Young Lives 🏃 COMMUNITY QUESTIONNAIRE (ROUND 1) Draft 10–30 MAY 2002	COMMUNITY ID:						FORM NO:					

THE YOUNG LIVES STUDY COMMUNITY QUESTIONNAIRE

CONTENTS

Section 1   Physical environment
Section 2   Social environment
Section 3   Infrastructure and access
Section 4   Economy
Section 5   Health and education

Community definition: Administrative areas will normally be used in the YLS to delineate communities as they have the advantage of being geographically well defined, well recognised, are often the level of policy allocation and sometimes the level at which secondary data is broken down to. The community may be smaller, larger or the same size as the sentinel sites and might include a whole village or a suburb in a city**.** In rural areas where the sentinel is part of a town the definition of the community should be taken as that individual town. In some rural sentinel sites only a certain percentage of children will be recruited from defined communities with the remainder coming from small villages or very scattered dwellings which have no clear community centre and where each household/village is effectively a community in its own right. In these situations there may be little point collecting community data and the questionnaire should refer to the entire district rather than individual communities.

Selection of informants: We anticipate that in most countries the community questionnaire will be administered by the field supervisor through interviews with key community leaders conducted during the community entry process. Possible key informants include: municipal/commune leaders, government officials, village headmen, child health nurses, headmasters, leaders of women's groups and religious leaders

Use of secondary data: In some cases it will be more appropriate to use existing sources of community level information, such as census records, than to collect new data. Countries must explore whether relevant data exists, assess the data quality (e.g must be recent have minimal levels of missing data and reflect both public and private sectors), whether the level of aggregation is compatible with the YLS and then obtain permission to use the data. Where appropriate secondary data should be entered in the questionnaire prior to the supervisors going to the field.

THE YOUNG LIVES STUDY
COMMUNITY QUESTIONNAIRE

CENTRE FOR ECONOMIC AND SOCIAL STUDIES
Nizamia Observatory Campus, Begumpet, Hyderabad – 500 016,
Andhra Pradesh.

THE YOUNG LIVES STUDY COMMUNITY QUESTIONNAIRE

Community definition : Administrative areas will normely be used in the YLS to delineate communities as they have the advantage of being geographically well defined, well recognised, are often the level of policy allocation and sometimes the level at which secondary data is broken down to. The community may be smaller, larger or the same size as the sentinel sites and might include a whole village or a suburb in a city. In rural areas where the sentinel is part of a town the definition of the community should be take as that individual town. In some rural sentinel sites only a certain percentage of children will be recruited from defined communities with the remainder coming from small villages or very scattered dwellings which have no clear community centre and where each household/village is effectively a community in its own right. In these situations there may be little point collecting community data and the questionnaire should refer to the entire district rather than individual communties.

Selection of informants : We anticipate that in most countries the community questionnaire will be administered by the field supervisor through interviews with key community leaders contacted during the community entry process. Possible key informants include: municipal/commune leaders, government officials, village headmen, child health nurses, headmasters, leaders of women's groups and religious leaders.

Use of secondary data : In some cases it will be more appropriate to use existing sources of community level information, such as census records, than to collect new data. Countries must explore whether relevant data exists, assess the data quality (e.g. must be recent have minimal levels of missing data and reflect both public and private sectors), whether the level of aggregation is compatible with the YLS and then obtain permission to use the data. Where appropriate secondary data should be entered in the questionnaire prior to the supervisors going to the field.

NOTES :

Definition of community

The administrative area associated with the place where the index children enrolled in the project live. In urban areas the "community" which best corresponds could be a district or part of a district with a recognized authority. In rural areas the " community" might be the nearest town or village which provides education, health and other services for the family. In rural areas where the selected families are isolated and spread out without a clear relationship to a particular population centre then the data should be collected for the district as a whole. In clusters where it is necessary to enroll children in different population centres, e.g. different villages and towns then more than one community survey will need to be completed and priority should be given to collecting information from the towns or villages with the greatest number of children in the project.

Selection of Informants

The information needed for the community questionnaire should obtained by the field supervisor from the local authorities from whom permission to do the study was obtained. Examples of suitable people include local mayors, community leaders, health, education or agricultural authorities, religious leaders, representatives of grass roots organizations etc. It is possible that the information may be best collected in two parts, an interview and a meeting to which are invited the people best able to provide the information needed about the community. This meeting could be when the results of the surveys are given to the community. (Note: originally it was thought that the questionnaires would be data entered and a preliminary analyses done in the field so that a preliminary report could be given to the authorities before leaving the cluster – in practice this was never possible).

Use of information from other sources

We will try and correlate the existing official information from the selected districts with the information given by the local leaders. If the supervisor has been given a copy of the information about the district and this does not coincide with the local information then make a note of this and try and find out why there are discrepancies.
