FAMILY EXPENDITURE SURVEY

INCOME QUESTIONNAIRE

April 2000 - March 2001

Using this documentation

In April 1994, the Family Expenditure Survey moved from a paper questionnaire to using Computer Assisted Interviewing (CAI). CAI allows interviewers to enter answers directly into the computer during the interview, saving a great deal of time and reducing inputting errors. But because all of the questions are contained within the computer, no paper version of the questionnaire in the traditional sense actually exists. Therefore, this paper document has been produced for reference purposes. It is based on a listing of the CAI instrument.

Questionnaire structure

Sections/ Topics
The questionnaire is divided into sections which follow the main topics. A description of the topic covered by subsequent questions is given at the top of each questionnaire page.

The routing to each section is stated at the start of the section. This defines to which subsample of individuals the questions in that section apply.

Questions
Each question is laid out in the following way:

      [question number]   [question name]
                        [routing - subsample to whom it applies]

                        [**text seen by interviewer on screen**]
                        [range of permitted answers; omission means text entered]

The question name is made up the following way:

      [BLAISE BLOCK NAME].[BLAISE variable name] [**FES variable name**]

where:

•   The ***FES variable name*** (printed in bold) is the name a variable has within the FES dataset.

•   The ***BLAISE BLOCK NAME*** and ***BLAISE variable name*** are used within the BLAISE instrument and are not of use to FES dataset users.

If the FES variable name and the BLAISE variable name are the same, the brackets that usually contain the FES variable name instead contain an asterisk (*) and the BLAISE name is printed in bold:
e.g.   QTGovSch.**ProgType (*)**

Routeing

At each question, a description is given of the sub-sample to whom it applies. If the routeing is taken from another question which can be seen nearby, the CAI name of the question is used for reference. Otherwise an English description of the sub-sample is given; where this is not as precise as the CAI description would be, reference is made to the relevant question and code(s).

Finding the location of a variable within the questionnaire

The index at the back is ordered by FES variable name. Therefore, if the FES variable name is known, the relevant question from which it is obtained can be identified.

Finding the answers to a question within the dataset

Using the FES variable name in combination with the FES table name, the variable can be located within the FES dataset. The respective FES table name is shown at the top of each questionnaire page and at the point at which the table changes (i.e. an FES table name relates to all of the questions following it until a new table name is given.

Edit only, derived and system variables

Variables seen only by office editors, and hidden derived variables, are designated by ##.
Derived variables are named DV. There are a number of SYSTEM VARIABLES which are included in this documentation for completeness only.
