BT HOME ONLINE SURVEY: WAVE-ONE DOCUMENTATION

The surveys

Home OnLine (HoL) is funded by British Telecommunication Ltd (BT). It consists of three annual waves of household data. The first wave was conducted between October and December (inclusive)1998, the second wave began fifteen months later in January 2000 and the third roughly one year after this in February 2001.   Fieldwork for waves two and three was considerably extended to maximise the possibility of tracing movers.

The original sample was selected using a qualified form of randomisation which ensures inclusion of geographically clustered areas with representation of different social strata close to that of the population. Selection of households was random within these. There were two important exceptions to this. First, BT required overrepresentation of homes with a PC. The selection process ensured that the sample contained 50% of homes with a PC. Weights have been included in the dataset to reproduce the expected sample withoutPC overpresentation. Second, household attrition was compensated in wave two through selection of new households to maintain the original household sample size. These were, however, randomly selected out of the same pool of homes used to provide the original sample, and each sampling unit gained the same number of homes that it lost through attrition (with the exception of a small number where locations were too distant for interviewing).

The survey is of all adult individuals (aged 16 or over) in selected households. In waves two and three any individuals who moved, whether with an original household or alone, remained in the sample, and any new household members, as well as household members just turned age 16, were included.   Efforts were made to trace all movers though moves out of the country or into institutions were defined as out of scope. Efforts were also made to convert refusals.

Interviews were conducted face to face in wave 1 and by telephone in waves 2 and 3. Replacement households in wave two were interviewed face to face. In addition, in all waves interviewed respondents were provided with a weeklong diary in which to record what they were doing each day of that week every quarter hour of that day. The activities recorded were determined in advance and included usage of various information and communications technologies (ICTs). A somewhat simplified diary (fewer activities) was given to children in sample homes aged 9 to 15 inclusive. Diaries were returned by post and in return respondents received a gift voucher.

Sample and response rates

The original sample comprised 1000 households. This was maintained in wave two through the replacement strategy. The household response rates for each wave were as follows:

	%
Wave 1	57.0
Wave 2	75.7 (after replacement, excluding non-response replacement homes)
Wave 3	67.1

Replacements formed 29.5% of homes in wave 2.

Not all eligible household members were interviewed, either as a result of non-contact or refusal. Within-household response rates were:

	%
Wave 1	82.6
Wave 2	86.6
Wave 3	79.7

The final sample of individuals, including children, is given in the following table.

	Wave 1	**Wave 2**	**Wave 3**
Undefined		6	10
Survey plus diary	1093	649	723
Survey only	668	918	840
Non-response	273	391	321
Children's diary	163	82	73
No children's diary	125	220	208
Child under 9	286	289	231
Total sample size	*2608*	*2555*	*2406*

The longitudinal result is given below for number of waves interviewed and number of waves for which a diary was completed:

	Interviews	**Diaries**
(Always a child)	(697)	(697)
Never	462	1415
Wave 1 only	511	480
Wave 2 only	136	106
Wave 3 only	197	214
Waves 1 and 2	224	172
Waves 2 and 3	365	68
Waves 1 and 3	159	138
Waves 1, 2 and 3	842	303
Total sample	*3593*	*3593*

The dataset

File structure

The original data have been reconstructed into "flat" files which remove the hierarchy between household and individual levels, so that each interviewed individual has household data attached. The data are therefore at the individual level. Each line of data carries a household identifier, an individual identifier, all information from the household questionnaire, information about the relationship of that individual to others in the household (from the household grid) along with age and gender, the data from the individual interview, plus the diary data.

All files and all variables are preceded by a letter denoting the wave: a=wave1, b=wave 2, c=wave 3. In the documentation this prefix is represented by w to denote any wave.

The original data were reconstructed via several files (whose programmes are included in another part of the HoL documentation and described below). These are:

(w)quvar.sps   *Produces variable labels*
(w)totvar.sps   *Produces derived variables*
(w)fam.sps   *Produces response variable and family relationships*
(w)diary.sps   *Converts diary data from time slots to activities*
(w)kdiary.sps   *The same for the children's diary*
(w)weight.sps   *Produces weights*
(w)final.sps   *Combines the above*

Each of the above produces a file with the same name but with the suffix *.sav*, ie a standard spss save file. The final data files for each wave are therefore *(w)final.sav*. The original adult diary data based on quarter-hour slots rather than on activities are included as separate (and very large) data files: *(w)dyslots.sav*.

An additional file can be used to identify respondents by the number of waves in which they participated. This is *xfile.sav*, created by *xfile.sps*.

Identifiers

The identifiers are:

(w)hhid   identifies the household in a single wave
(w)pno   identifies the individual within households in a single wave
pid   identifies an individual across waves

pid is therefore the only longitudinal key and this has to be used to link individuals across waves.

Intermediate files

A summary description of the main intermediate files is given below.

(w)quvar.sps

This combines the original files *(w)hhresp.sav*, *(w)indresp.sav*, *(w)indall.sav*, and coded data in *(w)codes.sav* (wave 1 only). It converts the original variables names into mnemonically more useful ones, adds variables labels, and turn some alphanumeric into numeric.

(w)totvar.sps

This takes *aquvar.sav* and creates a number of additional variables. The following lists those provided in wave 1, many of which also appear in waves two and three, while neither of these waves produces many new derived variables (while wave three was almost the same as wave two):

from the household questionnaire
agoods   number of consumer durables in the home (maximum six)
atvdist1   location of TV in home where only one
atvdist2   location of TVs where there are two
atvdist3   location of TVs where there are three
atvdist4   location of TVs where there are four or more
acabsat   access to cable and/or satellite
apcdist1   location of PC in home where only one
apcdist2   location of PCs where there are two
apcdist3   location of PCs where there are three or more
atldist1   location of phone in home where only one
atldist2   location of phones where there are two
atldist3   location of phones where there are three or more
aphbill   quarterly phone bill (including quarterly charge)

from the individual questionnaire
apaptyp   type of newspaper read (quality, tabloid etc)
totfunhi   number of leisure activities (aleisure a-g) done weekly or more
totfunlo   number of leisure activities (aleisure a-g) done yearly or less
totouthi   number of outdoor activities (aleisure a-e) done weekly or more
totoutlo   number of outdoor activities (aleisure a-e) done yearly or less
totinhi   number of indoor activities (aleisure f-g) done weekly or more
totinlo   number of indoor activities (aleisure f-g) done yearly or less

Number of local and non-local friends and relatives have been recoded so that all responses are in ranges (ie alclfndr anlclfdr alclrelr anlclrlr).

hivisit   number of personal contacts weekly or more
midvisit   number of personal contacts between weekly and yearly
lovisit   number of personal contacts yearly or less

hi,mid,lopost   as above for postal contact
hiphone etc   as above for phone contact

apcget   recoded into three categories
apcgety   number of reasons (maximum nine) for wanting a pc for own use

The questions asking about first, second (etc) pc in the home which the respondent uses (does it have a modem, net link etc) have been simplified to refer to only or first mentioned pc. The new variables have differing numbers of responses, and are:

agetpc   who got pc
apcnew   is it a replacement
apcbuy   year acquired
apcopsy   operating system
apctype   type
alaptop   is it a laptop
amodem   modem link?
anet   internet link?
agetnet   thinking of linking to internet?
aisp   net provider

apcuse a-h   uses made of pc (likewise refer to only or first mentioned)

Respondents are asked if they use a pc at home, but some have none, while a pc might exist in the home in cases where the respondent was not interviewed. This variable has therefore been recoded as follows:

acompuse   no pc in home/pc user/not pc user/pc in home, individual non-response

Net and modem connections (*apcnet* and *apcmod* respectively) have been similarly coded, but non-response is included coded zero ('no home pc').

Number of email contacts has been recoded into ranges.

awwwusey   number of uses made of web (upto 13)
awwwshop   whether has used web commercially (eg home shopping)
awwweduc   has used for education
awwwjob   has used for work
awwwfun   for leisure
awwwinfo   for information

awshophi   number of commercial functions done at least weekly
aweduchi   number education uses at least weekly
awjobhi   work uses at least weekly
awfunhi   leisure uses at least weekly
awinfohi   information at least weekly
awwwushi   number of web tasks done at least weekly

asoftn   number of software packages on pc

apcupgdn	number of upgrades considered
atecphob	a technophobia scale based on the four items testing attitudes to computers, where a higher score means more technophobic
ajobtop	a combination of several indicators of autonomy and responsibility at work, covering management/supervision/self-employment/ simple employee status, plus job permanence, and whether the respondent sets own work schedule
awkhome	frequency of work at home evenings and weekends (combining *awkeve* and *awkwkend*)
awkpchi	number of pc tasks done most days at work
awkpcmid	number done occasionally
ajpcsec	secretarial (word-processing/spreadsheet) pc tasks done most days
ajpcshop	retail tasks (stock control) on pc most days at work
ajpcart	design/graphics most days
ajpcprog	programming or analysis
agmonpay	gross monthly pay from work
anmonpay	net monthly pay
aumonpay	net monthly pay, but replaced by usual monthly pay where different
ahiqual	highest qualification (five classes)
atraindy	number of days in year on training
afamlib	scale of family values based on four items (afam1-4), where a high score means conservative
ahhwrksf	number of household tasks (out of four) done mostly by respondent
ahhwrksh	number shared or done by third party
ahhwrkot	number done by partner [all these are asked of couples only]
amobill	quarterly bills for mobile phone
aphonlik	scale of attitudes to the phone based on five items (aphonst1-5), where a high score means negative attitudes

(w)fam.sps

This file establishes variables to describe family structure and, using these plus family labour-market participation, new segmentation variables (largely based on the concept of life-cycle).

As the file is built on family relationships and these data (derived from *(w)hhgrid.sav*) are the most prone to error, checks have been run to elicit some of the main errors. The data were then submitted to lengthy and detailed processes of correction, both

within each wave and across waves. The commonest sorts of problems of a relatively minor nature are the miscoding of age or gender. Major errors occur when the data are given the wrong identifier by the interviewer so that data, or some of the data, are swapped between different household members. Finally, and most intractable, are errors where data are swapped between individuals over time. Most errors have been corrected and with a high level of security, though in some cases an element of reasonable guesswork as to the true state of affairs has been required. Some error remains.

New variables are as follows:

anfam   number of people in household
ankid   number of children aged 0 to 15
an12kid   number of children aged 12 to 15
ancoup   number of partners (ie showing secondary couples)

afam   shows family structure with nine categories, based on size, partners, and children.

afamjob   only for couples: joint labour-market participation

aseg   a combination of family structure and labour-market participation, with 12 categories; code 0 applies where some information is missing

(w)diary.sps

A further file which precedes this takes the raw diary data, which are alphanumeric, to convert to numeric.

The file has seven records (for each individual) for each day of the week. Each day has 96 variables representing every quarter hour in the day, starting at 4am. Each variable has 35 codes for the activities allowed for in the diary. The variables have the same name in each day. The entire data is also doubled in extent through entry of both primary and secondary activities. The file does the following:

1. Creates a variable *daydone* to show which day of the week each record refers to.
2. Variables are created to distinguish primary activities (acprim1 to acprim96) from secondary activities (acsec1 to acsec96).
3. Reduces missing values. Where the daily totals fail to sum to 24 hours, but the missing data is no longer than a quarter of an hour and is between records showing some time use, suggesting a failure to complete the previous entry, the previous entry is extended by a quarter of an hour to fill the gap. Some remaining missing time is recoded to sleep where this is in normal sleeping hours and there are gaps in this period. Cases where more than three quarters of an our remain missing are not rejected but are flagged.
4. Counts quarter-hour slots and recodes into hours for each activity, thus converting variables from 96 time-slots to 35 activities.

5. Creates new variables summing daily time on each primary and secondary activity into weekly time.

The final file contains the following sets of variables:

(w)wkpri1 to (w)wkpri35   weekly time spent on primary activities
(w)wksec1 to (w)wksec35   weekly time spent on secondary activities

Equivalent variables are provided for each day of the week, with an easily identifiable file name.

(w)weight.sps

Several weights are included to deal with non-response and with the over-sampling of pc-owners. These are described under the section **methods of analysis**. The weights are derived as follows:

WAVE ONE

Household level response outcome data are aggregated to primary sampling unit (psu) level so that the mean household response rate in each psu can be obtained. Unfortunately, there are many blanks in the data for total issued addresses in many psus (though we know how many interviewed homes there are in all psus), so issued totals and the proportion of ineligibles are taken as averages. This gives an estimate of n eligible households per PSUs, where n is independent of PSU. The sequence of steps to produce the final weights were:

1. The household non-response weight is the inverse of the household rate in each psu times the average household response rate.

   $\dfrac{n_i}{m_i} ? \dfrac{m}{n}$ where n_i is the no. of eligible hhds and m_i the no. of responding hhds in

   PSU i, and n and m the corresponding sample totals.

2. The wave-1 sample had 53% homes with a pc, the population had 33% at that time. The pc-bias weight for homes with a pc is 33/53 and for non-pc homes 67/47.

3. The individual non-response weight takes predicted values from a logistic regression with individual response as the outcome, multiplies the inverse of this by both the household response weight and the average within-household response rate (a constant). The logistic regression takes all (eligible) persons within responding homes as the base, with the dependent variable an indicator of whether or not the person themselves responded. For each person, the model estimates

   response propensity, $\hat{p}$ and apply a weight $\dfrac{1}{\hat{p}} ? \dfrac{n_i}{m_i} ? \dfrac{m}{n} ?$ the within household

   response rate.

4. An individual non-response and pc bias weight is calculated as (3) x (2)

5. A diary response weight is calculated liked (3) but with the outcome in the regression as diary response (as a proportion of interviewed individuals). A further weight is produced to take into account the pc bias by replicating step (4).

WAVES TWO and THREE

Replacement makes design weighting impossible, as there is no longer a probability sample. An assumption was made that replacement households were most similar to the households they replaced within psus. The solution chosen, admittedly crude, was to transfer the average wave-one household weight within each psu to replacements within that psu. Subsequent weights took the wave-one household weight as the baseline (thus there are separate weights for all households and then to adjust for the oversampling of PC homes in wave one). The wave-two individual and diary weights were then produced as in wave one. The same was undertaken for wave three, using the wave two household weight as the starting point.

xfile.sps

This has only three variables – xeligibl, xintervu, xdiary – plus *pid*. It is a longitudinal matching file to facilitate the selection of respondents by number of waves eligible, interviewed, or for which they did a diary.

Methods of analysis

Matching procedures

For analysis involving more than one wave, individuals have tobe matched by using *pid*, and the files have to be ordered by that variable. The three main files *(w)final.sav* are already in *pid* order. In spss the procedure is:

match files/file=afinal.sav/file=bfinal.sav/file=cfinal.sav/by pid

This can then be matched with *xfile.sav* in the same way in order to select people by the number of waves they were interviewed or in which they undertook a diary, to produce responses as given in the longitudinal response table above. It also shows how many people were eligible for interview over time.

To match people within households is difficult. The pitfalls are many. The aim is to transfer the data from one line (for instance husbands) to another (wives), and this is far from straightforward. The procedures in spss re either *aggregate* (which only produces sums, differences, means etc for different people grouped by a common identifier) or *lag*. The latter actually transfers the data by one line or more (defined by the length of the lag). It requires considerable care in ordering the people correctly in a file to be able to select the correct lag index, as well as execution of the procedure at

the time of the lag rather than when analysis is done. It is also necessary to change the name of the variables being transferred to ensure this is distinguished from the same variable belonging to the person to whom the data are being transferred. It is vital to produce listings of the variables for each person matched before and after the matching to ensure no errors have occurred. One common form of error, for instance, is to lag people across households, so that data from a person in one is attached to someone in another household.   A safeguard has to be built in. The following lags one variable from husbands/male partners to wives/female partners in wave one, using a variable which indicates the person number of the partner. (This variable is *(w)hgspn*. In a two-person household where, say, the woman is person number one, or *(w)pno*=1, then *(w)hgspn*=2, and vice versa.)

get file=afinal.sav
select if ahgspn >0   [selects partners]
sort by ahhid ahgsex   [orders by household and gender within this]
do if ahgsex=2
compute lhhid=lag(ahhid,1)   [lags household ID and renames variable]
end if
do if lhhid=ahhid   [ensures from the same household]
compute lspn=lag(ahgspn,1)   [lags partners' spouse number and renames]
end if
do if lspn=apno   [ensures correct matching of individuals]
compute lage=lag(aage,1)   [lags age and renames]
[and any other variables]
end if
execute   [vital to do this]
list ahhid ahgsex age lage   [to check correct outcome]
select if ahgsex=2   [retains female partners, with data from partners]

An alternative and preferable procedure specific to the British Household Panel Study, on which HoL is based, uses *(w)hgspn* to match directly without using the *lag* procedure, though this is also not easy. The procedure converts the spouse number to person number so that a partner's data identified by spouse number on one line of data is equated with data on his or her partner's line of data, identified by person number. It is also possible to use the variables *(w)hgmno, (w)hgfno*, which are respectively the person number of natural mothers and fathers in the household for all children of whatever age living with one or both natural parents, to match children with parents. (Dealing with step-children would require the use of the *lag* procedure and a number of relationship variables.) The procedure is demonstrated below:

```
get file=afinal.sav
sel if ahgsex=1
  and ahgspn >0              [selects male partners]
compute aspno=apno          [creates new variable same as person number]
compute amage=aage          [renames variable of interest]
[and any other variables]
sort cases by ahhid aspno    [sorts by household and new ID variable]
save out=men.sav
  /keep ahhid aspno amage    [saves men only with new variables]

get file=afinal.sav          [refresh dataset]
do if ahgsex=2 and
  ahgspn >0                  [create new variable for female partners]
compute aspno=ahgspn         [creates aspno=ahgspn (which=apno for men)]
end if
sort cases by ahhid aspno    [sorts by new ID]
match files /file=*
  /file=men.sav
  /by ahhid aspno            [matches by household ID plus new ID]
list ahhid apno ahgspn aspno [to check correct outcome]
sel if ahgsex=2 and
  ahgspn >0                  [retains female partners, with data from partners]
```

Weights

The weights adjust for (1) whole household non-response, (2) individual non-response within a household both for the interview and for the diary, and (3) the oversampling oc PC homes in wave one.   At the start of the analysis use the procedure:

weight by [one and only one of the following]

(w)pcwght	an individual-level weight that adjusts sample characteristics to that expected of the population, ieeliminating or reducing the effects of the oversampling of homes with PCs
(w)hhwght	a household-level weight to reduce the effects of household non-response
(w)indwght	an individual weight which incorporates *ahhwght* and further adjusts for within-household non-response
(w)dywght	an individual diary-response weight which incorporates *aindwght* and further adjusts for diary non-response
(w)pchwght	combines *apcwght* and *ahhwght*
(w)pciwght	combines *apchwght* and *aindwght*
(w)pcdwght	combines *apciwght* and *adywght*

The oversampling of PC homes can also be dealt with by separate analysis of the two sub-samples (pc and non-pc).

Table of Variable Names, Labels And Occurrence In Waves 1-3

Key

W1 = Wave One (a)
W2 = Wave Two (b)
W3 = Wave Three (c)
DV = Derived Variables, Weights and Checks
G = Household Grid
I = Individual Questionnaire
H = Household Questionnaire
DD = Diary Data

Variables are listed alphabetically by variable name. Substitute (W) for letter of relevant wave :
Wave 1 = a
Wave 2 = b
Wave 3 = c

For example, the age variable in the second wave is named 'bage'.

VAR NAME	VARIABLE LABEL	W1	W2	W3
(W)1STNET	About how long ago first used the internet?	I41	I34	I34
(W)2FINHI	number 5 indoor acts weekly or more	.	DV	DV
(W)2FINHI	number 2 indoor acts done weekly plus	DV	.	.

Variables Organised by Theme

The following is a list of variable labels and names organised by 14 themes. Click the link to view variables ordered by the relevant theme:

1) Computers
2) Demographics
3) Domestic Activities
4) Education/ Training
5) Employment
6) Family
7) Housing
8) Income
9) Internet
10) Leisure Activities
11) Social Networks
12) Telephones
13) Television
14) Teleworking/ Home-based Working

Replace (W) with letter corresponding to wave:
Wave 1 = a
Wave 2 = b
Wave 3 = c

1) Computers

(W)1STNET	About how long ago first used the internet?
(W)BUYSOFT	Expect to buynew software in next year?
(W)CASHHRD	How much spent on pc hardware 12 months
(W)CASHSFT	How much spent on pc software 12 months
(W)COMPUSE	Do YOU ever use a computer at home?
(W)EMAIL1A	[pc 1] e-mail client, program - Outlook
(W)EMAIL1B	[pc 1] e-mail client, program - Simeon

(W)EMLXLOC	email non-local friends &
(W)FRI28	Hrs PC games Fri
(W)FRI29	Hrs email Fri
(W)FRI30	Hrs www Fri
(W)FRI31	Hrs PC home-study Fri
(W)FRI32	Hrs PC paid work Fri
(W)FRI33	Hrs PC other Fri
(W)GAMEN	how many games consoles
(W)GAMLOC	location of games consoles
(W)GAMWHO	who uses games consoles
(W)GETNET	may net link only or first -mention pc
(W)GETNET1	[pc 1] How likely on-line connection...?
(W)GETNET2	[pc 2] How likely on-line connection...?
(W)GETNET3	[pc 3] How likely on-line connection...?
(W)GETNET4	[pc 4] How likely on-line connection...?
(W)GETPC	who got only or first-mention pc
(W)GETPC1	[pc 1] Who decided to get the pc?
(W)GETPC2	[pc 2] Who decided to get the pc?
(W)GETPC3	[pc 3] Who decided to get the pc?
(W)GETPC4	[pc 4] Who decided to get the pc?
(W)HGQBY	Eligibility - computer in household?
(W)HPCHOME	pc - computers in the home
(W)HPCUSER	min number pc users in home
(W)ISP	net provider only or first-mention pc
(W)ISP1	[pc 1] Which companys internet service?
(W)ISP2	[pc 2] Which companys internet service?
(W)ISP3	[pc 3] Which company's internet service?
(W)ISP4	[pc 4] Which companys internet service?
(W)JPCPROG	programming tasks done most days
(W)JWKPC	Do you use a computer in your job
(W)KFRG11	Hours on home pc Friday
(W)KFRG12	Hours on internet Friday
(W)KFRG13	Hours all ICT Friday
(W)KIDNET	How often children use the internet?

(W)KMOG11	Hours on home pc Monday
(W)KMOG12	Hours on internet Monday
(W)KMOG13	Hours all ICT Monday
(W)KSAG11	Hours on home pc Saturday
(W)KSAG12	Hours on internet Saturday
(W)KSAG13	Hours all ICT Saturday
(W)KSUG11	Hours on home pc Sunday
(W)KSUG12	Hours on internet Sunday
(W)KSUG13	Hours all ICT Sunday
(W)KTHG11	Hours on home pc Thursday
(W)KTHG12	Hours on internet Thursday
(W)KTHG13	Hours all ICT Thursday
(W)KTUG11	Hours on home pc Tuesday
(W)KTUG12	Hours on internet Tuesday
(W)KTUG13	Hours all ICT Tuesday
(W)KWEG11	Hours on home pc Wednesday
(W)KWEG12	Hours on internet Wednesday
(W)KWEG13	Hours all ICT Wednesday
(W)KWG11	Weekly hours on home pc
(W)KWG12	Weekly hours on internet
(W)KWG13	Weekly hours all ICT
(W)KWPRI23	weekly hours pc games
(W)KWPRI24	weekly hours pc email
(W)KWPRI25	weekly hours www
