

National Child Development Study

Notes on the: **BRISTOL SOCIAL ADJUSTMENT GUIDE**

Background

NB: Based on notes appearing in the *NCDS1 Coding Frame*, page 72

The British Social Adjustment Guide (BSAG) was included in the first and second NCDS follow-ups (NCDS1 and NCDS2). The Guide has been completed and scored in accordance with the general instructions in BSAG manual (Stott, 1965), which should be consulted before the data are used.

The material consists of:

- the **Guide**, completed by the teacher;
- a **Transparent template** which, when superimposed on the guide, allows the allocation of serial letters and numbers to the aspects of the behaviour on the guide; which are then transferred to
- the **Coding Form** for the Guide by ringing the same letters and numbers on the form.

The BSAG consist of a large number of 'phrases' which describe a child's behaviour. These 'phrases' are grouped on the Guide into 'paragraphs' under a heading (eg: 'Response to greeting'). The teacher is asked to underline the 'phrases' which describe the child's behaviour. Most of these 'phrases' can be allocated serial letters and a number. These were specially designed for the NCDS Coding Form and are different from those used in the published Scoring form for use with the Guides.

Serial letters and numbers are allocated so that certain aspects of behaviour can be grouped together. For example, it is assumed that the aspect of behaviour denoted by UA1 is on the same continuum or belongs to the same 'syndrome' as UA2 and UA6; and, indeed, as UB6, since the first letter indicates the group on the Coding Form to which the 'phrase' belongs. Thus all serial letters and numbers beginning with letter 'U' are in the same group, on the assumption that the general behavioural pattern which underlies these individual descriptions or 'phrases' is the same - in this instance 'Unforthcomingness'. It must be stressed that this assumption has not yet been reliably verified. The 'Group' or 'Syndrome' to which each particular 'phrase' is allocated was agreed after discussion with Stott in 1965 and is not necessarily the same as in the published *Manual* or *Scoring Form*. When the Guide has been coded and the serial letters and numbers transferred to the NCDS Coding Form, the total number of ringed letters and numbers in each 'Group' is calculated and recorded. These totals are regarded as the 'Syndrome' scores, giving some quantitative assessment of the behaviour pattern in question. As stressed above, given the present state of knowledge, these should be viewed with caution and the individual 'phrases' which make up a 'Syndrome' should be scrutinised carefully before any interpretations are made. Finally, the 'Syndrome' totals are added together to give a figure which indicates, fairly crudely, the total amount of behavioural deviance (or maladjustment?) as measured by the Guide.

Stott D H (1969) *The social-adjustment of children: Manual to the Bristol Social-Adjustment Guides*. University of London Press

Stott D H (1987) *The social adjustment of children: Manual to the Bristol Social Adjustment Guides*. London: Hodder and Stoughton

BSAG 'SYNDROMES'

Serial Letter	Phrases	Syndrome
U	UA1-9, UB1-9	Unforthcomingness
W	WA1-7, WB1-6	Withdrawal
D	DA1-7, DB1-7, DC1-6	Depression
X	XA1-8, XB1-8	Anxiety
HA	HA1-8, HB1-8, HC1-8	Hostility towards adults
K	KA1-7, KB1-7, KC1-7	Writing-off of adults and adult standards
L	LC1-8, LD1-5	Anxiety for acceptance by children
HC	JA1-7, JB1-3	Hostility towards children
R	RA3-7, RB1	Restlessness
I	IM1-7, IN1-6	Inconsequential behaviour
M	MA1-7, MB1-5	Miscellaneous symptoms
M	MN1-7	Miscellaneous 'Nervous' symptoms
BSAG score	All above phrases	Total behavioural deviance
Other	All phrases below	Do not contribute to BSAG score 'syndromes'
AT	AT1-5	Attendance
AP	AP1-5	Appearance
ST	ST1-6	Miscellaneous
SR	SR1-2	Health factors - 1
SO	SO1-9	Health factors - 2
PD	PD1-7	Health factors - 3
PE	PE1-6	Size

BSAG in NCDS1

NB: Based on notes appearing in the NCDS SIR database and reproduced in the NCDS Data Dictionary)

The Bristol Social Adjustment Guides (BSAG) were designed to describe the child's behaviour in particular settings. The Guides have been completed and scored in accordance with the general instructions in Stott(1965),The Manual to the Bristol Social Adjustment Guides, University of London Press, which should be consulted before the data is used. Teachers completed the Guides for study members by underlining 'items of behaviour' they thought described the child's behaviour or attitudes. For the NCDS, behaviour items have been grouped together into a number of 'Syndromes' in accordance with a procedure agreed with Stott in 1965 but not necessarily the same as in the published manual. It is assumed that the general behavioural pattern which underlies these individual items is the same. For a discussion of whether this is so, and a critical examination of the Guides see: Ghodsian, M (1977) 'Children's Behaviour and the BSAG: some theoretical and statistical considerations', *British Journal of Social and Clinical Psychology*, 16.

Total 'Syndrome' scores are meant to give a quantitative assessment of the behaviour pattern in question. The Syndrome totals are added together to give the figure contained in variable N455, which indicates, fairly crudely, the total amount of behavioural deviance(or maladjustment?) as measured by the Guide. Totals of 12 'Syndromes' are used for this purpose (Variables N432 ,N434 ,N436, N438, N440, N442, N444, N446, N448, N450, N452, N454 - Unforthcomingness, Withdrawal, Depression, Anxiety for acceptance by adults, Hostility towards adults, 'Writing off' of adults and adult standards, Anxiety for acceptance by children, Hostility towards children, Restlessness, 'Inconsequential' behaviour, Miscellaneous symptoms, Miscellaneous nervous symptoms). There are sub-groups of some syndromes and which are not included in the total score (N458, N462, N466, N470, N472, N481, N427 - Attendance, Appearance, Miscellaneous, Health factors- 1, Health factors-2, Health factors-3, Size).

NCDS1 BSAG Variables

Variable	Label
n432	1S BSAG – Unforthcomingness
n434	1S BSAG – Withdrawal
n436	1S BSAG – Depression

BSAG in NCDS2

NB: Based on notes appearing in the NCDS SIR database and reproduced in the NCDS Data Dictionary)

The Bristol Social Adjustment Guides (BSAG) were designed to describe the child's behaviour in particular settings. The Guides have been completed and scored in accordance with the general instructions in Stott (1965), *The Manual to the Bristol Social Adjustment Guides*, University of London Press, which should be consulted before the data is used. Teachers completed the Guides for study members by underlining 'items of behaviour' they thought described the child's behaviour or attitudes. For the NCDS, behaviour items have been grouped together into a number of 'Syndromes' in accordance with a procedure agreed with Stott in 1965 but not necessarily the same as in the published manual. It is assumed that the general behavioural pattern which underlies these individual items is the same. For a discussion of whether this is so, and a critical examination of the Guides see: Ghodsian, M (1977) 'Children's Behaviour and the BSAG: some theoretical and statistical considerations', *British Journal of Social and Clinical Psychology*, 16.

Total 'Syndrome' scores are meant to give a quantitative assessment of the behaviour pattern in question. The Syndrome totals are added together to give the figure contained in variable N1008, which indicates, fairly crudely, the total amount of behavioural deviance (or maladjustment?) as measured by the Guide (N974, N977, N980, N983, N986, N989, N992, N995, N998, N1001, N1004, N1005, - Unforthcomingness, Withdrawal, Depression, Anxiety for acceptance by adults, Hostility towards adults, 'Writing off' of adults and adult standards, Anxiety for acceptance by children, Hostility towards children, Restlessness, 'Inconsequential' behaviour, Miscellaneous symptoms, Miscellaneous nervous symptoms). There are sub-groups of some additional items which do not purport to reflect syndromes and which are not included in the total score (N1061, N1066, N1071, N1077, N1079, N1088, N1095 - Attendance, Appearance, Miscellaneous, Health factors- 1, Health factors-2, Health factors-3, Size)
