out. Re-issuing raised the net response rate by four per cent. The great majority of interviews were carried out by the end of May 1995. (Bridget ould you run the data by month of interview so we can be more precise?) Of the 1,843 (check!) face-to-face interviews achieved, xxxx (xx per cent) were carried out by the end of

Most interviewers had been briefed during the week of the elections. However, we were anxious about the so-called 'bandwagon' effect on responses to the questions on voting behaviour, and so insisted that all respondents should be interviewed after most of the results had been declared.

May 1995 and xxxx (xx per cent) by the end of June A further xx interviews were achieved in after this, during the re-issue phase

Average interview length was 45 minutes (check!)

Telephone interview phase

The main task of the Telephone Unit was to persuade as many electors as possible in Sample Types 3 and 4 to agree to a face-to-face interview. But if the telephone interviewer established that the sample member would *not* agree to a face-to-face interview, an interview could - if the respondent was willing - be carried out on the 'phone. The preference was, of course, for a face-to-face interview a telephone interview could be only partially completed, since the 'scales questions' and the self-completion questionnaire could not be administered over the 'phone.

The procedures adopted by the Telephone Unit were these

- For members of Sample Types 3 and 4 if the sample member agreed to an interview, the field interviewer was sent details on a *green* Address Record Form (ARF), together with an introductory letter D to show on the doorstep, along with any information given by the respondent about his or her availability
- For members of Sample Type 3 if the sample member did not have a correct telephone number, no further attempt was made to interview him or her
- For members of Sample Type 4 attempts were made to trace any incorrect 'phone numbers, but if that failed, the field interviewer was sent details of that person on a red Address Record Form, and the panel member was sent an advance letter C hogh the post

Any stable address and telephone number information volunteered by the respondent in earlier rounds was also on the ARF and could be used to try to trace panel members, if other methods failed

Response and attrition

Summary response figures, broken down by Sample Type, are shown in the next table

	A		В		Sample Type C		D		Total

Serial numbers

Respondents have the same (four-digit) serial number in 1994 as in 1993 and in 1992, even though they might have moved since their first interview. So data from successive waves can be merged by serial number.

Weighting

As already noted, all (and not just a proportion) of respondents included in the 1992 Scottish booster sample were contacted again in 1993 and 1994 (and in all subsequent rounds of BEPS). Users of the BEPS datasets must therefore use the weighting variable WtFactor to down-weight the Scottish over-sample and so recreate a British sample. Note that this weighting factor was designed to weight the number of respondents in each Standard Region in the 1992 survey to the proportions of registered electors in each Region in 1992. No additional weighting scheme has so far been devised to address the problem of differential attrition in the panel over the years

Variable names

Variable names consist of two components a descriptive mnemonic followed by a number indicating the wave of the panel study (1 in 1992, 2 in 1993, 3 in 1994 and so on - check!) Only questions with identical or functionally equivalent wording in successive waves of the study are given comparable variable names

4 October 1995 BEPS study

Introduction

After summer 1995, BEPS surveys were scheduled to take place not annually as before, but every six months, leading up to the next general election. In earlier rounds the timing of the local council and European elections had dictated the timetable, since the CREST team were anxious to explore not only attitudes, but also voting behaviour. There was no comparable constraint upon the timing of the autumn rounds. There is some evidence, however, that the salience of party confrontation can encourage response to surveys on party politics, [is this so?]. So it was decided to put the autumn 1995 wave into the field immediately after the close of the then-current party conference season.

For reasons of economy, and to preserve the panel, it was decided to field only a very short questionnaire to be answered over the telephone or, if that method failed, to send panel members a functionally equivalent questionnaire through the post. The relatively small number of respondents who were not on the telephone were, at the outset of fieldwork, sent a questionnaire through the post.

The sample

By the time that the October 1995 fieldwork round approached, the 1992 baseline sample of 3,534 electors had diminished to 2,378 whose names could, in the research team's judgement, be kept in the sample with some prospect of a successful outcome. In the event, the names of 2,147 sample members were issued for initial contact by telephone and 230 for initial contact by post. Those who we failed to contact on the telephone, or who said that they would prefer to fill in a questionnaire themselves, were later added to the postal sample

As in earlier fieldwork rounds, panel members were divided into 'Sample Types', on the basis of their status on earlier rounds of *BEPS*. This time there were five. The first three had telephone numbers and their names were issued to the Telephone Unit, and the last two were not on the telephone (or did not divulge their number) were sent a self-completion questionnaire

Sample Type

Status

- 1. On the 'phone and interviewed in spring 1995
- 2 On the 'phone and not contacted in spring 1995
- 3 On the 'phone but refused in spring 1995, but did not indicate that they did not want to be contacted again
- 4. No available tel no but interviewed in spring 1995
- 5 No available tel no and refused or were not contacted in spring 1995

Again, interviewers from the Telephone Unit tried to find the new address of any respondent who had moved, or (failing that) attempted to make contact with someone at the stable address, if one had been provided

Fieldwork

All interviewers in the Telephone Unit were personally briefed by members of the SCPR research team in three sessions in the afternoon of Friday 13th October, just after the last speech at the last of the 1995 party conferences. Interviewing began immediately after that, and the researchers stayed to listen to some of the early interviews to check that there were no problems with the questionnaire.

A total of xx interviewers undertook assignments, each carrying out a total of xx interviews. Of the 1,767 successfully achieved, xxxx were conducted by Sunday 15th October, and a further xxx within one week of the briefing. The remaining xxx were carried out between 20th October and the 'cut-off day' for the telephone interviewing phase (November 7th). Bridget - please fill in the gaps if you can

As noted, 230 respondents could not be included in the telephone sample, as they were either not on the 'phone, or were ex-directory or had not disclosed their number. These were classified as belonging to *Phase 1* of the postal sample. Early non-contacts from the telephone sample, and those who asked for a postal questionnaire, comprised *Phase 2* of the postal sample. In the course of fieldwork, *Phase 3* was added, comprising those respondents whom telephone interviewers were still trying to contant between the original telephone interview 'cut-of' date of 24th October and the revised 'cut-off' date of 7th November

Response and attrition

Of the 2,147 panel members whose names were issued to interviewers in the Telephone Unit, 1,767 were successfully interviewed, a gross response rate of 83 3 per cent. Of the 230 panel members without a telephone who were sent a self-completion questionnaire, 111 returned it completed, a gross response rate of 48 3 per cent.

Response to the postal component of the autumn 1995 round of the survey varied, as expected, quite considerably, as the following table shows

Summary response figures, broken down by Sample Type, are shown in the next table

	1/4		2		Sampl 3	е Туре	5		Total	
	No	%	No	%	No	%	No.	%	No	%

Full details are shown on Table 4 (Attrition by October 1995)

Serial numbers

Respondents have the same (four-digit) serial number in this round of *BEPS* as in the earlier rounds, even though they might have moved since their first interview. So data from successive waves can be merged by serial number

Weighting

As already noted, all (and not just a proportion of) respondents included in the 1992 Scottish booster sample were contacted again in all subsequent rounds of BEPS). Users of the BEPS datasets must therefore use the weighting variable WtFactor to down-weight the Scottish oversample and so recreate a British sample. Note that this weighting factor was designed to weight the number of respondents in each Standard Region in the 1992 survey to the proportions of registered electors in each Region in 1992. No additional weighting scheme has so far been devised to address the problem of differential attrition in the panel over the years.

Variable names

Variable names consist of two components a descriptive mnemonic followed by a number indicating the wave of the panel study (1 in 1992, 2 in 1993, 3 in 1994 [what about the two rounds in 1995?] and so on Only questions with identical or functionally equivalent wording in successive waves of the study have been given comparable variable names

ANNEX I

The 1992 Panel Surveys

1. Introduction

Respondents to the 1987 BGES Cross-section survey provided the sample for the 1992 Panel surveys. The aim was to interview as many of them as could be traced¹⁷, once by telephone during the election campaign (that is, between 19 March and 8 April inclusive), again by telephone in the days immediately after the election (10 to 14 April inclusive), and finally face-to-face in the weeks following the election

2 Tracing panel members

Of the 3,826 respondents to the 1987 survey, 363 said they were unwilling to be reinterviewed and so were excluded from the 1992 Panel survey. Attempts were made to trace all the remaining 3,463 respondents. There were four tracing stages. The **first stage** took place over May and June 1991, when respondents were sent a letter and form asking whether or not they would be willing to be re-interviewed at the time of the forthcoming general election, and checking their current address and telephone number. The form provided space for those who had moved since 1987 to enter their new address, or a new contact address

The **second stage** of the exercise took place over June and July 1991 when those from whom we had received no reply were sent a 'reminder' letter and form. Those for whom we had been given a new address or new contact address at stage 1 of the tracing exercise, or where a contact address had been supplied in 1987, were also sent forms

At the **third stage** those respondents from whom a reply still had not been received were telephoned over October and November 1991. If a telephone number had not been provided, we endeavoured to trace it. Finally, at the **fourth stage** in February 1992, all respondents who we had succeeded in contacting over the first three stages were sent a postcard in order to maintain contact and to check for any recent changes of address

As a result of this exercise, the names of 1,631 respondents with known telephone numbers were issued for the telephone campaign and post-election survey waves, and 2,062 (including those without telephones, or whose 'phone numbers we could not trace, remained in the sample for a face-to-face interview after the general election

¹⁷ Unfortunately funding was not available to mount a panel study following the 1987 general election, so it was not possible to keep in touch with panel members until funding was in place in 1991 for the panel study the following year

3 The campaign and post-election telephone surveys

The campaign survey

A small-scale pre-test of the campaign survey of the questionnaire was carried out in December 1991. Five interviewers working at SCPR's Telephone Interview Unit carried out a total of 32 interviews among a sample of respondents to the 1991 British Social Attitudes survey. As a result, the questionnaire was shortened considerably to meet its target length of around six minutes.

The election was called on Wednesday 11 March The campaign survey began on Thursday 19 March and continued until Wednesday 8 April, the day before polling day, giving three full weeks of interviewing (excluding Sundays) Fieldwork was carried out by members of the Telephone Unit by 12 trained SCPR interviewers. Each panel member was allocated to one of the eighteen interviewing days, the 1st, 19th, 37th etc. person being allocated to Day 1, the 2nd, 20th, 38th etc. person to Day 2 and so on. In practice, numbers for each day were made up from subsequent days' batches to compensate for respondents who were unavailable or unwilling to be interviewed on their allocated day. In addition, interviewers continued throughout the fieldwork period to try to contact and interview those individuals not contacted on their allocated day.

An average of 74 interviews was carried out each day. The gross response rate for the campaign survey was 81 per cent (n = 1323), and the net response rate was 89 per cent

The post-election study

The 1,323 respondents who had been successfully interviewed in the campaign survey were telephoned again after the election and asked to give a further (2-3 minute) interview. A total of 1,203 interviews was achieved, representing 96 per cent of the issued sample. The aim was to conduct interviews immediately after the election. In the event, most of the interviewing (80 per cent) was carried out on Friday 10 April, the day following the election. Fourteen per cent of respondents were interviewed on the second day after the election, with the remaining 6 per cent of interviews taking place between 12th and 14th April

¹⁸ With the exception of 71 cases not issued for post-election interview due to an administrative error

BGES 1992 Panel Telephone surveys: response summary

Campaign survey	n	%	%
Names issued	1631	100	
Found to be out of scope			
- telephone number unobtainable	84	5	
- moved and could not be traced	52	3	
- died	7	*	
- emigrated	3	*	
Total out of scope	146	9	
Total in scope	1485	91	100

4. The panel face-to-face interview survey

The largest possible number of panel members (2,062) was approached for a face-to-face interview after the election. This included all those already interviewed by telephone, those who had been approached but who had declined to participate in the telephone interview, those who responded positively to the tracing exercise but for whom we had no telephone number, and those from whom we had no reply during the tracing exercise.

Main fieldwork was preceded by a small-scale pilot, carried out in December 1991 (see **Section x.x** above) This was used to test not only new questions asked in the Cross-section survey, but also certain aspects of the panel survey - in particular, the 'life-history' questions

Interviewers were drawn from SCPR's trained fieldforce, and were briefed by members of the SCPR research team. Since the great majority of interviewers had also been allocated addresses on the cross-section sample, both elements of the survey were briefed at the same time. A total of 192 interviewers carried out face-to-face interviews with panel members.

Interviewing began on 13 April 1992 (by which time virtually all the telephone interviewing had been completed), and 96 per cent of interviews took place before the end of May, the last interview was conducted on 7 August Interviewers were instructed to call at panel members' addresses at least four times, and spread out over different times of day, in their attempts to find them at home. In practice, many more calls than the minimum number were made. Only after repeated personal visits was contact by telephone allowed.

The face-to-face interview lasted on average between 55 and 56 minutes. Panel members who had agreed to a face-to-face interview were also asked to fill in a short self-completion supplement, over 97 per cent of them did so

As in the cross-section survey, respondents either gave the supplement to the interviewer to return to the office, or returned it themselves in the pre-paid, pre-addressed envelope provided Respondents to the face-to-face interview who did not fill in a self-completion supplement appear as missing on the relevant variables in the SPSS-x system file (as for the cross-section survey)

A total of 1,608 panel members were interviewed face-to-face, and 1,565 of these returned a self-completion questionnaire. The names of some potential respondents who were proving elusive, or (less frequently) reluctant to be interviewed, were reissued during the final weeks of fieldwork. The reissue phase resulted in 56 productive interviews and raised response by 3.2 per cent. The final response rate achieved was 87 per cent net and 78 per cent gross.

The full response breakdown is as follows

BGES Panel face-to-face survey. response summary

		n	%	%
Name	s issued	2062	100	
	Untraceable respondents			
	- address empty, demolished, not traced	25	1	
	Respondents no longer eligible			
	- moved to unknown address	160	8	
	- died	22	I	
	- emigrated	10	*	
	Total untraceable or ineligible	217	11	
	Total in scope	1845	89	100
	Interview obtained	1608	78	87
	of which			
	- with self-completion questionnaire	1565	76	85
	- without self-completion questionnaire	43	2	2
	Interview not obtained of which	237	11	13
	- refused (incl. broken appointment)	173	8	9
	- not contacted (incl. away)	33	2	2
	- other reason	31	2	2
	= less than 0.5 per cent			

The panel dataset was weighted to compensate to some extent for the effects of differential attrition. The aim was to make the various groups of respondents at the different panel stages representative of the 1987 cross-sectional sample, simply in terms of voting behaviour in the 1987 General Election (as reported in the 1987 cross-section survey)

There are several potential limitations to this policy. One is the necessary assumption underlying the weighting, that people who stayed in the panel are representative of those who did *not*. Even if this assumption is correct, the effectiveness of the weighting will also depend on the strength of the relationship between voting behaviour in 1987, and the panel variables of interest

The merged 1987/92 SPSS-x system file now consists of a 5-Wave panel

Wave 1	n=3,826	1987 cross-section
Wave 2	n=1,323	1992 March/April Stage 1 - election campaign ('phone)
Wave 3	n=1,203	1992 April Stage 2 - post-election ('phone)
Wave 4	n=1,608	1992 April/May/June Stage 3 - face-to-face
Wave 5	n=1,564	1992 Aprıl/May/June self-completion supplement

The principle employed is that the weight allocated depends on the particular group of cases of interest to data analysts. These have been identified as members of

Waves 1 and 2 Waves 1, 2 and 3 Waves 1, 2, 3 and 4 Waves 1, 2, 3, 4 and 5 Waves 1 and 4 Waves 1,4 and 5

Weights for these six groups have been added to the SPSS-x system file, and are named Wt12, Wt123, Wt1234, Wt12345, Wt14 and Wt145 There are, of course, several other permutations of membership of the different panel Waves Rather than construct weights for each one on the SPSS-x system file, it is left for researchers to construct these weights themselves

Note that the 1987 cross-section dataset should itself be weighted, to offset differential levels of response between Standard Regions. This weight is already incorporated into the four weights named above. If data from 1987 are used alone, they must be weighted using the variable *Weight*. The weighting for 1987 must also be incorporated into any additional weights constructed by users themselves

As explained, the basic weighting policy has been to use the voting profile of respondents interviewed in Wave 1 (1987 post-election survey) as a benchmark. So in analysing the Wave 2 dataset, for example, the distribution of Wave 2 respondents' 1987 vote is adjusted to replicate the distribution in Wave 1

The weighting variable is voting behaviour in 1987 (V8a in the system file) For the weighting, this is re-categorised into a simplified variable, Vote87 The distribution of Vote87 in the 1987 cross-section was

Respondent category	Original codes	New code	n	%
Did not vote/DK if voted	-1,98	-1	536	14,01
Conservative	1	1	1,413	36 93
Labour	2	2	994	25 98
Liberal/SDP	3	3	751	19 63
Other party	5,6,7,8,9	4	44	1 15
Refused to say	97	97	89	2 33
Total			3,826	100 00

Note this is based on the 1987 data weighted to Region

The final column (% distribution) is the numerator used in calculating the weight

The denominator is found from the distribution of this re-coded variable for the panel group of interest. For example, for respondents to Waves 2 and 3, the distribution of *Vote87* was

	n	%
Did not vote/DK if voted	106	8 80
Conservative	479	39 78
Labour	285	23 67
Liberal/SDP	294	24 42
Other party	15	1 25
Refused to say	26	2 16
	1572	100 00

Note this too, is based on the 1987 data weighted to Region

So to calculate the weight, the % column is the denominator - for example, the weight for non-voters is $14\ 01/8\ 80(=1\ 59)$, for Conservatives $36\ 93/39\ 78\ (=O\ 928)$, and so on

To make analysis more straightforward, the cases for which the weight is not applicable - in the above example, cases which are *not* members of Waves 2 and 3 - should be given a zero weight

6. Variable names

Variable names are based on question number in most cases, and consist of question number preceded by a letter

Wave 1 V - 1987 Survey

Wave 2 W - 1992 Campaign telephone interview

Wave 3 X - 1992 Post-election telephone interview

Wave 4 Y - 1992 Post-election face-to-face and self-completion

In the 1987 survey, variables on the self-completion supplement are numbered V101 (thus V101a, V101b V102 and so on)

In Wave 4 (the 1992 face-to-face interview), variables in the classification section at the end are numbered from Y301 (thus Y301a, Y301b, Y302 and so on), variables on the self-completion supplement are numbered from Y201, Y202 and so on

Other variable names, which do not follow the question-number convention - such as occupation and class variables - should be self-explanatory The dataset also contains a small number of derived variables

7 BGES panel datasets and SPSS-x set-up files

The combined 1987/1992 SPSS-x system file contains 1987 data for all cases that were productive in the 1987 survey, and 1992 data for those cases that were productive in at least one stage of the 1992 panel survey Cases have the same serial number in 1992 as in 1987. The panel file contains 3,826 cases¹⁹

¹⁹ There was a self-completion questionnaire on the 1987 survey, which 89 per cent of respondents (n= 1,565) filled in

The numbers issued and productive at each stage were

1987 Face-to-face		6,000	3,826
Self-completion	6,000	3,4	14
1992 Campaign tel	1,631	1,	,323
Post-election tel	1,251	1,20	3
Face-to-face	2,062	1,60	8
Self-completion	2 062	1,5	65

The derived variable *Panel* provides a summary of the stages of the 1992 component of the panel in which respondents participated. The codes and SPSS-x value labels are

Code	SPSS-x value labels	Panel waves
1	Camp,post,f-f,s-c	1,2,3,4,5
2	Camp,post,f-f	1,2,3,4
3	Camp,post	1,2,3
4	Campaign only	1,2
5	Camp,f-f,s-c	1,2,4,5
6	Camp,f-f	1,2,4
7	Post-election only	1,3
8	Post,f-f,s-c	1,3,4,5
9	Post,f-f	1,3,4
10	F-f,s-c	1,4,5
11	Face-to-face only	1,4

8. Other conventions employed

SPSS-x 'missing' cases

The cases of panel members who did not participate at all in a particular wave of the panel surveys (1987 self-completion, 1992 wave 1, 2 or 3 or the self-completion supplement) appear as missing on the relevant variables in the system file, SPSS does not treat them as valid. To exclude them altogether, data users use the *Panel* variable to select only those cases productive in the stages in which they are interested

Skips

At various points in the survey, questions were asked of sub-samples of respondents while others were routed past such questions. On some variables more than one filter operated simultaneously. Cases which were filtered out (or skipped) are defined as -1 (or -2 or -3) and are labelled 'Skipped' with the definition of the skip (insofar as space allows)

'Not answereds'

Where a case was productive at one or more stages of the survey but there are no data on a particular variable (ie, a particular question was not answered) the case is defined as 9 (or 99 or 999 or 9999) on each variable that was 'Not answered'

'Don't knows'

'Don't know' responses are usually coded 8 (or 98 or 998), these should be treated as valid categories

8 Constituency numbers

Thirteen cases are missing all constituency numbers (old and new OPCS, old and new PA), these cases are coded 999 New OPCS constituency numbers are missing for all cases in Scotland (see Section 3 above)
