NOTES:

The interview was conducted using Computer Assisted Personal Interviewing (CAPI), in which interviewers read questions from and enter data directly into a laptop computer. The script for the interview uses a variety of 'textfills' to customise question wording so that it is appropriate to individual circumstances. For example, the script will substitute either 'husband', 'wife' or 'partner' depending on the gender of the interviewee and/or the nature of their relationship.

All textfills are signalled in the paper questionnaire by the character '^'. For example, wherever the text reads *^he*, the computer will substitute the appropriate pronoun; wherever the text reads *^childname*, the computer will substitute the child's actual name.

Questions will also be routed on key variables – e.g. gender of participant, whether they are part of a lone or two-parent household, etc. Key routing is indicated.
