1. Introduction

For some time ONS has been considering changing the name of the All Fields Postcode Directory (AFPD). The name originated many years ago when we moved to producing an all-encompassing postcode directory rather than the separate directories (Central Postcode Directory, 1991 Frozen Postcode Directory, NHS Postcode Directory and 1991 Enumeration Postcode Directory) produced hitherto. AFPD, as a title, is now less meaningful, has attracted criticism for not meeting customers' expectations and has outlived its usefulness.

Therefore, with effect from the May 2006 release of the postcode directory, it has been re-named as the National Statistics Postcode Directory (NSPD).

The name has been chosen because it is felt that it more fully reflects the production of national statistics which is the prime purpose for which the directory is produced.

The National Statistics Postcode Directory (NSPD) relates both current and terminated postcodes in the United Kingdom to a range of current statutory administrative, electoral, health and other area geographies. It also links postcodes to pre-2002 health areas, 1991 Census enumeration districts (for England and Wales), 2001 Census Output Areas (England, Wales, Scotland and Northern Ireland), Super Output Areas (England and Wales) and Scottish Datazones. It helps support the production of area based statistics from postcoded data. The NSPD is produced by ONS Geography, which provides geographic support to the Office for National Statistics (ONS) and geographic services used by other organisations. The NSPD is issued quarterly.

This User Guide contains information about the NSPD including:

- directory content;
- data currency;
- the methodology for assigning areas to postcodes;
- standard names and codes;
- data formats; and
- data quality and limitations.

A set of **Version Notes** accompanies each quarterly release of the NSPD. These contain a range of summary statistics and highlight important issues that may affect customers. The **Version Notes** provide information about postcode reorganisations, administrative and electoral area changes, the introduction of new methodologies and/or geographies and limitations that are specific to a particular release of the NSPD.

The NSPD reflects current and terminated postcodes using information supplied on a monthly basis by Royal Mail. The NSPD relates postcodes (as at the third Friday of the month prior to each release) to administrative and electoral areas as at May 2005 and also to the latest known health areas. The area assignments for current postcodes in Scotland are to the electoral wards introduced in 1999 and the Council Areas introduced in 1996, both of which still existed at 31st December 2005. The area assignments for current postcodes in Northern Ireland are to the electoral wards and District Council Areas introduced in 1992, which still existed at 31st December 2005.

The NSPD uses the ONS standard codes for administrative and electoral areas and the NHS codes for health areas. Code ranges for other geographies are those used by the organisation responsible for the geographies where a code range already exists. Look up files linking these codes to statutory area names are sent out with the NSPD as a separate electronic file. Customers are encouraged to adopt the

ONS standard names and codes where possible, as these are the recognised standard for National Statistics.

The 'Gridlink[®]' methodology used to create the NSPD, based on 1-metre grid references and digital administrative and electoral area boundaries, was introduced in November 2000. Further information on the Gridlink[®] initiative is provided in Section 6.

Customers may opt for either the 'full' NSPD or 'core' NSPD containing specific fields, each available with 1m or 100m grid references and a choice of area coverage. Annex G shows the full Field Specification and Annex H shows the core Field Specification. The record specification at Annex B includes complete details of all available fields.

The NSPD is supplied with both a 7-character postcode comprising an outward code (2-4 characters) and an inward code (always 3 characters), or an 8-character postcode (includes a space between the outward and inward codes).

The NSPD is available on CD-ROM (see Annex C) and order forms can be obtained by contacting ONS Geography Customer Services (see below).

A selection of useful web links is included at Annex E.

Unit postcodes remain the copyright of Royal Mail. All other information on the NSPD is Crown copyright.

Any queries that are not answered within this User Guide or in the accompanying Version Notes should be directed to:

ONS Geography Customer Services
Office for National Statistics
Segensworth Road

Tel: 01329 813243
GTN 3042 3243
Fax: 01329 813383
E-mail: ons.geography@ons.gov.uk

Note: ONS Geography does not have the capability to deal with detailed postcode queries relating to Scotland and Northern Ireland, but can pass them on to the appropriate government departments.

2. New Information

Latest geographies included on the NSPD

The following geographies are now routinely available on the NSPD:

- Merged SHAs for England
- New Health Board areas for Scotland
- New Primary Care areas for England

Further information is provided in the **Version Notes**.

3. Frequently Asked Questions (FAQs)

Why are some postcodes not assigned to administrative and electoral areas?

- This mainly applies to new postcodes, which are assigned grid references by ONS Geography using imputation techniques - see Sections 7 and 8. In some cases the imputation procedure cannot assign a grid reference and, because the Gridlink[®] processing system assigns postcodes to administrative and electoral areas using grid references with digital administrative and electoral area boundaries, codes for the administrative and electoral areas cannot be derived. In time, the addresses in the new postcodes are surveyed by Ordnance Survey, who then assign accurate grid references.

Why are some postcodes assigned to the wrong administrative and electoral areas?

- There are two reasons:
 1. Imputation: Some postcodes are assigned to administrative and electoral areas using an imputed grid reference. Imputation is not an exact science and can cause postcodes to be wrongly assigned until more accurate information becomes available. Please inform ONS Geography Customer Services of any postcodes considered to be wrongly assigned.
 2. Straddling: As the postal and administrative/electoral geographies do not map directly onto one another, postcodes often straddle administrative and electoral boundaries. Postcodes are always assigned to single administrative and electoral areas based upon a single grid reference (which is the mean of all the addresses in the postcode or the address closest to the mean). This will inevitably lead to apparent wrong assignments, where addresses in a postcode fall in two administrative/electoral areas (see Section 8).

Why don't postcode areas follow administrative and electoral area boundaries?

- Postcode areas are defined and used by Royal Mail for the purpose of efficient mail delivery and have no relationship with administrative and electoral areas. Royal Mail requires a relatively stable geography in order to deliver its services, which the administrative and electoral area geography cannot provide.

Why don't all the 1991 electoral ward/ED codes on the NSPD match the current electoral ward codes?

- The 1991 electoral ward/ED assignments relate to administrative and electoral areas as constituted at the 1991 Census. Many administrative and electoral areas have undergone statutory boundary changes since then, leading to new electoral wards with new codes; these new codes are used for current postcode-to-ward assignments.

4. Postcode content

The NSPD contains both 'live' postcodes and postcodes which have been terminated by Royal Mail but not subsequently re-used (see Section 10).

Postcode coverage is for the entire United Kingdom, the Channel Islands and the Isle of Man. The split between large and small users and country and the changes in the numbers of postcodes since the previous NSPD are shown in Table 1 of the **Version Notes**.

The numbers of postcodes, postcode sectors and postcode districts by postcode areas are shown in Table 2 of the **Version Notes**.

5. Currency of data

Postcodes

Information about changes to the postcode geography is routinely received from Royal Mail on a monthly basis and so the currency of the UK postcodes on any version of the NSPD will usually be to the third Friday in the previous month.

Administrative/electoral and health areas

Information about the currency of administrative/electoral and health areas on the NSPD is contained in the **Version Notes**.

6. Gridlink[®]: general

The postcode is a key piece of data that can provide a geo-spatial reference for many uses beyond the delivery of mail. In order to make full use of its potential, and to deliver improved consistency, a consortium of organisations was formed in 1999 to allow the specialist resources of each member to be pooled. The Gridlink[®] Consortium consists of Royal Mail Group plc, Ordnance Survey (GB), General Register Office for Scotland, Ordnance Survey of Northern Ireland (OSNI[®]) and ONS.

It was soon recognised that a core set of data within each Consortium member's postcode products needed to be consistent and branded. The branding name is 'Gridlink[®]' and the core data are:

- All current (i.e. 'live') UK unit postcodes (but ONS will continue to maintain postcodes terminated and not subsequently re-used by Royal Mail).
- Grid references to 1 metre resolution (and optionally truncated to 100 metres).
- Positional quality indicators for grid references.
- UK country codes.
- Electoral ward codes.
- Administrative local authority district codes.
- Administrative unitary authority codes.
- Administrative county codes.
- Health regional area codes.
- Health authority codes.

Each of the Gridlink[®] Consortium members produces their postcode products based upon the core data. A diagram showing the Gridlink[®] data and all other geography allocation methods is included at Annex F.

7. Grid references

Postcode grid references in the NSPD are available in 1 or 100 metre resolution and the majority are derived from the Ordnance Survey product ADDRESS-POINT[®] that contains grid references for each address to 0.1 metre resolution. Newly introduced postcodes will initially have a grid reference that has been imputed by ONS Geography. In due course though these will be replaced by improved ADDRESS-POINT[®] grid references which use data supplied by Ordnance Survey's field surveyors.

Each grid reference is given a Positional Quality Indicator (PQI) to denote the accuracy of the grid reference, as follows:

- 1 within the building of the matched address closest to the postcode mean,
- 2 as for 1 above, except by visual inspection of Landline maps (Scotland only),
- 3 approximate to within 50 metres,

- 4 postcode unit mean (mean of matched addresses with the same postcode, but not snapped to an address),
- 5 imputed by ONS, by reference to surrounding postcode grid references,
- 6 postcode sector mean (mainly PO Boxes),
- 7 not in use,
- 8 postcode terminated, last known ONS grid reference used,
- 9 no co-ordinates available,
- 0 not in use.

The grid references provided for Northern Ireland postcodes are derived from the OSNI[®] product 'Pointer' and use the Irish National Grid system that covers all of Ireland and is independent of the British National Grid.

No grid references are provided for postcodes in the Channel Islands and the Isle of Man.

8. Assignment of postcodes to administrative and electoral areas and other geographies held on the NSPD

Administrative and electoral areas – GB

As part of the Gridlink[®] initiative, postcodes in Great Britain are assigned to administrative and electoral areas by Ordnance Survey (GB) using a 'point-in-polygon' methodology that matches 0.1 metre resolution grid references for postcodes (derived from ADDRESS-POINT[®] – see Section 7) against their Boundary-Line[™] product. Boundary-Line[™] is now produced in June and contains all administrative and electoral area boundary changes to the previous May.

Administrative and electoral areas – Northern Ireland

A similar process is being used by OSNI[®], which enables a UK postcode directory to be produced. The currency of the Northern Ireland administrative and electoral area data is to the present time as their boundaries have remained unchanged since 1992.

Health areas and administrative and electoral areas

Changes to administrative and electoral area boundaries are not automatically applied to health areas so the two boundary sets have ceased to be co-terminous, but the impact on postcode assignments has been minimised through use of digital health area boundaries created when initially defined in terms of co-terminous administrative and electoral areas.

Similarly, in Scotland, administrative and electoral boundary changes do not routinely affect health boundaries although health area boundaries may later be altered to align with changed administrative and electoral area boundaries.

As changes to administrative and electoral boundaries in Northern Ireland usually change about every 10 years boundary co-terminosity is more stable than elsewhere in the United Kingdom.

Other geographies held on the NSPD

Other area assignments are based on point-in-polygon techniques and the appropriate digital boundaries.

9. Scottish input to the NSPD

The General Register Office for Scotland (GROS) provides ONS with 6-monthly input to the NSPD, covering a range of geographies for Scottish postcodes.

Large user postcodes

In Scotland, boundaries are not drawn for large user postcodes. Instead large users are linked to the nearest small user postcode (small user link). Geographic data assigned to large user postcodes is that of the small user link. However not every large users is assigned geographic data. The exceptions are large users that are PO Boxes, large users that GROS cannot find a small user link for and new large users that have still to be linked. Instead GROS assign a Council Area (ward) code via imputation procedures for their Postcode Index (Scottish equivalent to the NSPD). However, in order to maintain UK consistency the NSPD uses the Gridlink[®] grid reference, ward and health codes (and other geographies based upon them) in these instances. For more information on Scottish large users please contact GROS (see Section 1).

Split postcodes

GROS splits a postcode into separate polygons when:

- a postcode straddles 2 or more Council Area boundaries;
- a postcode straddles the Scottish/English border and when
- an island and the mainland or 2 islands share a postcode.

The split postcode is identified by an 'A', 'B' or 'C' suffix in the Scottish Postcode Index. However, for the purposes of the NSPD split postcodes are not recognised. Instead GROS converts the split record into a single record assigning to it the area codes from the largest part of the split. The results may produce differences in the allocation of area codes when compared with the Postcode Index and users should refer to GROS for specific information relating to Scottish split postcodes (see Section 1).

The Gridlink[®] core dataset covers grid reference, ward code and health code for UK postcodes - but other geographies, where applicable, are assigned from the GROS file.

10. PO Boxes and non-geographic postcodes

Non-geographic postcodes can either be special postcodes assigned to some large users of the postal service or PO Boxes that lie within a (pseudo) postcode district that does not form a discrete part of a post town. These will all have been assigned a grid reference, usually the local Royal Mail sorting office, and the majority have a PQI of 1 but some have been assigned a PQI of 6 (see Section 7).

11. Terminated postcodes

Postcodes are frequently terminated by Royal Mail for various reasons but most commonly it is due to the demolition/re-development of buildings or to postcode reorganisations (see Section 12).

Terminated postcodes are occasionally re-used by Royal Mail but not usually before an elapsed period of two years. In such circumstances, all terminated postcodes and their grid references are retained on the NSPD and a 'termination date' is added which provides a clear indication of a postcode's status.

Areal data assigned to terminated postcodes are updated prior to each release of the NSPD, so the directory contains *current* information linked to each record.

If, and when, a postcode is subsequently re-used by Royal Mail the old grid reference and termination date are removed, thus deleting all reference to the former existence of the postcode from the NSPD. The new location of the postcode will initially have a grid reference imputed by ONS Geography, which will eventually be replaced by an improved one derived from Ordnance Survey's ADDRESS-POINT® product.

As the Gridlink® system processes only 'live' postcodes it is not possible to assign Gridlink® quality grid references to postcodes terminated prior to November 2000. Grid references for these postcodes have been copied from the old 'Traditional' NSPD and have been given a single PQI (value 8). However, in instances where terminated postcodes have been replaced by new postcodes on a one-for-one basis (as part of postcode reorganisations) the area information and the associated PQIs for the 'reorganised' postcode have been copied back to the terminated postcode.

The numbers of terminated postcodes included in each issue of the NSPD are shown in Table 4 of the **Version Notes**.

12. Postcode reorganisations

Royal Mail conduct biannual postcode reorganisations (usually in May and November) in order to create more postcodes in areas where the number of postcodes that can be created under the current structure is exhausted. For example, SO3 was reorganised some years ago into SO31 and SO32 to cater for current demands, and the reorganisation additionally allows SO33-SO39 postcodes to be assigned at a later date.

Royal Mail issue lists of postcode reorganisations in their 'Update' series. Details of the latest 'Updates' in this series that have been incorporated in the current version of the NSPD are given in the **Version Notes**. Details of postcode reorganisations can also be found at royalmail.com - the Royal Mail website.

13. Strategic Health Authorities (SHAs) and Health Boards

The National Administrative Codes Service (NACS) in England, ONS on behalf of Scotland and Health Solutions Wales are responsible for maintaining their respective health area codes, and these were reorganised in 2002 (England) and 2003 (Wales). The SHAs in England were further reorganised by the NHS on 1st July 2006 to reduce the number from 28 to 10. Details of the various code ranges are given at Annex B, and information regarding the latest changes can be found in the **Version Notes**.

14. Primary Care Organisation area assignments

Postcodes on the NSPD have been assigned Primary Care Organisation (PCO) codes. Postcodes in Scotland, Northern Ireland, Channel Islands and Isle of Man (for which there are no equivalent areas) have been assigned a dummy code of 'X98'.

The Primary Care geography in England was reorganised significantly on 1st October 2006. When PCOs were statutorily defined, they were done so in terms of whole local authority districts and/or electoral wards (in most instances) that existed at the time. There are now 148 Primary Care Trusts (PCTs) and four Care Trusts.

Each of the 22 Local Health Boards in Wales comprises a single unitary authority as at 1st April 2003.

15. 1991 Census enumeration districts (EDs)

The NSPD assigns 1991 Census EDs to postcodes in England, Wales and Northern Ireland. For postcodes in England and Wales, there are two types of assignment:

- Postcodes existing at the 1991 Census whose EDs were assigned using information on the census forms. These are mostly residential postcodes.
- Postcodes existing at the 1991 Census whose EDs could not be assigned using Census forms, or postcodes introduced since the 1991 Census whose EDs have been assigned by point-in-polygon techniques. These are a mix of residential and business postcodes.

Many postcodes existing at the 1991 Census straddled ED boundaries. In such instances and where EDs have been assigned using information from census forms, a single 'best-fit' ED is given (based on the ED with the largest number of households in that postcode). All digitally assigned EDs use the postcode 1m grid reference to obtain an accurate assignment.

There are also a small proportion of postcodes for which it has not been possible to assign EDs. This is because either there was insufficient information at the time of the 1991 Census or, for newer postcodes, because the postcode does not have a 1 metre grid reference.

EDs have not been assigned to postcodes in Scotland, the Channel Islands and the Isle of Man. The ED field holds a pseudo code for postcodes in these countries.

ED indicator field

- 0 - Postcodes with an original ED assignment using the 1991 Census form.
- 1 - Postcodes for which an ED code was assigned using point-in-polygon techniques.
- 2 - Postcodes without a 1m grid reference that were assigned an ED code from the ED:Postcode link file after the 1991 Census.
- 6 - Postcodes in Northern Ireland.
- 9 - Postcodes in Scotland, Channel Islands and Isle of Man.
- Δ - No information available.

Notes on the accuracy of postcode assignments to EDs

Quality checks of the ED assignments for current postcodes have revealed that at least 94% of postcodes assigned to EDs using census forms have been assigned to the correct best-fit EDs and that a further 4% have been assigned to one of the smaller part EDs in the postcode. This 98% accuracy level may in fact be higher because some of the errors may be due to postcode and/or ED information being incorrectly entered on the census forms. The checks have shown that the assignments for such postcodes can be used with a high degree of confidence.

In general, the accuracy of ED assignments to residential postcodes is better than to business postcodes.

16. Census Output Areas (COAs)

Postcodes were originally assigned to COAs by one of two methods.

Method 1:

A postcode to COA lookup was compiled incorporating those 1.52 million postcodes existing at the date of the 2001 Census (29 April) used to create COAs. The design of the COAs was constrained by those electoral ward boundaries promulgated in Statutory Instruments by the end of December 2002. Consequently some postcodes

were split by the electoral ward boundaries. In these instances the split postcodes were assigned to a single COA on the basis of where the majority of the population was located. This differs from the methodology used to assign postcodes to electoral wards and administrative areas, which use the grid reference of the address closest to the postcode mean and digital boundaries.

Assigning postcodes to COAs using a population-weighted methodology and the best-fitting COAs to electoral wards can result in different postcode:electoral ward assignments when compared to a direct address-weighted point-in-polygon assignment (i.e. Gridlink®). This is because there may be more people in one part of a split postcode which results in the whole postcode being assigned to a particular COA yet, in some circumstances, there may be more addresses in the other part of the split which results in the postcode being assigned to a different COA.

Within the 1.52 million postcodes, some 267,354 large user postcodes, mainly large employer PO Box postcodes, were reviewed for the purpose of producing Census statistics because their grid references were linked to the local Royal Mail sorting office rather than their physical location. The large user postcodes included in the review have been assigned to the appropriate COAs based on their geographical location but their Gridlink® grid references have not been changed. Consequently, the use of point-in-polygon methodology to assign such postcodes to COAs will produce different COA assignments to those included on the NSPD.

Method 2:

The remaining 0.54 million postcodes in England and Wales, which comprise both new postcodes since April 2001 and postcodes terminated prior to that date, were assigned to a COA using a set of digital COA boundaries and their Gridlink® grid references. See Annex E for a link to Census OA corrections.

Over time, the use of the original methodologies to assign COAs to postcodes caused inaccuracies for some allocations. From August 2006, the common 'point-in-polygon methodology was introduced to allocate all postcodes to COAs, bringing this geography in line with the majority on the NSPD.

The first six characters of the COA represent the CAS ward code (see Section 16, and also Section 17.1 for exceptions) and the remaining four are a numerical COA code.

16.1 Postcodes assigned to both English and Scottish COAs

There are seven postcodes containing addresses falling on each side of the English/Scottish border that have been assigned to both English and Scottish Output Areas.

The NSPD contains only single postcode records and so in order to assign these postcodes to a single COA the respective Census Offices have agreed the following assignments based on population:

DG14 0TF - 60QH000081
 DG16 5EH - 60QH000003
 TD5 8BW - 35UCFZ0002
 TD9 0TU - 16UDGQ0001
 TD15 1SZ - 60QE000059
 TD15 1UY - 35UCFY0004
 TD15 1UZ - 60QE000827

The Scottish Census Office, GROS, maintain a separate Scottish postcode directory called the Postcode Index. The Postcode Index contains multiple postcode records i.e. an individual record for each split of a postcode, and these are denoted by an A, B or C suffix. GROS split postcodes if a postcode straddles two or more Council Area boundaries, or where an island and the mainland or another island share a postcode, or if a postcode straddles the Scottish/English border. Consequently, the Postcode Index includes the following 'border' postcode:Output Area assignments.

DG14 0TFA - 60QH000081
 DG16 5EHA - 60QH000003
 TD5 8BWA - 60QE000128
 TD9 0TUA - 60QE000162
 TD15 1SZA - 60QE000059
 TD15 1UYA - 60QE000826
 TD15 1UZA - 60QE000827

Three postcodes assigned to Scottish COAs in the Scottish Postcode Index (because a part of each postcode falls in Scotland) are assigned to English COAs in the NSPD (because the part of each postcode falling in England comprises a larger population). The three postcodes are TD5 8BW, TD9 0TU and TD15 1UY. Consequently, the assignments for these three postcodes will differ between the NSPD and the Postcode Index.

16.2 OA classification

The 2001 Area Classification of output areas is used to group together geographic areas according to key characteristics common to the population in that grouping. These groupings are called clusters, and are derived using 2001 population census data (see web link at Annex E for further details). The classification was originally produced with lower case characters which have been converted to upper case for consistency purposes on the NSPD.

17. Lower and Middle Layer Super Output Areas (SOAs) & Scottish data and intermediate zones

SOAs exist in England, Wales and Northern Ireland; the Scottish equivalents are called data zones and intermediate zones.

England and Wales

The Lower Layer SOAs have been designed with a mean population figure of 1500 and each consists of a grouping of Output Areas, typically five. There are 34,378 Lower Layer SOAs, with an absolute minimum population size of 1000.

The Middle Layer SOAs have a mean population figure of 7200 (minimum 5000) and consist of a grouping of Lower Layer SOAs. Middle Layer SOAs are constrained by the 2003 local authority boundaries used for 2001 Census outputs.

Scotland

Data zones are the core Scottish Neighbourhood Statistics geography. There are 6505 data zones, each containing between 500 and 1000 household residents.

Intermediate zones are the geography that sits above data zones and they have a minimum population of 2,500 - 6,000, which are of a size between the lower and middle layer SOAs in England and Wales. There are 1235 intermediate zones.

Northern Ireland

In Northern Ireland Super Output Areas (SOAs) were released in 2005. There is one layer of SOA, with a population size between 1,300 and 2,800, similar in size to the lower layer SOAs in England and Wales.

18. Census Area Statistics (CAS) wards

In processing Census data for publication, eighteen 2003 'statistical' wards were identified as sub-threshold i.e. the count of population and households fell below the threshold for creating COAs and for the non-disclosive release of Census data. These 18 sub-threshold wards were combined with seven 'receiving wards' to form acceptably sized COAs and permit publication of data. The sub-threshold wards are not separately identified in the NSPD and postcodes in these 'statistical' wards have been assigned to their 'receiving' ward. The resulting set of wards is known as CAS wards. For postcodes in England, Wales and Northern Ireland, the first six characters of the COA code (which represents the CAS ward code) have been used in the NSPD to populate the 'CAS ward' field. Postcodes in Scotland have been assigned to CAS wards using an Output Area: CAS ward look-up supplied by GROS. As CAS wards in Scotland and Northern Ireland are regarded as distinct Scottish and Northern Irish geographies it has now been decided to include their respective code ranges. Details of all the CAS ward code ranges are included in the Record Specification at Annex B. The 18 sub-threshold wards in England and their 'receiving' wards are detailed in Annex D.

18.1 Output Area/CAS ward corrections in Milton Keynes, Monmouthshire and North Norfolk

The main Census 2001 results were produced for wards legally in existence on 31st December 2002, in line with the National Statistics policy on boundary change and to meet a widespread requirement for statistics for up to date areas. However, final digital versions of boundaries for some of these wards were not available in time for use in the main Census output, and a number of differences between the draft and final boundaries occurred.

Most differences are minor, but in three local authorities - Milton Keynes (two wards), Monmouthshire (19 wards) and North Norfolk (two wards) - the differences are large enough to mean that more accurate estimates of the Census Area Statistics (CAS) for a total of 23 wards can be produced by assigning Output Areas (OAs) to a different CAS ward to that used previously. The wards affected are:

00MGNW	Stony Stratford (Milton Keynes)
00MGNZ	Wolverton (Milton Keynes)
00PPNR	Caldicot Castle (Monmouthshire)
00PPNS	Cantref (Monmouthshire)
00PPNT	Castle (Monmouthshire)
00PPNU	Croesonen (Monmouthshire)
00PPNY	Dewstow (Monmouthshire)
00PPNZ	Dixton with Osbaston (Monmouthshire)
00PPPA	Drybridge (Monmouthshire)
00PPPC	Green Lane (Monmouthshire)
00PPPE	Lansdown (Monmouthshire)
00PPPF	Larkfield (Monmouthshire)
00PPPP	Mardy (Monmouthshire)

00PPPQ	Mill (Monmouthshire)
00PPPU	Priory (Monmouthshire)
00PPPZ	St. Christopher's (Monmouthshire)
00PPQA	St. Kingsmark (Monmouthshire)
00PPQC	Severn (Monmouthshire)
00PPQE	The Elms (Monmouthshire)
00PPQF	Thornwell (Monmouthshire)
00PPQJ	West End (Monmouthshire)
33UFHC	Lancaster North (North Norfolk)
33UFHD	Lancaster South (North Norfolk)

Further details are available on the [National Statistics website](#).

19. 'Statistical' wards

'Statistical' wards are those electoral wards promulgated in Statutory Instruments by the end of a calendar year and implemented for statistical purposes on 1 April in the following year, irrespective of the year of statutory operation. The policy on statistical wards has been agreed by ministers and is intended to minimise the impact on statistics of the frequent changes to the electoral ward boundaries.

20. Local Education Authorities (LEAs)

LEAs are the bodies responsible for the local administration of state sector education services in England and Wales. Each LEA coincides with either a county¹, unitary authority, metropolitan district or London borough, and LEA boundaries are adjusted annually to correspond with any changes to the boundaries of these areas.

In Northern Ireland local education administration is the responsibility of five Education and Library Boards (Belfast, North Eastern, South Eastern, Southern, Western), which each cover one or more complete district council areas. These areas are now covered in the 'LEA' field on the NSPD and full details of the code range can be found in the Record Specification at Annex B.

In Scotland education administration is the responsibility of local government (i.e. each council area).

21. Parliamentary Constituencies

England, Wales, and Northern Ireland

Parliamentary Constituencies relate to those defined by the Parliamentary Constituencies (England) Order 1995, the Parliamentary Constituencies (Wales) Order 1995 and the Parliamentary Constituencies (Northern Ireland) Order 1995, and which came into effect at the May 1997 General Election. However, for the small number of constituencies affected by the Parliamentary Constituencies (England) (Miscellaneous Changes) Order 1998, the NSPD reflects the changes which came into effect at the June 2001 General Election. No further changes are envisaged until 2009/2010.

Scotland

The Scottish Parliament (Constituencies) Act 2004, passed by the UK Parliament in July 2004, came into effect upon the dissolution of the last UK Parliament and breaks

¹ The only exception to this is that the Isles of Scilly has its own LEA separate to that of Cornwall.

the linkage between UK Parliament constituencies and Scottish Parliament constituencies. This has enabled the Westminster Government to reduce the number of Scottish constituencies in the UK parliament in line with recommendations made by the Boundary Commission for Scotland following its the Fifth Periodical Review of Constituencies (December 2004).

The Parliamentary Constituencies (Scotland) Order 2005 details the reduction of the number of constituencies for the UK Parliament from 72 to 59 Scottish seats. The changes bring the size of Scottish constituencies more into line with the size of English seats. English constituencies currently contain nearly 70,000 voters on average, compared to the Scottish average of 53,500.

Details of the code ranges are included in the Record Specification at Annex B.

22. European Electoral Regions (EERs)

European Electoral Regions are as defined in the European Parliamentary Elections Bill (Bill 65, 1997) to amend the European Parliamentary Elections Act 1978 so as to alter the method used in Great Britain for electing Members of the European Parliament. The Bill created nine Electoral Regions in England with 64 MEPs; Scotland, Wales and Northern Ireland each constitute a single Electoral Region, with 7 MEPs, 4 MEPs and 3 MEPs respectively.

23. Nomenclature of Units for Territorial Statistics (NUTS)

NUTS is a hierarchical classification of spatial units that provides a breakdown of the European Union's territory for producing regional statistics which are comparable across the Union.

In the United Kingdom, the five-tier NUTS structure was reviewed in 1998 as a consequence of the introduction of Government Office Regions and unitary authorities/council areas. The NUTS area classification comprises national administrative and electoral areas, except in Scotland where some NUTS areas comprise whole and/or local enterprise company areas.

NUTS levels 1-3 are frozen for a minimum of three years and NUTS levels 4 and 5 have formed new Local Administrative Units (LAUs) (levels 1 and 2). The smaller administrative units (former NUTS5 units) are now called LAU2 and NUTS4 units are LAU1.

Scotland routinely digitise their postcodes. Where postcodes have yet to be digitised it has not been possible to assign a NUTS code by point-in-polygon. As Scottish LAU2 codes are yet to be ratified by Eurostat, NUTS codes for Scotland are shown at LAU1 level.

A summary of the structure, including the numbers of areas for each country at each level, is shown at Annex A.

24. NHS 'IT Clusters'

Directorates of Health and Social Care ceased to exist at the end of June 2003 and five 'IT Clusters' covering England are now used instead on the NSPD. Each of these is a group of Strategic Health Authorities working together by region to implement the NHS's new technology and information systems. Their names and codes are shown below:

IT Cluster name	Code
North East Cluster	Y41
North West and West Midlands Cluster	Y42
Eastern Cluster	Y43
Southern Cluster	Y44
London Cluster	Y45

25. Government Office Regions (GORs)

The nine GORs are the primary statistical subdivisions of England and also the areas in which the Government Offices for the Regions fulfil their role. Each GOR covers a number of local authorities.

26. Standard Statistical Regions (SSRs)

The eight SSRs were the primary statistical subdivisions of England before the GORs (see above) were adopted for this purpose in 1996. They are now rarely used.

27. Training and Enterprise Councils/Local Enterprise Companies (TEC/LECs)

TECs were government-funded bodies which aimed to foster local economic growth and development. They existed across England and Wales, but were replaced in 2001 by Local Learning and Skills Councils (LLSCs) in England, and in Wales by the regional offices of Education and Learning Wales (ELWa).

LECs are government-funded bodies which aim to foster local economic growth and development in Scotland. There are 21 LECs and these cover the whole of Scotland.

28. Travel to Work Areas (TTWAs)

TTWAs are used in labour market analysis and reflect reasonably self-contained zones in which the bulk of the resident population also work. They are built from 1991 electoral wards but no account is taken of local authority boundaries. TTWAs do not however cross national boundaries.

29. National Parks

National parks are designed to conserve the natural beauty and cultural heritage of areas of outstanding landscape value, and to promote public understanding and enjoyment of these areas. There are currently 12 national parks in England and Wales. Of these, ten were designated in the 1950s following the National Parks and Access to the Countryside Act 1949, The Broads (Norfolk/Suffolk) has had a similar status since 1989 and The New Forest was given national park status in 2005. The South Downs is not yet formally a national park but the designation process is underway. In Scotland the National Parks (Scotland) Act was passed in July 2000. The first Scottish national park, Loch Lomond and the Trossachs, was established in July 2002, and the Cairngorms national park was established in March 2003. Their boundaries are not constrained by any other geography.

30. 1998 electoral wards

Electoral wards existing as at the end of 1998 are included on the NSPD. The significance of these codes is that the initial Neighbourhood Statistics data were released for 1998 electoral wards.

31. Urban/rural indicators

England & Wales

The rural and urban classification of postcodes for England and Wales allows datasets to be analysed according to different types of rural and urban area. This is based on the National Statistics Rural and Urban Classification of Output Areas released on 21 July 2004; the product of joint work between the Countryside Agency, Department for Environment, Food and Rural Affairs, Office of the Deputy Prime Minister; National Assembly for Wales and Office for National Statistics.

Postcodes on the NSPD have been assigned to the urban or rural category of the Output Area into which each falls. Output Areas are treated as 'urban' if the majority of the population of an Output Area lives within settlements with a population of 10,000 or more. The remaining 'rural' Output Areas are grouped into three other broad morphological types based on the predominant settlement component – i.e. whether the population density for the output area shows characteristics that are predominantly town and fringe, predominantly village or predominantly dispersed (the latter includes hamlets and isolated dwellings).

The classification also categorises Output Areas based on context – i.e. whether the wider surrounding area of a given output area is sparsely populated or less sparsely populated.

Scotland

The urban/rural classification in Scotland is consistent with the Scottish Executive's core definition of rurality which defines settlements of 3,000 or less people to be rural. It also classifies areas as remote based on drive times from settlements of 10,000 or more people.

Postcodes on the NSPD have been assigned to the urban or rural category on an individual basis, based upon data received from GROS.

Northern Ireland

In Northern Ireland, an eight band categorisation of settlements was introduced in February 2005. These categories range from Band A (Belfast Metropolitan Urban Area) to Band H (Small village, hamlet and open countryside) with bands A – E being classed as 'urban' and bands F – H being classed as 'rural'. The DOE (Department of the Environment for Northern Ireland) Planning Service statutory settlement development limits have been used as the geographical delineation of settlements.

Details of the code ranges are included in the Record Specification (Annex B) and a web link is included at Annex E.

32. Names and codes

The names of all administrative and health areas are the 'standard' names being adopted for use throughout National Statistics. The names are those used in Acts of Parliament and Statutory Instruments to publish changes to the administrative and health geographies.

The codes contained in the NSPD are the corporate ONS codes. In establishing a set of corporate area codes, ONS has adopted the NHS coding scheme for health areas and the codes for other higher area geographies where they are already established and in current use. It is intended that the corporate ONS codes will also

be adopted for use within National Statistics, but it is recognised that many data systems will be dependent on other existing coding systems and that wider acceptance and use of the corporate ONS codes will not be achieved in the short term. To overcome potential coding incompatibility ONS Geography has developed a Standard Names and Codes (SNAC) database containing a matrix look-up between the various coding schemes where links are possible and also an extended list of names and codes for other geographies (e.g. Parliamentary Constituencies):

Standard Names and Codes

Full names and codes listings are supplied with the NSPD. The names and codes for the administrative and health areas and the relationships between the two geographies are included in a Ward:Health matrix that is produced annually to reflect each year's boundary changes.

Ward:Health Matrix

This provides the constitution of each of the 28 strategic health authorities in terms of their constituent local authority districts and electoral wards. The constitutions at local authority district level have been provided by the Department of Health in respect of health authorities in England and by each of the other three UK constituent countries. All appropriate codes are also included.

33. Directory specifications

Annex B lists the specification for the records on the Gridlink[®] NSPD, giving the length and description of each field, the range of possible codes and any qualifying comments. It also provides further general information on each field, such as source, currency and extent of data. For those customers taking the NSPD in .dbf or Access 97 format, the field names are also given.

34. Data formats

Full and extract versions of the NSPD, in a range of data formats, are available on CD-ROM. Details are given in Annex C.

35. Use of the NSPD

The NSPD may be used only within the purchaser's authority or organisation as specified to, and accepted by, ONS Geography Customer Services in writing (see Section 1). Use of the NSPD for any other purpose must be declared to, and agreed by, ONS Geography Customer Services in writing prior to use.

In general terms, purchasers may use the NSPD freely within the purchasing authority/organisation and may also use the data for any activities that are resourced or funded by the purchasing authority/organisation. The purchaser has responsibility for ensuring that the NSPD satisfies their requirements.

Purchasers must obtain permission in writing from ONS Geography Customer Services before transferring the NSPD to a third party.

The information in the NSPD cannot be transferred or published (either in whole or in part), nor certain information derived from the NSPD, unless already agreed, without first obtaining permission in writing from ONS Geography Customer Services.

36. Limitations/data quality

No warranty is given by ONS as to the accuracy or comprehensiveness of the data contained on the NSPD or to the physical condition of the medium on which it is supplied. ONS will take reasonable steps to correct any identified errors and, if appropriate, will re-issue the NSPD without further charge.

Two types of errors may occur in the NSPD - omissions and inaccuracies. With such a large file it is inevitable that some information will be missing. Now that monthly postcode updating procedures are in place the likelihood of missing postcodes is very small. The very latest postcodes (i.e. those introduced between the latest monthly postcode update and the issue of the NSPD) will not be included, but any other missing postcodes are likely to have been absent from Royal Mail's Postcode Address File (PAF) which forms the basis of the Royal Mail monthly input into the NSPD. Missing postcodes should therefore be reported to ONS Geography (see Section 1) for forwarding to Royal Mail.

Inaccuracies also originate from two sources:

Straddling

The addresses forming each small user postcode are not co-terminous with the boundaries of administrative and health areas and other non-postal geographies. The inevitable result is that some postcodes straddle the boundaries of other areas. As each areal reference is generally assigned using the postcode's 1 metre grid reference clipped to the address closest to the postcode mean or the postcode unit mean (see Section 7), some addresses within a postcode may fall in two or more different areas.

It is possible therefore that the majority of addresses in a postcode are assigned to an area on the basis of the postcode's grid reference whereas they actually fall within one or more adjacent areas.

Wrong assignments

Given the necessity to impute 1 metre grid references for new postcodes (most of which will ultimately be replaced by better quality grid references derived from either Ordnance Survey's ADDRESS-POINT® or OSNI®'s Pointer® product) it is likely that the Gridlink® NSPD will always contain some wrong assignments. There will also be instances where accurate postcode grid references are unable to be obtained for other reasons, thus affecting the quality of the area assignments. Quality can be subjectively assessed from the PQIs of the grid references.

In the few instances where imputation techniques are unable to assign grid references to postcodes (usually where the base data are already imputed), it will not be possible to assign postcodes to the range of geographies included on the NSPD.

Customers should also note that the use of the NSPD to allocate individual addresses to geographies might be imprecise because of the effects of straddling and wrong assignments.

Any errors and/or omissions identified by NSPD customers should be notified to ONS Geography Customer Services (see Section 1), who, with the assistance of the appropriate Gridlink Consortium member organisation, will endeavour to:

- investigate all reports of suspected errors and/or omissions to areal references; and
- inform the customer of the outcome of the report within 5 working days of the receipt of the notification if the query can be resolved within ONS.

Corrections and identified omissions to the data content of the NSPD are included on the subsequent NSPD release.

Annex A

NUTS CLASSIFICATION AREAL LEVELS

NUTS (Nomenclature of Units for Territorial Statistics) is a hierarchical classification of spatial units that provides a breakdown of the European Union's territory for producing regional statistics which are comparable across the Union.

N.B. Due to the length of time taken by Eurostat to ratify the NUTS boundaries, and ONS Geography policy of using only boundaries that have been validated, the latest NUTS codes for England and Wales are current to 2003, and Scotland (at LAU1 level) are current to 2004.

A summary of the structure, including the numbers of areas for each country at each level, is shown below.

	England	Wales	Scotland	Northern Ireland	Total
NUTS 1	Government Office Regions (9)	Country (1)	Country (1)	Country (1)	12
NUTS 2	Individual counties or groups of counties/London boroughs/metropolitan districts/unitary authorities (30)	Groups of unitary authorities (2)	Groups of whole/part unitary authorities and/or local enterprise company areas (4)	Country (1)	37
NUTS 3	Individual counties/unitary authorities or groups of counties/London boroughs/metropolitan districts/unitary authorities/county districts (93)	Groups of unitary authorities (12)	Groups of whole/part unitary authorities and/or local enterprise company areas (23)	Groups of district unitary authorities (5)	133
LAU 1	Individual London boroughs/metropolitan districts/unitary authorities/county districts (354)	Individual unitary authorities (22)	Individual or groups of whole/part unitary authorities and/or local enterprise company areas (41)	Individual district unitary authorities (26)	443
LAU 2	Electoral wards/divisions (8,005 ¹)	Electoral divisions (870 ¹)	Electoral wards (1222 ¹)	Electoral wards (582 ¹)	10,679

¹ As at December 2003. The figure for England includes five parishes on the Isles of Scilly, which is not warded; the figure for Scotland includes four LAU2 areas that form two electoral wards.

NSPD RECORD SPECIFICATION

Length	Data description	Range of codes	Comments	Assignment method	Field name
7	Unit postcode – 7 character version	AB1Δ1AA-ZE999ZZ (maximum range)	All current ('live') postcodes within the United Kingdom, the Channel Islands and the Isle of Man, received monthly from Royal Mail. Also, all terminated ('closed') postcodes that have not been subsequently re-used by Royal Mail within the United Kingdom and by the postal administrations in the Channel Islands and the Isle of Man. 2, 3 or 4 character outward code - left aligned; 3 character inward code - right aligned; 3rd and 4th characters may be blank (Δ).		PCD
8	Unit postcode – 8 character version	AB1ΔΔ1AA-ZE99Δ9ZZ (maximum range)	As above, except: 2, 3 or 4-character outward code - left aligned; 3-character inward code - right aligned; 5th character always blank and possibly 3rd and 4th characters blank also (Δ).		PCD2
6	Date of introduction	YYYYMM - year and month	The most recent occurrence of the postcode's date of introduction.		DOINTR
6	Date of termination	YYYYMM - year and month or ΔΔΔΔΔΔ	If present, the most recent occurrence of the postcodes's date of termination, otherwise: ΔΔΔΔΔΔ = 'live' postcode.		DOTERM

Length	Data description	Range of codes	Comments	Assignment method	Field name
2	County	00, 09-47, 95, 99 or ΔΔ	00 = preceding UA code – E, W & S (pseudo); 09-47 = county (England); 95 = Northern Ireland; 99 = Channel Is/IoM (pseudo); ΔΔ = no information available.	Assigned by the Gridlink Consortium	OSCTY
2	Local authority district/unitary authority	AA-MW; UB-UQ: NA-PT; QA-RJ; (maximum ranges) AΔ-ZΔ, ZZ or ΔΔ	AA-MW (UA), UB-UQ (District) = England; NA-PT (UA) = Wales; QA-RJ (UA) = Scotland; AΔ-ZΔ = Northern Ireland; ZZ = Channel Is/IoM (pseudo); ΔΔ = no information available.		OSLAUA
2	(Electoral) ward/division	FA-ZZ; 01-99; (maximum range); 00 or ΔΔ	FA-ZZ = England and Wales; 01-99 = Scotland and Northern Ireland; 00 = Channel Is/IoM (pseudo); ΔΔ = no information available.		OSWARD
1	Postcode user type	0 or 1	0 = small user; 1 = large user. Shows whether the postcode is a small or large user.		USERTYPE

Length	Data description	Range of codes	Comments	Assignment method	Field name
4 or 6	National grid reference - Easting	4 or 6 character numeric grid reference or $\Delta\Delta\Delta\Delta\Delta$ (max)	The Ordnance Survey postcode grid reference Easting to 1 metre or 100 metres resolution; blank for postcodes in the Channel Islands and the Isle of Man. Grid references for postcodes in Northern Ireland relate to the Irish Grid system.	Assigned by the Gridlink Consortium	OSEAST1M OSEAST100M
5 or 7	National grid reference - Northing	5 or 7 character numeric grid reference or $\Delta\Delta\Delta\Delta\Delta\Delta$ (max)	The Ordnance Survey postcode grid reference Northing to 1 metre or 100 metres resolution; blank for postcodes in the Channel Islands and the Isle of Man. Grid references for postcodes in Northern Ireland relate to the Irish Grid system.	Assigned by the Gridlink Consortium	OSNRTH1M OSNRTH100M
1	Grid reference positional quality indicator	1-6, 8-9	Shows the status of the assigned grid reference: 1 = within the building of the matched address closest to the postcode mean; 2 = as for status value 1, except by visual inspection of Landline maps (Scotland only); 3 = approximate to within 50 metres; 4 = postcode unit mean (mean of matched addresses with the same postcode, but not snapped to a building); 5 = imputed by ONS, by reference to surrounding postcode grid references; 6 = postcode sector mean, (mainly PO Boxes); 8 = postcode terminated prior to Gridlink® initiative, last known ONS postcode grid reference ² ; 9 = no grid references available.		OSGRDIND

² Customers taking 1 metre grid references should note that the terminated postcodes with an '8' code are those that were terminated prior to the Gridlink® initiative which became operational in November 2000. The grid references are those assigned by ONS for postcodes in England and Wales and those assigned by the General Register

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Strategic health authority/ health board/ health authority/ health and social services board	Q30-Q39; Q99; SA9-SZ9; YAC-YAF; ZE0-ZW0; or ΔΔΔ	The health area code for the postcode. The field will be blank for postcodes with no grid reference. Q30-Q39 = strategic health authorities in England; Q99 = pseudo health authority code in Wales; S = health boards in Scotland; Y = health authorities in the Channel Is/IoM; Z = health and social services boards in NI; ΔΔΔ = no information available.	Assigned by the Gridlink Consortium via look-up from ward (supplied by ONS)	OSHLTHAU
3	IT Cluster/ Country	Y41-Y45; S00; W00; X00; Z00; or ΔΔΔ	The 'IT Cluster' responsible for the associated strategic health authority for each postcode in England. IT Clusters are now used instead of Directorates for Health and Social Care, which were abolished on 1 July 2003. Pseudo codes are included for Wales, Scotland, Northern Ireland, Channel Islands and Isle of Man. The field will be blank for postcodes with no grid reference. Y = IT Clusters in England; S00 = Scotland (pseudo); W00 = Wales (pseudo); X00 = Channel Is/IoM (pseudo); Z00 = Northern Ireland (pseudo); ΔΔΔ = no information available.	Look-up from Strategic Health Authority	HRO

Office for Scotland and the Department for Economic Development in Northern Ireland for their respective postcodes. Consequently, the grid references for England and Wales will be mainly to 100 metre resolution while the grid references for other parts of the UK will be to 10 metre resolution.

Postcodes terminated since November 2000 retain the same positional quality indicators as they had prior to their termination.

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Country	044, 064, 128, 152, 179 or 220	<p>The code for the appropriate country (i.e. one of the four constituent countries of the United Kingdom or the Channel Islands or the Isle of Man) to which each postcode is assigned.</p> <p>044 = Channel Islands; 064 = England; 128 = Isle of Man; 152 = Northern Ireland; 179 = Scotland; 220 = Wales</p>	Look-up from L.A. District (E, W & S) and look-up from postcode (NI, CI & IoM)	CTRY
1	PO Box/ non-geographic indicator	0-3 or Δ	<p>Shows whether or not a postcode is a PO Box and/or non-geographic (in which case, the postcode would not be expected to have associated areal data):</p> <p>0 = neither PO Box nor non-geographic postcode; 1 = PO Box postcode; 2 = non-geographic postcode; 3 = PO Box and non-geographic postcode; Δ = unknown (mostly terminated postcodes for which a postcode type cannot be identified).</p>		GENIND
1	PAF indicator	1 or Δ	<p>Shows whether the postcode has been received by ONS on Royal Mail's monthly postcode input derived from the Postcode Address File (PAF).</p> <p>1 = postcode yet to appear on Royal Mail's Postcode Address File (PAF); Δ = postcode obtained from PAF.</p>		PAFIND

Length	Data description	Range of codes	Comments	Assignment method	Field name
1	Government Office Region (GOR)	A, B, D-H, J, K, W-Z or Δ	<p>The Government Office Region code for each postcode. Pseudo codes are included for Wales, Scotland, Northern Ireland, Channel Island and Isle of Man. The field will be blank for postcodes with no grid reference.</p> <p>A, B, D-H, J and K = GORs in England; W = Wales (pseudo); X = Scotland (pseudo); Y = Northern Ireland (pseudo); Z = Channel Is/IoM (pseudo); Δ = no information available.</p>	Look-up from county or UA	GOR
1	Standard (statistical) region (SSR)	0-9 or Δ	<p>The Standard Region code for the associated county or unitary authority to which each postcode is assigned. A pseudo code is included for postcodes not in England. For PO Boxes and non-geographic postcodes this field will generally be blank. This field will also be blank for new postcodes for which a grid reference cannot be imputed.</p> <p>1-8 = former standard statistical regions in England; 9 = Wales (pseudo); 0 = postcode not in England or Wales (pseudo); Δ = no information available.</p>	Look-up from county or UA	STREG

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Westminster Parliamentary constituency	001-900 or ΔΔΔ (code range contains gaps)	<p>The Westminster Parliamentary Constituency code for each postcode. Pseudo codes are included for Channel Islands and Isle of Man. The field will be blank for postcodes with no grid reference.</p> <p>001-529 = England; 530-569 = Wales; 801-859 = Scotland (new codes); 701-718 = Northern Ireland; 800 = Channel Islands (pseudo); 900 = Isle of Man (pseudo); ΔΔΔ = no information available.</p>	Point-in-polygon and input from GROS/NI	PCON
2	(European) Electoral Region (EER)	01-12, 99 or ΔΔ	<p>The European Electoral Region code for each postcode. A pseudo code is included for Channel Islands and Isle of Man. The field will be blank for postcodes with no grid reference.</p> <p>01-09 = England; 10 = Wales; 11 = Scotland; 12 = Northern Ireland; 99 = Channel Is/IoM (pseudo); ΔΔ = no information available.</p>	Point-in-polygon	EER

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Training and Enterprise Council/ Local Enterprise Company (TEC/LEC)	001-905, W11-W14, S01-S22, N99, Z99, or ΔΔΔ	<p>The Training and Enterprise Council (in England and Wales) or Local Enterprise Company (in Scotland) code for each postcode. In England, TECs have now been replaced by Learning and Skills Councils, and in Wales by Education and Learning Wales regions. However, the NSPD does not currently contain these new geographies. There are no equivalent areas in Northern Ireland, but pseudo codes are included for Northern Ireland and also for Channel Islands and Isle of Man. The field will be blank for postcodes with no grid reference.</p> <p>001-905 = England; W11-W14 = Wales; S01-S24 = Scotland; N99 = Northern Ireland (pseudo); Z99 = Channel Is/IoM (pseudo); ΔΔΔ = no information available.</p>	Point-in-polygon and input from GROS	TECLEC
3	Travel-to-work area (TTWA)	001-314; 999 or ΔΔΔ	<p>The Travel to Work Area code for the postcode. The field will be blank for postcodes with no grid reference.</p> <p>001-314 = United Kingdom; 999 = Channel Is/IoM (pseudo); ΔΔΔ = no information available.</p> <p>Travel-to-work areas are as defined in 1998 and are based on those electoral ward boundaries existing on 21 April 1991 (Census day).</p>	Point-in-polygon and input from GROS/NI	TTWA

Length	Data description	Range of codes	Comments	Assignment method	Field name
5	Primary Care Trust (PCT) Local Health Board (LHB) Care Trust	5AA△△-5ZZ△△ (maximum range) for PCT; 6A1△△-6C4△△ (maximum range) for LHB; TAC△△, TAK△△, TAL△△, TAM△△; X98△△; △△△△	The code for the Primary Care areas in England and Wales; Primary Care areas do not exist in Scotland or Northern Ireland. Codes are assigned by a 'point-in-polygon' methodology because the underlying electoral ward geography used to define the Primary Care areas have been subject to boundary changes in some instances. A dummy code has been assigned to postcodes in Scotland and Northern Ireland. The field will be blank for postcodes with no grid reference. X98 = Scotland/NI/Channel Is/IoM (pseudo); △△△△ = no information available	Point-in-polygon	PCT

³ Nomenclature of Units for Territorial Statistics, a classification of spatial units used within the UK for producing regional statistics for comparison with other regions within the European Union.

Length	Data description	Range of codes	Comments	Assignment method	Field name
8	1991 Census Enumeration District (ED)	(OGSS ⁴ code range) 01AAFA01-63UEFZ14; 95AΔ0101-95ZΔ1506; 99ZZ0099; or ΔΔΔΔΔΔΔΔ	The code for the 1991 Census ED in which all addresses in a postcode are contained (or the single best-fit ED based on the largest number of 1991 Census households in the postcode split parts) or a single ED identifier for postcodes introduced since the 1991 Census, assigned by a 'point-in-polygon' methodology. A pseudo code is included for Scotland, Channel Islands and Isle of Man. England & Wales = 2-digit county code, 2-digit district code, 2-digit ward code, 2-digit ED code; Northern Ireland = 2-digit county code, 1-digit district code, 2-digit ward code, 2-digit ED code; 99ZZ0099 = Scotland, Channel Is/IoM (pseudo); ΔΔΔΔΔΔΔΔ = no information available.	Point-in-polygon (E, W & NI) and look-up from 1991 Census data (E & W)	PSED
6	1991 Census Enumeration District (ED)	(1991 Census code range) AAFA01- UEFZ14; AΔ0101 – ZΔ1506; ZZ0099; or ΔΔΔΔΔΔ	Same as above except a Census code is provided. England & Wales = 2-digit district code, 2-digit ward code, 2-digit ED code; Northern Ireland = 1-digit district code, 2-digit ward code, 2-digit ED code; ZZ0099 = Scotland, Channel Is/IoM (pseudo); ΔΔΔΔΔΔ = no information available.	Point-in-polygon (E, W & NI) and look-up from 1991 Census data (E & W)	CENED

⁴ Office Geographical Support Service (1991).

Length	Data description	Range of codes	Comments	Assignment method	Field name
1	ED positional quality indicator	0, 1, 2, 6, 9 or Δ	Shows the status of the assigned ED. If there is no indicator (i.e. a blank) and an ED code is provided, the postcode existed at the 1991 Census and the ED code is an original 1991 Census assignment. 0 = original ED assignment using census forms; 1 = assigned by point-in-polygon technique; 2 = imputed on the ED:Postcode link file (where no 1m grid ref is available); 6 = postcode in Northern Ireland; 9 = postcode in Scotland, Channel Islands and Isle of Man; Δ = no information available.		EDIND
4	Address count	0-9999 (maximum range); or ΔΔΔΔ	Numeric count taken from PAF. (Number of addresses excluding small businesses/non-residential.)		ADDRCT
4	Delivery point count	0-9999 (maximum range); or ΔΔΔΔ	Numeric count taken from PAF. (Total number of delivery points.)		DPCT
4	Multiple occupancy count	0-9999 (maximum range); or ΔΔΔΔ	Numeric count taken from PAF. (Count of households that are multi-occupied.)		MOCT
4	Small business count	0-9999 (maximum range); or ΔΔΔΔ	Numeric count taken from PAF. (Number of small businesses.)		SMLBUSCT

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Previous Strategic health authority/ health board/ health authority/ health and social services board	Q01-Q28 (maximum range); Q99; SA9-SZ9; YAC-YAF; ZE0-ZW0; or ΔΔΔ	The health area code for the postcode prior to the NHS reorganisation on 1 July 2006. The field will be blank for postcodes with no grid reference. Q01-Q28 = strategic health authorities in England; Q99 = pseudo health authority code in Wales; S = health boards in Scotland; Y = health authorities in the Channel Is/IoM; Z = health and social services boards in NI; ΔΔΔ = no information available.	Point-in-polygon	OSHAPREV
3	Local Education Authority (LEA)/ Education and Library Board (ELB)	201-938 (code range contains gaps); 660-681; QA-RJ; 951-955; 99Z; or ΔΔΔ	The LEA ⁵ (ELB in Northern Ireland) code for each postcode. A pseudo code is included for Channel Islands and Isle of Man. England = 3 digit numeric LEA code; Wales = 3 digit numeric LEA code; Scotland = 2 char alpha district code; Northern Ireland = 95, single digit numeric ELB code; 99Z = Channel Is/IoM (pseudo); ΔΔΔ = no information available.	Point-in-polygon (E&W) and look-up from L.A. District (NI)	LEA

⁵ Each county, London borough, metropolitan district and unitary authority forms a Local Education Authority. The Isles of Scilly has a Local Education Authority separate from the Authority covering Cornwall.

Length	Data description	Range of codes	Comments	Assignment method	Field name
3	Health Authority 'old-style'	QAA-QZZ* (maximum range); SA9-SZ9; YAC-YAF; ZE0-ZW0; or ΔΔΔ * the last character may be numeric	The 'old-style' health authority existing prior to the reorganisation of health areas (England in 2002, Wales in 2003). Q = health authorities in England and Wales; S = health boards in Scotland; Y = health authorities in Channel Is/IoM; Z = health and social services boards in NI; ΔΔΔ = no information available.	Point-in-polygon	OLDHA

GEOGRAPHY ALLOCATION DIAGRAM

This diagram shows the data supplied to ONS through the Gridlink® process, and the methodology for adding each geography to the NSPD.

- 2001 Census OA (from postcode)
- Super Output Area (from COA)
- Urban/Rural indicator (from COA)
- IT Cluster (from sHA)
- Country (from LAD)
- Government Office Region (from LAD)
- Standard (Statistical) Region (from LAD)
- 1991 Census ED (from Enum Rec Book)
- CAS ward (from COA)

- Non-Census OA
- Parliamentary Constituency
- European Electoral Region
- TEC
- Travel-to-work Area
- Primary Care Trust
- NUTS
- Non-Census ED
- Local Education Authority
- Old Health Authority
- 1991 ward
- 1998 ward
- Statistical ward
- National Park
- Old Primary Care Trust
