

ERROR LOG FOR THE GIS OF ANCIENT PARISHES

Nick Burton, Great Britain Historical GIS Project, December 2002

After creating the GIS of Ancient Parishes of England and Wales from Kain and Oliver's Adobe Illustrator files and accompanying gazetteer, there remain a number of different types of errors. These errors have been caused by a number of reasons and have been described and quantified below. Each type of error has a numerical code that has also been attributed to each polygon in the GIS coverage (ERROR_TYPE field). Polygons that are fine have an error type of 0.

ERROR_TYPE = 1

167 out of 22729 polygons have a label point but no reference number (NUM). This is caused by there being no label in the original Kain & Oliver maps. This means that these polygons can not be joined to the gazetteer.

ERROR_TYPE = 2

146 out of 22729 polygons that have a label and a reference number (NUM), do not have a corresponding entry in the accompanying gazetteer (published with the book as an Excel spreadsheet). The above polygons cannot therefore be joined to the gazetteer. See table below for a full listing of these errors.

After joining the gazetteer to the GIS coverage it was found that **563** out of 18600 gazetteer entries have not been joined. These have been listed in the table '**GAZETTEER ENTRIES NOT JOINED TO THE GIS**' below.

The main reason for the polygons and the gazetteer not linking is due to either the maps having reference numbers with letter suffixes, and the gazetteer not having them, or vice versa, for example:

MAP / GIS / PAT (NUM)	GAZETTEER (NUM)
22/402A	22/402
22/402B	
43/2	43/2A
	43/2B

Another major factor is when Kain and Oliver have not been able to map these areas in the first place. These are indicated in the comments field (COM) of the gazetteer with comments such as 'not found', 'not used', 'not located', and 'not satisfactorily located'. These two reasons account for 374 of the 563 errors.

ERROR_TYPE = 3, 4 and 5

Ignore. These errors concern linking the GIS to the 1851 census.

THE ERRORS

ERROR_TYPE = 2 (The GIS has a NUM value but this doesn't have an entry in the gazetteer)

NUM	NUM	NUM	NUM	NUM	NUM
