OSNI® is a registered trademark of Ordnance Survey of Northern Ireland.

Pointer® is a registered trademark of Ordnance Survey of Northern Ireland.

## 1. Introduction

The National Statistics Postcode Directory (NSPD) Version Notes contain specific information about each quarterly release of the postcode directory, including details of recent changes that have impacted on the data. Various annexes and tables provide more detailed supporting information. ONS Geography also supplies an annual User Guide that contains descriptions of the NSPD, its derived postcode directories and their contents along with information about the methodologies used, data quality and limitations. Both documents are included with the postcode directories as .pdf files.

## 2. News

### 2.1 Postcode Directory name change

For some time ONS has been considering changing the name of the All Fields Postcode Directory (AFPD). The name originated many years ago when we moved to producing an all-encompassing postcode directory rather than the separate directories (Central Postcode Directory, 1991 Frozen Postcode Directory, NHS Postcode Directory and 1991 Enumeration Postcode Directory) produced hitherto. AFPD, as a title, is now less meaningful, has attracted criticism for not meeting customers' expectations and has outlived its usefulness.

Therefore, with effect from May 2006 the postcode directory was re-named as the National Statistics Postcode Directory (NSPD).

The name has been chosen because it is felt that it more fully reflects the production of national statistics which is the prime purpose for which the directory is produced.

### 2.2 Merged SHAs

As part of a re-organisation of the NHS, from 1<sup>st</sup> July 2006, SHAs in England have merged to reduce in numbers from 28 to 10. The current SHA codes (Q01 - Q28) have closed and the new SHA codes range from Q30 - Q39, which were included on the August 2006 NSPD for the first time. However, to ease the transition, the previous codes will continue to be included on the NSPD, in the field 'OSHA PREV' with the pre-2002 codes held in the 'OLDHA' field. Further details can be found in the **User Guide**.

### 2.3 Changes to Output Area (COA) allocation methodology

Over time, the use of the original methodologies to assign Output Areas to postcodes (see **User Guide**) is starting to cause inaccuracies for some allocations. From August 2006, it has therefore been decided to introduce a common 'point-in-polygon' methodology to allocate postcodes to COAs on the NSPD, bringing this geography in line with the majority on the directory. This will have the following benefits:

- Up-to-date allocation for each postcode to the COA boundaries.
- A consistent approach to postcode allocations to COAs in England and Wales.
- A consistent approach to geography allocations across the whole NSPD.
- A direct link between the Gridlink<sup>®</sup> grid reference for each postcode and the COA to which it is allocated.

It is however recognised that some customers have a strong interest in conducting time-series analyses and so the initial frozen 'Census' postcode:COA look-up table will be routinely issued as part of the NSPD metadata to allow such work to continue without any adverse impact.

## 2.4 Change of COMPAS® to Pointer® (Northern Ireland)

Pointer® is new address database that has been developed for Northern Ireland with the joint support of Ordnance Survey of Northern Ireland (OSNI®), the Valuation & Lands Agency (VLA) and Royal Mail. It has been created through a process of complex data matching and intensive ground validation across Northern Ireland in order to maximise the accuracy of the dataset.

There is now a common standard address for every property in Northern Ireland. Each property has a unique reference number and geo-spatial coordinates, and the mean of these coordinates have now been incorporated, for each postcode, into the Gridlink® dataset and the NSPD from May 2006.

Included in the 'Documents' folder is an Excel spreadsheet which details the changes to each postcode and includes both the old and new grid references.

Further details can be obtained from the [OSNI® website](#)

## 2.5 Changes to SHA and PCT pseudo codes

From February 2006, the SHA pseudo code has been changed to 'Q99' from 'X98' and the PCT pseudo code has been changed to 'X98' from '49998' in line with NHS codes. However, the length of the PCT field currently remains unchanged at 5 characters. Further details can be found in the **User Guide**.

## 2.6 Allocation of intermediate geography codes (Scotland)

An error was discovered by GROS in the program that realigns their postcode grid references with Gridlink® centroids supplied by Ordnance Survey, and determines their higher area values. As a result about 13,000 postcodes in the version of the Scottish Postcode Index that was supplied for use in the August 2005 to February 2006 AFPDs had an incorrect value assigned for Intermediate Geography. No other field was affected by the error. Customers requiring amended data should contact [geographycustomerservices@gro-scotland.gsi.gov.uk](mailto:geographycustomerservices@gro-scotland.gsi.gov.uk).

## 2.7 Output Area (COA) classification

The 2001 area classification of COAs is included on the NSPD from May 2006. This classification is used to group together geographic areas according to key characteristics common to the population in that grouping. These groupings are called clusters, and are derived using 2001 population census data. This is a new classification produced using the same principles but a different statistical methodology from that used to produce the other area classifications. The classification was originally produced with lower case characters which have been converted to upper case for consistency purposes on the NSPD. Further details can be found in the **User Guide**.

## 2.8 PCT changes

From 1<sup>st</sup> October 2006, the reorganisation of Primary Care areas has reduced the number from 303 (including four Care Trusts) to 152 (including four Care Trusts). Also with effect from 1<sup>st</sup> October 2006, Solihull PCT (5D1) became Solihull Care Trust (TAM) and Witham, Braintree and Halstead ceased to exist as a Care Trust (TAG). The previous PCT codes are also included on the NSPD for convenience, in the field 'OLDPCT'.

### 3. Changes to postcode content

#### 3.1 Postcode counts and currency

The November 2006 NSPD contains 2,412,882 postcodes within the United Kingdom, the Channel Islands and the Isle of Man. They are current to October 2006 and include both live and terminated postcodes.

Table 1 shows the split between large and small users by country, and the change in the numbers of postcodes since the August 2006 NSPD.

Table 2 shows the numbers of postcodes, postcode sectors and postcode districts by postcode area.

Table 3 shows the numbers of postcodes assigned grid references by positional quality indicator, country and user type.

Table 4 shows the numbers of terminated postcodes.

#### 3.2 Postcode reorganisations

Royal Mail issue bi-annual lists of postcode reorganisations in their 'Update' series. The latest issue is 'Update 43' which contained some postcode reorganisations, mostly in the Cambridge area. Details can be found at Royal Mail's website: [Royal Mail Postcode Updates](#)

### 4. Currency of the administrative and health geographies

The November 2006 NSPD relates current postcodes in the United Kingdom to May 2006 electoral and administrative area boundaries, and to July 2006 health areas and October 2006 Primary Care areas.

### 5. Contacts

Further information about the availability and contents of this issue of NSPD (and other directories) can be obtained from:
