Assessment of psychiatric disorders – additional detail

Contents
For most of the disorders and behaviours covered in this report the methods section of the relevant chapter fully describes the assessment variables and process. Additional details are provided in this Appendix for three chapters. These are where the number of questions involved in the scoring was too great to list in the substantive chapter or where detailed algorithms were involved.

A1 Common mental disorders (Chapter 2)
A2 Antisocial and borderline personality disorders (Chapter 6)
A3 Alcohol misuse and dependency (Chapter 9)
A1 Common mental disorders

The process of assessment of common mental disorder (CMD) is given in the methods section of Chapter 2. The information below supplements this description with details of the items and the combinations required for:

- calculation of CIS-R symptom scores;
- calculation of total CIS-R scores;
- algorithms for production of ICD-10 diagnoses; and
- grouping ICD-10 diagnoses into broad categories.

A1.1 Calculation of CIS-R symptom scores

Calculation of symptom score for somatic symptoms
Score one for each of:
- Noticed ache or pain/discomfort for four days or more in the past seven days.
- Ache or pain/discomfort lasted more than three hours on any day in the past week/on that day.
- Ache or pain/discomfort has been very unpleasant in the past week.
- Ache or pain/discomfort has bothered you when you were doing something interesting in the past week.

Calculation of symptom score for fatigue
Score one for each of:
- Felt tired/lacking in energy or four days or more in the past seven days.
- Felt tired for more than three hours in total on any day in past week.
- Felt so tired/lacking in energy that you’ve had to push yourself to get things done on at least one occasion during the past week.
- Felt tired/lacking in energy when doing things you enjoy or used to enjoy at least once during past week.

Calculation of symptom score for concentration and forgetfulness
Score one for each of:
- Noticed problems with concentration/memory for four days or more in the past week.
- Could not always concentrate on a TV programme, read a newspaper article or talk to someone without mind wandering in past week.
- Problems with concentration actually stopped you from getting on with things you used to do or would like to do.
- Forget something important in past seven days.

Calculation of symptom score for sleep problems
Score one for each of:
- Had problems with sleep for four nights or more out of past seven.
- Spent at least a quarter of an hour trying to get to sleep on the night with least sleep in the past week.
- Spent at least one hour trying to get to sleep on the night with the least sleep.
- Spent three or more hours trying to get to sleep on four nights or more in the past week.
- Slept at least for a quarter of an hour longer than usual sleeping on the night you slept longest.
- Slept for one hour or more longer than usual sleeping on the night you slept longest.
- Slept for more than three hours longer than usual on four nights or more in past week.

Calculation of symptom score for irritability
Score one for each of:
- Felt irritable or short tempered/angry on four days or more.
- Felt irritable or short tempered/angry for more than one hour on any day in past week.
- Felt so irritable or short tempered/angry that you wanted to shout at someone in past week (even if you hadn’t actually shouted).
• Had arguments, rows or quarrels or lost your temper with someone in past seven days and felt it was unjustified on at least one occasion.

**Calculation of symptom score for worry about physical health**

Score one for each of:
- Worried about physical health/serious physical illness on four days or more in past seven days.
- Felt that you had been worrying too much, in view of actual health.
- Worrying had been very unpleasant in past week.
- Not able to take mind off health worries at least once by doing something else in past week.

**Calculation of symptom score for depression**

Score one for each of:
- Unable to enjoy or take an interest in things as much as usual in past week.
- Felt sad, miserable or depressed/unable to enjoy or take an interest in things on four days or more in the past week.
- Felt, sad, miserable or depressed/unable to enjoy or take an interest in things for more than three hours in total on any day in past week.
- When sad, miserable or depressed you did not become happier when something nice happened, or when in company.

**Calculation of symptom score for depressive ideas**

Score one for each of:
- Felt guilty or blamed yourself when things went wrong when it hasn’t been your fault at least once in past seven days.
- Felt that you are not as good as other people during past week.
- Felt hopeless, for instance about your future, during the past seven days.
- Felt that life isn’t worth living in past week.
- Thought of killing yourself in the past week.

**Calculation of symptom score for worry**

Score one for each of:
- Been worrying about things other than physical health on four or more days out of past seven days.
- Have been worrying too much in view of your circumstances.
- Worrying has been very unpleasant in past week.
- Have worried for more than three hours in total on any of past seven days.

**Calculation of symptom score for anxiety**

Score one for each of:
- Felt generally anxious/nervous/tense on four or more of past seven days.
- Anxiety/nervousness/tension has been very unpleasant in past week.
- When anxious/nervous/tense, have had one or more of following symptoms:
  - heart racing or pounding;
  - hands sweating or shaking;
  - feeling dizzy;
  - difficulty getting your breath;
  - butterflies in your stomach;
  - dry mouth; or
  - nausea or feeling as though you wanted to vomit.
- Felt anxious/nervous/tense for more than three hours in total in any one of past seven days.

**Calculation of symptom score for phobias**

Score one for each of:
- Felt nervous/anxious about (situation/thing) four or more times in past seven days.
• On occasions when felt anxious/nervous/tense, had one or more of the following symptoms:
  - heart racing or pounding;
  - hands sweating or shaking;
  - feeling dizzy;
  - difficulty getting your breath;
  - butterflies in your stomach;
  - dry mouth; or
  - nausea or feeling as though you wanted to vomit.
• Avoided situation or thing because it would have made you anxious/nervous/tense once in past seven days.
• Avoided situation or thing four times or more because it would have made you anxious, nervous or tense.

Calculation of symptom score for panic
Score one for each of:
• Anxiety or tension got so bad you got in panic (e.g. felt that you might collapse or lose control unless you did something about it) once in past week.
• Anxiety or tension got so bad you got in panic more than once.
• Feelings of panic have been very unpleasant or unbearable in past week.
• This panic/worst of these panics lasted longer than 10 minutes.

Calculation of symptom score for compulsions
Score one for each of:
• Found yourself doing things over again (that you had already done) on four days or more in past week.
• Have tried to stop repeating behaviour/doing these things over again during past week.
• Repeating behaviour/doing these things over again made you upset or annoyed with yourself in past week.
• Repeated behaviour three or more times during past week.

Calculation of symptom score for obsessions
Score one for each of:
• Unpleasant thoughts or ideas kept coming into your mind on four days or more in past week.
• Tried to stop thinking any of these thoughts in past week.
• Became upset or annoyed with yourself when you have had these thoughts in past week.
• Longest episode of having such thoughts was a quarter of an hour or longer.

A1.2 Calculation of total CIS-R scores
The total CIS-R score used in this report was obtained by summing the symptom scores described above. This total score reflects the overall severity of neurotic symptoms and can range from zero to 57. For the presentation of data in this report the scores are grouped into four groups: 0 – 5; 6 – 11; 12 – 17; 18 and over. A score of 12 and over indicates significant levels of neurotic symptoms and can be considered the threshold score for assigning an assessment of neurotic disorder. A score of 18 and over suggests a level of symptoms likely to require treatment.

A1.3 Algorithms for production of ICD-10 diagnoses
The common mental disorders reported in Chapter 2 were also produced from the CIS-R schedule (reproduced as part of the questionnaire in Appendix D). The production of the six categories of disorder shown in Chapter 2 occurred in two stages: first, the respondents’ responses to the CIS-R were used to produce specific ICD-10 diagnoses of neurosis. This was done by applying the algorithms described below. Second, the range of ICD-10 diagnoses were grouped together to produce the six categories used in the calculation of prevalence. No hierarchical rules were applied.
F32.00 Mild depressive episode without somatic symptoms

1. Symptom duration ≥2 weeks

2. Two or more from:
   - Depressed mood
   - Loss of interest
   - Fatigue

3. Two or three from:
   - Reduced concentration
   - Reduced self-esteem
   - Ideas of guilt
   - Pessimism about future
   - Suicidal ideas or acts
   - Disturbed sleep
   - Diminished appetite

4. Social impairment

5. Fewer than four from:
   - Lack of normal pleasure /interest
   - Loss of normal emotional reactivity
   - A.M. waking ≥2 hours early
   - Loss of libido
   - Diurnal variation in mood
   - Diminished appetite
   - Loss of ≥5% body weight
   - Psychomotor agitation
   - Psychomotor retardation

F32.01 Mild depressive episode with somatic symptoms

1. Symptom duration ≥2 weeks

2. Two or more from:
   - Depressed mood
   - Loss of interest
   - Fatigue

3. Two or three from:
   - Reduced concentration
   - Reduced self-esteem
   - Ideas of guilt
   - Pessimism about future
   - Suicidal ideas or acts
   - Disturbed sleep
   - Diminished appetite

4. Social impairment

5. Four or more from:
   - Lack of normal pleasure/interest
   - Loss of normal emotional reactivity
   - A.M. waking ≥2 hours early
   - Loss of libido
   - Diurnal variation in mood
- Diminished appetite
- Loss of ≥5% body weight
- Psychomotor agitation
- Psychomotor retardation

**F32.10 Moderate depressive episode without somatic symptoms**

1. Symptom duration ≥2 weeks

2. *Two or more* from:
   - Depressed mood
   - Loss of interest
   - Fatigue

3. *Four or more* from:
   - Reduced concentration
   - Reduced self-esteem
   - Ideas of guilt
   - Pessimism about future
   - Suicidal ideas or acts
   - Disturbed sleep
   - Diminished appetite

4. Social impairment

5. *Fewer than four* from:
   - Lack of normal pleasure /interest
   - Loss of normal emotional reactivity
   - A.M. waking ≥2 hours early
   - Loss of libido
   - Diurnal variation in mood
   - Diminished appetite
   - Loss of ≥5% body weight
   - Psychomotor agitation
   - Psychomotor retardation

**F32.11 Moderate depressive episode with somatic symptoms**

1. Symptom duration ≥2 weeks

2. *Two or more* from:
   - Depressed mood
   - Loss of interest
   - Fatigue

3. *Four or more* from:
   - Reduced concentration
   - Reduced self-esteem
   - Ideas of guilt
   - Pessimism about future
   - Suicidal ideas or acts
   - Disturbed sleep
   - Diminished appetite
5. Four or more from:
- Lack of normal pleasure /interest
- Loss of normal emotional reactivity
- A.M. waking ≥ 2 hours early
- Loss of libido
- Diurnal variation in mood
- Diminished appetite
- Loss of ≥ 5% body weight
- Psychomotor agitation
- Psychomotor retardation

F32.2 Severe depressive episode

1. All three from:
- Depressed mood
- Loss of interest
- Fatigue

2. Four or more from:
- Reduced concentration
- Reduced self-esteem
- Ideas of guilt
- Pessimism about future
- Suicidal ideas or acts
- Disturbed sleep
- Diminished appetite

3. Social impairment

4. Four or more from:
- Lack of normal pleasure /interest
- Loss of normal emotional reactivity
- A.M. waking ≥ 2 hours early
- Loss of libido
- Diurnal variation in mood
- Diminished appetite
- Loss of ≥ 5% body weight
- Psychomotor agitation
- Psychomotor retardation

F40.00 Agoraphobia without panic disorder

1. Fear of open spaces and related aspects: crowds, distance from home, travelling alone
2. Social impairment
3. Avoidant behaviour must be prominent feature
4. Overall phobia score ≥ 2
5. No panic attacks

F40.01 Agoraphobia with panic disorder

1. Fear of open spaces and related aspects: crowds, distance from home, travelling alone
2. Social impairment
3. Avoidant behaviour must be prominent feature
4. Overall phobia score ≥ 2
5. Panic disorder (overall panic score ≥ 2)
F40.1 Social phobias

1. Fear of scrutiny by other people: eating or speaking in public etc.
2. Social impairment
3. Avoidant behaviour must be prominent feature
4. Overall phobia score $\geq 2$

F40.2 Specific (isolated) phobias

1. Fear of specific situations or things, e.g. animals, insects, heights, blood, flying etc.
2. Social impairment
3. Avoidant behaviour must be prominent feature
4. Overall phobia score $\geq 2$

F41.0 Panic disorder

1. Criteria for phobic disorders not met
2. Recent panic attacks
3. Anxiety-free between attacks
4. Overall panic score $\geq 2$

F41.1 Generalised anxiety disorder

1. Duration $\geq 6$ months
2. Free-floating anxiety
3. Autonomic overactivity
4. Overall anxiety score $\geq 2$

F41.2 Mixed anxiety and depressive disorder

1. (Sum of scores for each CIS-R section) $\geq 12$
2. Criteria for other categories not met

F42 Obsessive-compulsive disorder

1. Duration $\geq 2$ weeks
2. At least one act/thought resisted
3. Social impairment
4. Overall scores: obsession score $\geq 4$, or compulsion score $\geq 4$, or obsession + compulsion scores $\geq 6$

A1.4 Grouping ICD-10 diagnoses into broad categories

Depression
As with the preceding survey, F32.00 and F32.01 were grouped to produce mild depressive episode (i.e. with or without somatic symptoms). F32.10 and F32.11 were similarly grouped to produce moderate depressive episode. Mild depressive episode, moderate depressive episode and severe depressive episode (F32.2) were then combined to produce the final category of depressive episode.

All phobias
The ICD-10 phobic diagnoses F40.00, F40.01, F40.1 and F40.2, were combined into one category of phobia. This is in line with the preceding surveys.

Categories for analysis
This process produced six categories of CMD for analysis:
• Mixed anxiety and depressive disorder;
• Generalised anxiety disorder;
• Depressive episode;
• All phobias;
• Obsessive compulsive disorder; and
• Panic disorder.

A2 Antisocial and borderline personality disorders

Full details of the assessment of borderline personality disorder (BPD) and antisocial personality disorder (ASPD) are given in the methods section of Chapter 6. The tables below supplement this description with details of the phase one items used to produce the personality disorder screening scores, which informed the assignment of phase two sampling fractions.

Phase one SCID-II self-completion screen

The question names shown in the tables below (e.g. ‘pd73’, ‘pd74’) refer to the question names used in the phase one questionnaire (reproduced in Appendix D). These are the questions used to assess each diagnostic criterion for BPD, conduct disorder and adult antisocial personality. A diagnosis of ASPD required both conduct disorder and adult antisocial personality to be present.

### BPD: scored items in the SCID-II self-completion (phase one)

<table>
<thead>
<tr>
<th></th>
<th>Question</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Frantic efforts to avoid real or imagined abandonment</td>
</tr>
<tr>
<td>2</td>
<td>A pattern of unstable and intense interpersonal relationships characterised by alternating between extremes of idealisation and devaluation</td>
</tr>
<tr>
<td>3</td>
<td>Identity disturbance: markedly and persistently unstable self-image or sense of self</td>
</tr>
<tr>
<td>4</td>
<td>Impulsivity in at least 2 areas that are potentially self-damaging (e.g. spending, sex, substance abuse, reckless driving, binge eating)</td>
</tr>
<tr>
<td>5</td>
<td>Recurrent suicidal behaviour, gestures, or threats, or self-mutilating behaviour</td>
</tr>
<tr>
<td>6</td>
<td>Affective instability due to a marked reactivity of mood (e.g. intense episodic dysphoria, irritability or anxiety, usually lasting a few hours and only rarely more than a few days)</td>
</tr>
<tr>
<td>7</td>
<td>Chronic feelings of emptiness</td>
</tr>
<tr>
<td>8</td>
<td>Inappropriate, intense anger or difficulty controlling anger (e.g. frequent displays of temper, constant anger, recurrent physical fights)</td>
</tr>
<tr>
<td>9</td>
<td>Transient, stress-related paranoid ideation or severe dissociative symptoms</td>
</tr>
</tbody>
</table>
A3 Alcohol misuse and dependence

Details of the assessment of alcohol misuse and dependence are given in the methods section of Chapter 9. The information given below provides additional detail on the questions and scoring of the tools used to assess for alcohol misuse and dependence.

A3.1 Scoring the Alcohol Use Disorders Identification Test (AUDIT)

The Alcohol Use Disorders Identification Test (AUDIT) was used for the assessment of alcohol misuse. This provides a score based on a series of questions covering different aspects of drinking behaviour as shown below.

1. How often do you have a drink containing alcohol?
   Never (0)
   Monthly or less (1)
   Two to four times a month (2)
   Two to three times a week (3)
   Four or more times a week (4)
2. How many drinks containing alcohol do you have in a typical day when you are drinking?
   1 or 2 (0)
   3 or 4 (1)
   5 or 6 (2)
   7 to 9 (3)
   10 or more (4)

3. How often do you have six or more drinks on any one occasion?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

4. How often during the last year have you found that you were not able to stop drinking once you had started?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

5. How often during the last year have you failed to do what was normally expected of you because of drinking?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

6. How often during the last year have you needed a first drink in the morning to get yourself going after a heavy drinking session?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

7. How often during the last year have you had a feeling of guilt or remorse after drinking?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

8. How often during the last year have you been unable to remember what happened the night before because you had been drinking?
   Never (0)
   Less than monthly (1)
   Monthly (2)
   Weekly (3)
   Daily or almost daily (4)

9. Have you or someone else been injured because of your drinking?
   No (0)
   Yes, but not in the last year (2)
   Yes, during the last year (4)
10. Has a relative, friend, doctor or other health worker been concerned about your drinking or suggested that you should cut down?
   No (0)
   Yes, but not in the last year (2)
   Yes, during the last year (4)

Scoring
The total score is computed across all 10 items and the threshold score to indicate hazardous drinking behaviour was deemed to be 8.

A3.2 Assessment of alcohol dependence using the SADQ-C

People who scored 10 or more on the AUDIT questionnaire then completed the Severity of Alcohol Dependence Questionnaire – Community (SADQ-C). This was completed using computer assisted self interviewing. The SADQ-C is comprised of 20 questions, the exact wording of which can be found in the survey questionnaire reproduced in Appendix D. It is a modified version of the SAD-Q, which was used in the APMS 2000 survey.

Responses to each question are given a score from 0 to 3. A total score is then computed by adding the scores for all items. An assessment of level of alcohol dependence is then made based on the total score as follows:

- Score 0 to 3 = no dependence;
- Score 4 to 19 = mild dependence;
- Score 20 to 34 = moderate dependence; and
- Score 35 to 60 = severe dependence.

People who did not complete the SADQ-C because they had an AUDIT score of less than 10 were assessed as having no dependence and assigned an SADQ-C score of zero.
B1.1 About Latent Class Analysis

Latent class analysis (LCA) is a statistical technique for finding subtypes of related cases (latent classes) from multivariate categorical data. The analysis fits a model to the data that (a) identifies a given number of latent classes, and (b) generates probabilities, for each respondent, of their being in each class (one probability per class). Respondents are then assigned to the class for which they have the highest probability. In this way, as with cluster analysis, it divides individual cases in a dataset into discrete non-overlapping groups.

Applied to the APMS dataset, LCA allows us to investigate whether there are discrete groups of people who share recognisable combinations of psychiatric conditions. Once groups such as these are found, the analysis generates a probability for each respondent of their being in each class and assigns them to the class for which they have the highest probability of membership. Once this is done it is straightforward to relate membership of each class to respondents’ answers to these and other survey questions.

The data was modelled using the package LatentGOLD. A typical analysis involved fitting several models with different numbers of classes. It was then possible to write SPSS syntax to compare different models – for example to compare a model containing five classes with one containing six. This allowed us to identify the most useful model.

In Chapter 12 we describe the findings of the LCA modelling.

B1.2 Modelling the data

Fifteen binary variables were used as input to the LCA. They each defined the presence/absence of one the following conditions:

- Generalised anxiety disorder in the past week;
- Mixed anxiety/depressive disorder in the past week;
- Obsessive compulsive disorder in the past week;
- Depressive episode in the past week;
- Panic disorder or any phobia in the past week;
- Alcohol dependency in the past six months;
- Drug dependency in the past year;
- Psychotic disorder in the past year;
- Borderline personality disorder (BPD) in the past year;
- Antisocial personality disorder (ASPD) in the past year;
- Posttraumatic stress disorder (PTSD) in the past week;
- Attention deficit hyperactivity disorder (ADHD) in the past six months;
- Eating disorder in the past year;
- Problem gambling in the past year; and
- Suicide attempt in the past year.

This dataset is sparse: there are $2^{15} (32,768)$ possible patterns of answers but only 7,404 respondents, the majority of whom have no psychiatric conditions, therefore only a small proportion of the possible response patterns are attained. A consequence of this is that many of the standard test statistics produced by LCA packages to evaluate and compare models with different number of classes are not valid. We therefore had to rely more heavily on subjective criteria in choosing the number of classes for our final model.

### B1.3 Dealing with missing cases

LCA does not allow cases with any missing data to be used in the modelling. Of the 7,404 respondents in total, just over 85% (6,346 respondents) had complete data (i.e. were non-missing on all fifteen analysis variables). The remaining respondents were missing data for between one and seven conditions (with most respondents missing either on one or two conditions with decreasing frequency thereafter so that only a handful were missing on six or seven conditions).

In some types of multivariate analysis losing 15 percent of your sample might not be considered problematic in drawing adequate conclusions about relationships in a dataset. However, in this case it was clear that the removal of cases with missing values would reduce the available response patterns thereby compromising our search for patterns of comorbidity.

Respondents had missing values for a variety of reasons such as: being a partial respondent (i.e. not completing the full interview, including those who did not do the self-completion component), or responding ‘don’t know’ or refusing to answer a question required for a diagnostic outcome.

It was decided that those with missing values on four or more conditions (26 respondents in total) should be excluded from the analysis, whilst reasonable steps should be taken to replace the missing values on the remaining cases.

While there are many possible approaches to imputing missing data, any approach which predicts the presence, rather than absence of a condition, would be difficult to defend. We felt it more prudent to err on the side of assuming the absence of a condition where information was missing. Therefore, where a condition has very low prevalence in the data - for example, BPD and ASPD - it seemed reasonable to recode a missing value as ‘not present’. However, we needed to find an appropriate prevalence ‘cut-off’ for applying this rule.

In replacing missing values in this way, there is clearly a trade-off between including more cases on the one hand and imputing ‘incorrectly’ on the other. A cut-off of one percent seemed to achieve an ideal balance between these two competing criteria: there was little to be gained - in terms of the number of additional respondents – by increasing this cut-off to two percent, while decreasing it to 0.5 percent would have involved losing nearly 400 extra cases.

The following conditions had a prevalence of less than one percent:
- BPD;
- ASPD;
- Suicide attempt;
- Problem gambling;
- Psychosis; and
- ADHD.
Therefore we replaced all missing values on these variables with zero, indicating absence of the condition. Additionally, although it’s prevalence was around 3 percent, we also replaced some of the missing values on PTSD in the same manner. This was done for respondents who answered ‘don’t know’ to the question on whether they had had a major trauma, on the assumption that if they did not know whether or not they had had one, then they had probably not.

Replacing missing values where possible in this way increased the percentage of our sample available for LCA from 85% to 99% of all respondents.

**B1.4 Identifying the number of classes**

As part of a latent class analysis we need to identify the number of classes. In practice, it is unlikely that there will be a single ‘correct’ model so it is usual to consider a range of possible models containing different numbers of classes and choose the most appropriate using some criteria.

A general approach to statistical model fitting is to try to balance the fit and the parsimony of a model – generally if two models fit a data set equally well the one with fewer parameters will be chosen. Under this principle, in LCA, if a model with k+1 classes fits the data just as well as one with k classes the k-class model will be chosen.

LCA software packages such as Latent GOLD provide the analyst with statistics to help in the choice of the correct number of classes in the data. In particular it provides several goodness-of-fit statistics to help decide on an appropriate model; a formal hypothesis test can also be performed to see if a k+1-class model is an improvement on a k-class model.

However, as mentioned above the p-values calculated by the package are not valid when analysing a dataset as sparse as the APMS data. Furthermore, the size of the dataset (15 variables) is large enough to mean that the significance tests might not be very powerful. Even when classes display a large difference on one or two variables the overall significance test will be found to be “not significant” if the classes are similar on the other variables.

This means that rather than choosing a model on the basis of the p-values obtained from a formal hypothesis test, we used a more informal method of assessment.

First, Latent GOLD was used to fit models with varying numbers of classes, in this case those with between two and eight classes. Goodness-of-fit statistics were then examined for each of the models. These statistics allowed us to rule out certain models as having too poor a fit to be considered, and also gave an approximate upper limit for the number of classes that needed to be considered.

The choice between these was then made on the basis of several less formal considerations:

- The most important of these was interpretability of the classes. A model with k interpretable classes was preferred to one with (k+1) classes where one or more of the classes was not recognisable in clinical terms.

- We assigned respondents to clusters (using modal assignment) and examined how the composition of the clusters changed as we moved from one solution (with k clusters) to the next (k+1 clusters). This allowed us to examine the stability of the models and to understand how new clusters formed and from which clusters in the previous solution.

- We considered the sizes of the clusters. In this case we expected to have one or two relatively small groups comprising those with multiple conditions. However, a model with several very small groups would be neither stable nor interpretable.

- We examined membership probabilities, in particular the probability that a respondent belongs to the cluster to which he/she has been assigned. Ideally each individual would have a fitted probability of 1 of being in their assigned group but in reality this figure is lower.
We found that all clusters in all models with up to six clusters were interpretable but once seven clusters was reached, the “new” cluster was not recognisable. We also found that when we looked at the seven cluster solution, the new cluster which appeared was much less robust than the rest in terms of the average probability of membership. Again this suggested that a six cluster solution was more appropriate for the data.

When we looked at the change in the composition of cluster membership we found that each successive solution added a new cluster from the remnants of one or more of the previous clusters but apart from this the remaining clusters were relatively stable. The six cluster solution produced a new cluster (not present in the five cluster solution), which, although very small, clearly represents those individuals with very high levels of co-morbidity who would otherwise be subsumed into cluster four. For this reason, having ruled out the seven cluster solution, six clusters was preferred to five.

### B1.5 Classifying individuals and describing classes

Once a working model has been chosen, the analyst will usually try to relate membership of each class with the respondent’s answers to each question and thus describe each class.

One method of doing this is to examine the parameter estimates obtained by the model. Latent GOLD estimates the probability associated with each class for its answers to each question. For example, a member of cluster four has a 22% probability of having alcohol dependency, whereas a member of cluster two has only a 5% probability of this. Thus, cluster four will be more associated with alcohol dependency than cluster two.

Another method is to examine the responses rather than the parameters. This method requires respondents to be assigned to their modal class and hence does not take into account the uncertainty concerning class membership.

Either of these methods can be used to help describe classes. The first method has the advantage that it does not require that individuals are assigned to clusters. On the other hand, the second method might be preferable as its class labels are based on descriptions of a real sample rather than estimates of parameters (many of which could have quite large standard errors).

We used the first method when comparing the interpretability of solutions with different numbers of classes. However, once we had chosen our final solution we assigned respondents to clusters and treated the resulting variable like any other analysis variable when comparing the characteristics of each cluster.
Appendix C

Derived variables used in the main report

Contents

C1 Socio-demographic variables
C2 Neurotic symptoms and common mental disorders
C3 Trauma and posttraumatic stress disorder
C4 Suicidal thoughts, suicide attempts and self-harm
C5 Psychosis
C6 Antisocial and borderline personality disorders
C7 Attention deficit hyperactivity disorder
C8 Eating disorders
C9 Alcohol misuse and dependence
C10 Drug use and dependence
C11 Gambling behaviour
C12 Psychiatric comorbidity
C13 Methods and other variables
C14 Psychoactive medication currently used
C15 Talking therapies and service use
C16 Variables accounting for survey method

Detailed and current documentation for all the archived variables will be available from the UK Data Archive when the APMS 2007 dataset is deposited (see www.data-archive.ac.uk/).

C14 TALKING THERAPIES AND SERVICE USE

DOCWKS
Spoken with GP in past two weeks about a mental or emotional problem
Value Label
1 Yes
2 No

DOCPSYC
Spoken with GP in past year about a mental or emotional problem
Value Label
1 Yes
2 No

INQTRMEN
Inpatient stay in past quarter for a mental or emotional problem
Value Label
1 Yes
2 No

OUTQTRME
Outpatient visit in past quarter for a mental or emotional problem
Value Label
1 Yes
2 No

PSYCTHER
Currently having psychotherapy, psychoanalysis, individual or group therapy
Value Label
1 Yes
2 No

COGTHHER
Currently having behaviour or cognitive therapy
Value Label
1 Yes
2 No

ARTTHER
Currently having art, music or drama therapy
Value Label
1 Yes
2 No

SOCTRAIN
Currently having social skills training
Value Label
1 Yes
2 No

MARIHER
Currently having marital or family therapy
Value Label
1 Yes
2 No

SEXTHER
Currently having sex therapy
Value Label

(May I ask, is English your first language?)
1 Yes
2 No

APMS 2007 | APPENDIX D: PHASE ONE QUESTIONNAIRE AND PHASE TWO CONTENTS
SF6
During the past 4 weeks, have you accomplished less than you would like with your work or other regular daily activities as a result of any emotional problems (such as feeling depressed or anxious)?
1. Yes
2. No

SF7
And during the past 4 weeks, did you work or do other activities less carefully than usual as a result of your emotional health?
1. Yes
2. No

SF8
SHOWCARD A
During the past four weeks, how much did pain interfere with your normal work (including work outside the home and housework)?
RUNNING PROMPT
1. not at all,
2. a little bit,
3. moderately,
4. quite a bit,
5. or extremely?

SF9
SHOWCARD B
For each of the following questions, please look at this card and give the one answer that comes closest to the way you have been feeling.
How much of the time during the past 4 weeks have you felt calm and peaceful?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

SF10
SHOWCARD B
And how much of the time during the past 4 weeks did you have a lot of energy?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

SF11
SHOWCARD B
And how much of the time during the past 4 weeks have you felt downhearted and low?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

Fullife
SHOWCARD B
And how much of the time during the past 4 weeks have you felt full of life?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

Worn
SHOWCARD B
And how much of the time during the past 4 weeks did you feel worn out?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

Tired
SHOWCARD B
And how much of the time during the past 4 weeks did you feel tired?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

SF12
SHOWCARD B
During the past 4 weeks how much of the time has your physical health or emotional problems interfered with your social activities (like visiting friends or relatives)?
1. All of the time
2. Most of the time
3. A good bit of the time
4. Some of the time
5. A little of the time
6. None of the time

Happy
Taking all things together, how would you say you are these days - would you say you’re very happy, fairly happy, or not too happy these days?
1. Very happy
2. Fairly happy
3. Not too happy

CONHOMD
SHOWCARD C
To what extent do you agree with the following statement. Over the next 3-5 years I expect to have many more positive than negative experiences.
1. Strongly disagree
2. Moderately disagree
3. Slightly disagree
### 3. Activities of Daily Living (ADL)

**ASK ALL**

#### AcDif1

**SHOWCARD D**

This next section is about practical activities.

Looking at showcard D, do you/(name of proxy respondent) have any difficulty with any of the following activities...

### personal care such as dressing, bathing, washing, or using the toilet?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif2

And do you/(name of proxy respondent) have any difficulty with...

### getting out and about or using transport?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif3

And do you/(name of proxy respondent) have any difficulty with...

### medical care such as taking medicines or pills, having injections or changes of dressing?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif4

And do you/(name of proxy respondent) have any difficulty with...

### household activities like preparing meals, shopping, laundry and housework?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif5

And do you/(name of proxy respondent) have any difficulty with...

### practical activities such as gardening, decorating, or doing household repairs?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif6

And do you/(name of proxy respondent) have any difficulty with...

### dealing with paperwork, such as writing letters, sending cards or filling forms?

1. No, no difficulty at all
2. Yes, some difficulty
3. Yes, a lot of difficulty

#### AcDif7

And do you/(name of proxy respondent) have any difficulty with...

### managing money, such as budgeting for food or paying bills?

1. No, no difficulty at all
2. Yes, some difficulty

SECTION H - DEPRESSIVE IDEAS
ASK IF SELECTED RESPONDENT AND DVG11>=1

H1
I would now like to ask you about when you have been feeling miserable, depressed or unable to take an interest in things / sad, miserable or depressed / unable to enjoy or take an interest in / things.
In the past week, was this worse in the morning or in the evening, or did this make no difference?
PROMPT AS NECESSARY
1 in the morning
2 in the evening
3 no difference/other

H2
INTERVIEWER PLEASE READ OUT:
Many people find that feeling miserable, depressed or unable to take an interest in things can affect their interest in sex.
Over the past month, do you think your interest in sex has...
RUNNING PROMPT
1 increased
2 decreased
3 has it stayed the same?
4 Spontaneous - Not applicable

H3A
When you have felt miserable, depressed or unable to take an interest in things in the past seven days
1 have you been so restless that you couldn't sit still?
2 No

H3B
1 have you been doing things more slowly, for example, walking more slowly?
2 No

H3C
1 have you been less talkative than normal?
2 No

H4
Now, thinking about the past seven days have you on at least one occasion felt guilty or blamed yourself when things went wrong when it hasn't been your fault?
1 Yes, at least once
2 No

H5
During the past week, have you been feeling you are not as good as other people?
1 Yes
2 No

H6
Have you felt hopeless at all during the past seven days, for instance about your future?
1 Yes
2 No

H10
Thank you for answering those questions on how you have been feeling. I would now like to ask you a few questions about worrying.
1 Continue
SECTION I - WORRY

ASK IF SELECTED RESPONDENT

I1
(The next few questions are about worrying.) In the past month, did you find yourself worrying more than you needed to about things?
1 Yes, worrying
2 No/concerned

IF I1 = No/concerned THEN

I2
Have you had any worries at all in the past month?
1 Yes
2 No

IF (I1 = Yes) OR (I2 = Yes) THEN

I3
INTRO
For the next few questions, I want you to think about worries you have had other than those about your physical health.
1 Continue

IF (I1 = Yes) OR (I2 = Yes) THEN

I6
On how many of the past seven days have you been worrying about things (other than your physical health)?
1 4 days or more
2 1 to 3 days
3 None

IF (I1 = Yes) OR (I2 = Yes) AND (I6 = 4 days or more) OR (I6 = 1 to 3 days) THEN

I7
In your opinion, have you been worrying too much in view of your circumstances?
REFER TO WORRIES OTHER THAN THOSE ABOUT PHYSICAL HEALTH
1 Yes
2 No

IF (I1 = Yes) OR (I2 = Yes) AND (I6 = 4 days or more) OR (I6 = 1 to 3 days) THEN

I8
In the past week, has this worrying been:
REFER TO WORRIES OTHER THAN THOSE ABOUT PHYSICAL HEALTH
RUNNING PROMPT
1 very unpleasant
2 a little unpleasant
3 or not unpleasant?

IF (I1 = Yes) OR (I2 = Yes) AND (I6 = 4 days or more) OR (I6 = 1 to 3 days) THEN

I9
Have you worried for more than 3 hours in total on any one of the past seven days?
REFER TO WORRIES OTHER THAN THOSE ABOUT PHYSICAL HEALTH
1 Yes
2 No
SECTION J - ANXIETY
ASK IF SELECTED RESPONDENT

J1 Have you been feeling anxious or nervous in the past month?
1 Yes, anxious or nervous
2 No

IF J1 = No THEN
J2 In the past month, did you ever find your muscles felt tense or that you couldn't relax?
1 Yes
2 No

J3 Some people have phobias; they get nervous or uncomfortable about specific things or situations when there is no real danger. For instance they may get extremely anxious when in confined spaces, or they may have a fear of heights. Others become nervous at the sight of things like blood or spiders.

In the past month have you felt anxious, nervous or tense about any specific things when there was no real danger?
1 Yes
2 No

IF DVJ4 = anxiety and phobia THEN
J4 In the past month, when you felt anxious/nervous/tense, was this always brought on by the phobia about some specific situation or thing or did you sometimes feel generally anxious/nervous/tense?
1 Always brought on by phobia
2 Sometimes generally anxious

IF DVJ4 = anxiety and phobia AND J5 = Sometimes generally anxious THEN
J6 The next questions are concerned with general anxiety/nervousness/tension only. I will ask you about the anxiety which is brought on by the phobia about specific things or situations later.

On how many of the past seven days have you felt generally anxious/nervous/tense?
1 4 days or more
2 1 to 3 days
3 None

IF DVJ4 = only general anxiety THEN
J7 On how many of the past seven days have you felt generally anxious/nervous/tense?
1 4 days or more
2 1 to 3 days
3 None

IF ((J6 = 4 days or more) OR (J6 = 1 to 3 days)) OR ((J7 = 4 days or more) OR (J7 = 1 to 3 days)) THEN
J8 In the past week, has your anxiety/nervousness/tension been:
RUNNING PROMPT
1 very unpleasant
2 a little unpleasant
3 not unpleasant?

IF ((J6 = 4 days or more) OR (J6 = 1 to 3 days)) OR ((J7 = 4 days or more) OR (J7 = 1 to 3 days)) THEN
J9 SHOW CARD Y
In the past week, when you've been anxious/nervous/tense, have you had any of the symptoms shown on this card?
1 Yes
2 No

IF ((J6 = 4 days or more) OR (J6 = 1 to 3 days)) OR ((J7 = 4 days or more) OR (J7 = 1 to 3 days)) AND J9 = Yes THEN
J9A SHOW CARD Y
Which of these symptoms did you have when you felt anxious/nervous/tense?
CODE ALL THAT APPLY
1 Heart racing or pounding
2 Hands sweating or shaking
3 Feeling dizzy
4 Difficulty getting your breath
5 Butterflies in stomach
6 Dry mouth
7 Nausea or feeling as though you wanted to vomit

IF ((J6 = 4 days or more) OR (J6 = 1 to 3 days)) OR ((J7 = 4 days or more) OR (J7 = 1 to 3 days)) THEN
J10 Have you felt anxious/nervous/tense for more than 3 hours in total on any one of the past seven days?
1 Yes
2 No

IF ((J6 = 4 days or more) OR (J6 = 1 to 3 days)) OR ((J7 = 4 days or more) OR (J7 = 1 to 3 days)) THEN
J11 How long have you had these feelings of general anxiety/nervousness/tension as you described?
SHOW CARD Z
1 Less than 2 weeks
2 2 weeks but less than 6 months
3 6 months but less than 1 year
4 1 year but less than 2 years
5 2 years or more
SECTION K - PHOBIAS

ASK IF SELECTED RESPONDENT AND DVK1 = Others

K2
Sometimes people avoid a specific situation or thing because they have a phobia about it.
In the past month, have you avoided any situation or thing because it would have made you feel
nervous or anxious, even though there was no real danger?
1  Yes
2  No

IF (DVK1 = Others) OR (K2 = Yes) THEN

ASK IF SELECTED RESPONDENT AND COMPLETING SELF COMPLETION

Intro
The next set of questions are about the kind of person you generally are, that is, how you have usually felt or behaved over the past several years. (Remember not to think too hard about the answers, the first answer you think of is fine.)
PRESS 1 FOR YES, PRESS 2 FOR NO OR 9 IF YOU DO NOT UNDERSTAND THE QUESTION OR IT DOES NOT APPLY.

PD73 Have you often become frantic when you thought that someone you really cared about was going to leave you?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD74 Do your relationships with people you really care about have lots of extreme ups and downs?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD75 Have you all of a sudden changed your sense of who you are and where you are headed?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD76 Does your sense of who you are often change dramatically?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD77 Are you different with different people or in different situations so that you sometimes don’t know who you really are?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD78 Have there been lots of sudden changes in your goals, career plans, religious beliefs, and so on?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD79 Have you often done things impulsively?
PD80
Have you tried to hurt or kill yourself or threatened to do so?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD81
Have you ever cut, burned, or scratched yourself on purpose?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD82
Do you have a lot of sudden mood changes?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD83
Do you often feel empty inside?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD84
Do you often have temper outbursts or get so angry that you lose control?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD85
Do you hit people or throw things when you get angry?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD86
Do even little things get you very angry?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD87
When you are under a lot of stress, do you get suspicious of other people or feel especially ‘spaced out’ as if you were on drugs?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD88
Before you were 15, would you bully or threaten other kids?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

PD89
Before you were 15, would you start fights?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

Have you ever hit or thrown things at your spouse or partner?
1  Yes
2  No
9  Don't Understand/Does Not Apply

PD106
Since you were 15, have you ever hit a child, yours or someone else's, so hard that he or she had bruises, or had to stay in bed or see a doctor?
1  Yes
2  No
9  Don't Understand/Does Not Apply

PD107
Since you were 15, have you been in any fights?
1  Yes
2  No
9  Don't Understand/Does Not Apply

PD107a
Have you been in a physical fight, assaulted or deliberately hit anyone in the past five years?
1  Yes
2  No
9  Don't Understand/Does Not Apply

IF PD107a = Yes THEN
PD107b
How many times in the last five years?
Range: 1…100

IF PD107a = Yes THEN
PD107c
Were you ever intoxicated with drink or drugs before any of these incidents?
1  Yes
2  No
9  Don't Understand/Does Not Apply

IF PD107a = Yes THEN
PD107d
Did any of these incidents involve any of the following people?
PLEASE ENTER THE NUMBERS OF ALL THOSE PEOPLE INVOLVED
1  Spouse or partner
2  Girlfriend or boyfriend
3  Children
4  Other family member
5  Friend
85

APENDIX D: APMS 2007 phase one questionnaire documentation and phase two contents

6 Someone known to you - not a family or friend
7 A stranger
8 Police
9 Other

IF PD107a = Yes THEN
PD107e
Did any of these fights or assaults occur in the following places?
PLEASE ENTER THE NUMBERS OF ALL THE PLACES WHERE THESE FIGHTS OR ASSAULTS OCCURRED.
1 In your home
2 In someone else's home
3 In the street - outdoors
4 In a bar or pub
5 At your workplace
6 In a hospital
7 Anywhere else

IF PD107a = Yes THEN
PD107f
Did any of the following things happen as a result of these fights or assaults?
PLEASE ENTER THE NUMBERS OF ALL THE THINGS THAT RESULTED FROM THESE FIGHTS OR ASSAULTS.
1 You were injured
2 You saw your GP because of your injuries
3 You went to hospital because of your injuries
4 The other person(s) was injured
5 The police became involved
6 None of these things

PD108
Since you were 15, have you used a weapon, like a stick, knife, or gun in a fight?
1 Yes
2 No
9 Don't Understand/Does Not Apply

PD109
Do you feel guilty or remorseful for previous behaviour such as having hurt, mistreated, or stolen from other people?
1 Yes
2 No
9 Don't Understand/Does Not Apply

PD110
Since you were 15 have you done things that are against the law - even if you weren't caught? For example, have you stolen things?
1 Yes
2 No
9 Don't Understand/Does Not Apply

PD111
Since you were 15, have you used or sold drugs?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

18. Social Functioning Questionnaire - (SFQ)

ASK IF SELECTED RESPONDENT AND COMPLETING SELF COMPLETION

Intro
For the next few statements, please choose the response that comes closest to how you have been over the past two weeks:

1. Continue

SFQA
I complete my tasks at work and home satisfactorily.
1. Most of the time
2. Usually
3. Occasionally
4. Not at all

SFQB
I find my tasks at work and at home very stressful.
1. Most of the time
2. Usually
3. Occasionally
4. Not at all

SFQC
I have no money problems
1. No problems at all
2. Slight problems only
3. Definite problems
4. Very severe problems

SFQD
I have difficulties in getting and keeping close relationships.
1. Severe difficulties
2. Some difficulties
3. Occasional difficulties
4. No difficulties at all

SFQE
I have problems in my sex life.
1. Severe problems
2. Moderate problems
3. Occasional problems
4. No problems at all

SFQF
I get on well with my family and other relatives.
1. Yes, always
2. Yes, usually
3. No, some problems
4. No, severe problems

SFQG
I feel lonely and isolated from other people.
19. **Asperger syndrome - (Asperger Self Completion Questionnaire)**

**ASK IF SELECTED RESPONDENT AND COMPLETING SELF COMPLETION**

**Intro**
The following statements are about the kind of person that you are, and the way you prefer to do things. You might find some of the statements a bit odd, but please answer all of them to the best of your ability, even if some of them don't seem to apply to you.

1. Continue

**ASover**
I prefer to do things the same way over and over again.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree

**ASsound**
I often notice small sounds when others do not.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree

**ASpolite**
Other people frequently tell me that what I've said is impolite, even though I think it is polite.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree

**ASdates**
I am fascinated by dates.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree

**ASsocial**
I find social situations easy.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree

**ASdetail**
I tend to notice the details that others do not.
1. Definitely agree
2. Slightly agree
3. Slightly disagree
4. Definitely disagree
3 Slightly disagree
4 Definitely disagree

A$Phone
When I talk on the phone, I'm not sure when it's my turn to speak.
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

A$Face
I find it easy to work out what someone is thinking or feeling just by looking at their face.
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

A$Inform
I like to collect information about categories of things (e.g. types of car, types of bird, types of train, types of plant, etc).
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

A$Plan
I like to plan any activities I participate in carefully.
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

A$Social
I enjoy social occasions.
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

A$Date
I am not very good at remembering people's date of birth.
1 Definitely agree
2 Slightly agree
3 Slightly disagree
4 Definitely disagree

IF DVAssc >=2 AND DVTotal >=8 THEN
ImpactAS
You've said that you prefer to do things the same way each time (plan activities carefully).
Are your important daily routines, work or study ever affected by this?
1 To a great extent
2 To some extent
3 A little bit
4 Not at all
20. Gambling

ASK IF SELECTED RESPONDENT AND COMPLETING SELF COMPLETION

Gamb1
The next few questions are about gambling. By 'gambling' we mean things like:
- buying lottery tickets or scratchcards for yourself;
- playing games or making bets for money on the internet (online gambling);
- playing football pools, bingo or fruit machines;
- playing games or making bets with friends for money;
- betting on races and/or with a bookmaker;
- and table games in a casino.

Have you spent any money on any of these things in the last 12 months?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

IF Gamb1 = No THEN
Gamb2
Just to check, does that mean that you haven’t gambled at all in the last 12 months, or do you gamble very occasionally, perhaps to buy a lottery ticket, scratch card, or play on a fruit machine?
1 Very occasionally in last year
2 Not at all in the last year

IF (Gamb1 = Yes) OR (Gamb2 = Yes) THEN
GamDesir
Do you need to gamble with increasing amounts of money in order to achieve the desired excitement?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

IF (Gamb1 = Yes) OR (Gamb2 = Yes) THEN
GamStop
Have you made repeated unsuccessful efforts to control, cut back, or stop gambling?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

IF GambStop = Yes THEN
GamIrrit
Are you restless or irritable when attempting to cut down or stop gambling?
1 Yes
2 No
9 Don’t Understand/Does Not Apply

21. Post Traumatic Stress Disorder (PTSD) – TSQ and working in Armed Forces

ASK IF SELECTED RESPONDENT AND COMPLETING SELF COMPLETION

PTSD

The next questions are about traumatic events or experiences that might have happened to you at any time in your life.

The term traumatic event or experience means something like a major natural disaster, a serious automobile accident, being raped, seeing someone killed or seriously injured, having a loved one die by murder or suicide, or any other experience that either put you or someone close to you at risk of serious harm or death.

Has a traumatic event or experience ever happened to you at any time in your life?
1. Yes
2. No
3. Don’t Understand/Does Not Apply

IF PTSD = Yes THEN

How long ago did that traumatic experience happen? If you have experienced more than one, please answer about the most recent
1. Within the last 6 months
2. More than 6 months ago, but since the age of 16
3. More than 6 months ago, before the age of 16

IF (PTSD = Yes) AND (PTSDlong = Within the last 6 months OR More than 6 months ago, but since the age 16) THEN

Consider

Please consider the following reactions that sometimes occur after a traumatic experience.

Indicate whether or not you have experienced the following at least twice in the past week.
1. Continue

IF (PTSD = Yes) AND (PTSDlong = Within the last 6 months OR More than 6 months ago, but since the age of 16) THEN

PTSD

Have you experienced, at least twice in the past week:

1. Upsetting memories or thoughts about the event that have come into your mind against your will
2. Acting or feeling as though the event were happening again

IF (PTSD = Yes) AND (PTSDlong = Within the last 6 months OR More than 6 months ago, but since the age of 16) THEN

PTSD

Have you experienced, at least twice in the past week:

1. Upsetting dreams about the event
2. Difficulty concentrating

IF (PTSD = Yes) AND (PTSDlong = Within the last 6 months OR More than 6 months ago, but since the age of 16) THEN

PTSD

Have you experienced, at least twice in the past week:

1. Bodily reactions (such as fast heartbeat, stomach churning, sweatiness, dizziness) when reminded of the event
2. Feeling upset by reminders of the event
3. Difficulty falling or staying asleep
4. Irritability or outbursts of anger
5. Difficulty falling or staying asleep

**END OF SELF COMPLETION**
When I am done, tell me as many words as you can, in any order. Ready?

Read list at a steady rhythm of about 1 word per second. Cabin -- pipe -- elephant -- chest -- silk -- theatre -- watch -- whip -- pillow -- giant.

Now tell me all the words you can remember. Code all recalled correctly. If no words recalled correctly press enter.

0 None remembered
1 Cabin
2 Pipe
3 Elephant
4 Chest
5 Silk
6 Theatre
7 Watch
8 Whip
9 Pillow
10 Giant

Subtract 1
Please take 7 away from 100 and then tell me the answer.
Range: 1…100

Subtract 2
Now continue to take 7 away from what you have left over until I ask you to stop.
Allow four more subtractions.
- Write in second subtraction.
  Range: 1…100

Subtract 3
Write in third subtraction.
Range: 1…100

Subtract 4
Write in fourth subtraction.
Range: 1…100

Subtract 5
Write in fifth subtraction, then tell respondent to stop.
Range: 1…100

Paper
What do people usually use to cut paper?
1 Scissors or shears
2 Anything else

Count
Please count backwards from 20 to 1.
1 Counted correctly
2 Made one or more mistakes
Now, I would like you to look at this card. Begin with the first word on the top row and go from left to right along the row, and then on to the second row. Please pause after each word - wait until I say OK before going on to the next. Don't worry if you don't recognize a word. Have a guess at how it is said. We will stop before the end of the list.

ALLOW ONLY PRECISE PRONUNCIATIONS. MARK ALL ERRORS OR DON'T KNOWS IN CORRECT.

Now, I am going to give you a category and I want you to name, as fast as you can, all of the things that belong in that category. For example, if I say 'articles of clothing' you could say shirt, tie or hat.

Can you think of any other articles of clothing?

1. Respondent can name an article of clothing
2. Respondent does not understand/cannot name an article of clothing

That's fine. I want you to name all of the things that belong to another category. That is animals. Any type of animal is okay: farm animals, birds, fish, insects, any kind of animal will do. You will have one minute.

1. Continue
2. Respondent does not understand/cannot name an animal

Okay, ready, go!

5. Stop
27. Stressful life events

ASK IF SELECTED RESPONDENT

Intro
Next, I would like to ask you about things that may have happened to you or problems you may have faced during your life.

1. Continue

Trauma1
SHOW CARD BH
Looking at the card, could you tell me if you have ever experienced any of the problems or events shown on the card, at any time in your life:

CODE ALL THAT APPLY

IF NONE - CODE 7
1. Serious illness, injury or assault to yourself
2. Serious illness, injury or assault to a close relative
3. Death of an immediate family member of yours
4. Death of a close family friend or other relative, like an Aunt, cousin or grandparent
5. Separation due to marital difficulties, divorce or steady relationship broken down
6. Serious problem with a close friend, neighbour or relative
7. None of these

IF Trauma1 = NOT None of these THEN
TR1WHn
SHOW CARD BJ
Thinking about the (name of traumatic event), when did that happen?

INTERVIEWER: IF SEVERAL EVENTS OF THE SAME TYPE, ASK ABOUT THE MOST RECENT ONE

1. Within last 6 months
2. More than 6 months ago, but since the age of 16
3. More than 6 months ago, and before the age of 16

Trauma3
SHOW CARD BM
Now looking at this card, could you tell me if you have ever experienced any of these problems or events, at any time in your life:

CODE ALL THAT APPLY

IF NONE - CODE 8
1. Bullying
2. Violence at work
3. Violence in the home
4. Sexual abuse
5. Being expelled from school
6. Running away from your home
7. Being homeless
8. None of these

IF Trauma3 = NOT None of these THEN
TR2WHn
SHOW CARD BL
Thinking about the (name of traumatic event), when did that happen?

INTERVIEWER: IF SEVERAL EVENTS OF THE SAME TYPE, ASK ABOUT THE MOST RECENT ONE

1. Within last 6 months
2. More than 6 months ago, but since the age of 16
3. More than 6 months ago, and before the age of 16
28. Parenting

ASK IF SELECTED RESPONDENT

Childrst
Up to the age of 16 did you spend any time in any kind of institution such as a children’s home, borstal, or young offenders unit? (EXCLUDE PRIVATE EDUCATION BOARDING SCHOOL)

1 Yes
2 No

LACare
(May I just check) Were you ever taken into Local Authority Care (that is into a children’s home or foster care) as a child up to the age of 16?

1 Yes
2 No
3 Does not apply, e.g. foreign national

MaPaIntro
Now a few questions about you and your parents when you were growing up.

1 Continue

BothMaPa
Did you live more or less continuously with both of your natural parents at home until you were 16?

INTERVIEWER: EXPLAIN IF NECESSARY: That is your birth parents.

‘YES’ TO INCLUDE BOTH PARENTS BUT RESPONDENT AT BOARDING SCHOOL OR AWAY TEMPORARILY.

1 Yes
2 No

IF BothMaPa = No THEN

YNoBoth
Is that because there was ...READ OUT...

1 ... a divorce or separation,
2 or, a death,
3 or, you were adopted,
4 or, your parents never lived together,
5 or, is there another reason? (IF VOLUNTEERED, SPECIFY AT NEXT QUESTION)

IF BothMaPa = No AND YNoBoth = Other reason THEN

XYNoBoth
IF VOLUNTEERED, TYPE IN OTHER ANSWER GIVEN, OTHERWISE TYPE 7 AND <Enter>

IF BothMaPa = No THEN

MaOrPa
And may I check, [...] after that did you live more or less continuously with your mother or with your father until you were 16?

1 Mother
2 Father
3 Both Mother and Father equally
4 Other relative
5 Other (in care, fostered, etc)
29. Social support

ASK IF SELECTED RESPONDENT

DLSSln1
The next few questions are about people you feel close to, including relatives, friends and acquaintances.

1  Continue

CloseRel
First of all, I would like to ask you about the people that you live with.

How many adults who live with you do you feel close to?

INTERVIEWER: IF NONE ENTER '0'
Range: 0…97

CloseR3
Now I would like to ask about people you feel close to who do not live with you.

How many relatives aged 16 or over, who do not live with you, do you feel close to?

INTERVIEWER: IF NONE ENTER '0'
Range: 0…97

CloseFr
How many friends or acquaintances who do not live with you would you describe as close or good friends?

INTERVIEWER: IF NONE ENTER '0'
Range: 0…97

IF (CloseR3 >= 1) OR (CloseFr >= 1) THEN

OutSee
Thinking about all of the people who do not live with you and whom you feel close to or regard as good friends, how many did you communicate with in the past week?

INTERVIEWER: IF NONE ENTER '0'
Range: 0…97

DLSSln2
I would now like you to think about your family and friends. (By family I mean those who live with you as well as those elsewhere).

Here are some comments people have made about their family and their friends. For each statement, please say whether it is not true, partly true or certainly true for you.

1  Continue

DLSS1
SHOW CARD BP
There are people I know amongst my family and friends - who do things to make me happy.

1  Not true
2  Partly true
3  Certainly true

DLSS2
SHOW CARD BP
(There are people I know amongst my family and friends) - who make me feel loved.

1  Not true
2  Partly true
3  Certainly true

DLSS3
SHOW CARD BP
(There are people I know amongst my family and friends) - who can be relied on no matter what happens.

1  Not true
2  Partly true
3  Certainly true

DLSS4
SHOW CARD BP
(There are people I know amongst my family and friends) - who would see that I am taken care of if I needed to be.

1  Not true
2  Partly true
3  Certainly true

DLSS5
SHOW CARD BP
(There are people I know amongst my family and friends) - who accept me just as I am.

1  Not true
2  Partly true
3  Certainly true

DLSS6

3  Certainly true

DLSS7
SHOW CARD BP
(There are people I know amongst my family and friends) - who give me support and encouragement.

1  Not true
2  Partly true
3  Certainly true
30. Religion and spirituality

ASK IF SELECTED RESPONDENT

SpecRel
The next few questions are about religion. Do you have a specific religion?
1 Yes
2 No

IF SpecRel = Yes THEN

WhatRel
Which religion is that?
INTERVIEWER: CODE ONE ONLY. IF MORE THAN ONE CODE THE MAIN RELIGION.
1 Roman Catholic
2 Protestant Christian
3 Other Christian
4 Islam
5 Hinduism (Jain, Sikh)
6 Judaism
7 Buddhism
8 Other (SPECIFY)

IF SpecRel = Yes AND WhatRel = Other THEN

OthRel
INTERVIEWER: ENTER RELIGION

Relig
By ‘religion’, we mean the actual practice of a faith, e.g. going to a temple, mosque, church or synagogue. Some people do not follow a religion but do have spiritual beliefs or experiences. Some people make sense of their lives without any religious or spiritual beliefs. Would you say that you have a religious or a spiritual understanding of your life?
CODE ALL THAT APPLY
1 Religious
2 Spiritual
3 Neither

IF Relig = Religious OR Relig = Spiritual THEN

RStrong
SHOW CARD BQ
How strongly do you hold to your religious/spiritual view of life? Please look at this card and tell me the number that best describes your view, from 0 ‘weakly held’ through to 10 ‘strongly held’.
INTERVIEWER: ENTER NUMBER BETWEEN 0 AND 10.
Range: 0…10

IF Relig = Religious OR Relig = Spiritual THEN

ImpPrac
SHOW CARD BR
How important to you is the practice of your belief (e.g. private meditation, religious services) in your day-to-day life? Please look at this card and tell me the number that best describes your view, from 0 ‘not necessary’ through to 10 ‘essential’.
INTERVIEWER: ENTER NUMBER BETWEEN 0 AND 10.
Range: 0…10
31. Social capital and participation

ASK IF SELECTED RESPONDENT

LiveIntro
The next few questions are about the area where you live.
  1  Continue.

Hwlong
How long have you lived in this area?
  1  Less than one year
  2  1-5 years
  3  6-9 years
  4  10 years or more

IntroAgree
How much do you agree or disagree with the following statements about your area?
By 'around here' we mean anywhere you can walk to, from your home, in 5 minutes.
  1  Continue.

Belong
SHOWCARD BT
Please look at this card and tell me the answer that best describes your feelings.
I feel like I belong around here.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree

  5  Strongly disagree

Trust
SHOWCARD BT
I trust people around here.
  1  Strongly agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Enjoy
SHOWCARD BT
I enjoy living around here.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Realhme
SHOWCARD BT
I think of the area around here as a real home not just a place.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree

Safe
SHOWCARD BT
I feel safe around here in the daytime.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Move
SHOWCARD BT
Given the opportunity I would like to move away from here.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Resident
SHOWCARD BT
The area around here is nicely kept by its residents.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Litter
SHOWCARD BT
Litter is a problem around here.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

Graffit
SHOWCARD BT
Graffiti or vandalism is a problem around here.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
  4  Somewhat disagree
  5  Strongly disagree

PropClos
SHOWCARD BT
The properties around here are too close together.
  1  Strongly Agree
  2  Somewhat agree
  3  Neither agree nor disagree
130}

Green

Showcard BT
There are not enough green areas or trees around here.
1  Strongly agree
2  Somewhat agree
3  Neither agree nor disagree
4  Somewhat disagree
5  Strongly disagree

IntroActv
The next few questions are about things that you do in your local area.
1  Continue.

ComGrp
How often do you participate in a voluntary or local community group?

Thank you letter
Dear Resident,

We would be grateful for your help with the National Study of Health and Wellbeing.

I am writing to tell you about a study that NatCen is carrying out for the National Health Service. The main aim of the study is to see how the stresses and strains of everyday life can affect people’s health and wellbeing. This will help services and support to be planned more effectively.

Within the next few weeks, one of our interviewers will call at your door to explain the survey in more detail and to ask for your help. If you are busy when the interviewer calls s/he will be happy to call back.

In our work we rely on people’s voluntary co-operation. Your help will give everyone a better understanding of the experiences and needs of people in our society. The success of the study depends on the participation of as many of those selected as possible. As a token of our appreciation all participants receive a £5 high street voucher. If you would like to know more about the study in advance of an interviewer calling, please call 0800 652 4572, or write to me at the above address.

Yours sincerely,

[Signature]

Joanne Phillipson
Project Controller

How was your address selected?
Your address is one of about 15,000 addresses throughout the country that we have selected at random from the Post Office’s list of addresses.

Who do we want to interview?
One person aged 16 or over, selected at random at each address.

Who are our interviewers?
All our interviewers carry an official identification card which includes their photograph and the NatCen logo that appears on the top of this letter.

Confidentiality
Everything you tell us will be treated in strictest confidence. We are fully compliant with data protection regulations.

For further information and a summary of findings from previous reports see: www.healthandwellbeingsurvey.org
How is the information used?

- The study will be used by the NHS to look at how the stresses and strains of everyday life affect people’s health and wellbeing.
- The NHS uses this information to help plan health services and to identify key priorities for public health.
- The results of this study can help in the development of policies and to make sure that services, help and support are available for people who need them.
- By comparing results with earlier studies it is also possible to see where progress has been made and where improvements are still needed.

Who can I contact about the study?

We hope that you have found this leaflet interesting, and that it shows the importance of the study.

If you would like to talk to someone about this study, please telephone NatCen on freephone 0800 652 4572 and ask for Joanne Phillips (Project Controller) or Bryan Mason (Deputy Project Controller).

Who is carrying out the study?

The National Study of Health and Wellbeing is carried out in collaboration with the University of Leicester (School of Medicine) and the National Centre for Social Research (Research, who are carrying out the interviews on behalf of the NHS Information Centre).

Why is the study important?

Findings from previous surveys are published in a series of special reports and are available on the following websites:

- www.natcen.ac.uk
- www.healthandwellbeingsurvey.org
- www.ic.nhs.uk

More women than men reported having anxiety, depression and a phobia. 

About a quarter of adults with an emotional problem were receiving treatment of some kind.

Irritability among women was found to gradually decline with age.

Did you know…?

(Sleep problems, fatigue, irritability and worry were most commonly reported by men and women.

1 in 10 elderly people reported symptoms of worry.

More women than men reported having a phobia.

Where can I get further information about this study?

Further information about the National Study of Health and Wellbeing 2006/7 can be found on the survey website:

www.healthandwellbeingsurvey.org

Information about the National Centre for Social Research, who are carrying out the interviews on this study, can be found at:

www.natcen.ac.uk

Where can I get further information about earlier studies?

Findings from the previous surveys are published in a series of special reports and are available on the following websites:

Department of Health
www.dh.gov.uk

NHS Information Centre for Health & Social Care
www.ic.nhs.uk

What is the study about?

The National Study of Health and Wellbeing 2006/7 is part of an important program on the health and wellbeing of the nation.

The study is designed to look at:

- How the stresses and strains of everyday life affect people’s health.
- What people do for help or support when they need it.
- Changes in health over time. The results of this study can be compared with similar studies carried out in 1993 and 2000.

Who takes part in the survey?

- We would like to interview around 8,500 adults aged 16 and over across England. Addresses are selected at random from a file the Post Office use to deliver mail and we then seek to interview all adults at each address.
- We interview a large number of people to make sure that we get a good mix of people and all groups of people are represented in the study e.g. men and women of all ages.

What does the study involve?

An experienced NatCen interviewer will interview everyone who agrees to take part in the study. The interviewer will call at your home and carry out an interview using a laptop computer. The interview can be carried out at a time that suits you. Questions are about health and wellbeing and use of health services like the GP, nurse and hospital.

Is the study confidential?

Yes. Any information given to us will be treated in strictest confidence. The results will not be used in any way in which they can be associated with you.

Reports from the study show information about groups of people (e.g. men and women, adults aged 16-24) not individuals.

11. Any other Asian/Asian British background
12. Black or Black British – Caribbean
13. Black or Black British – African
14. Any other Black/Black British background
15. Chinese
16. Other

### CARD BW

1. Degree (or degree level qualification) or NVQ Level 5
2. Higher educational qualification below degree level or NVQ Level 4
3. A levels or highers or ONC/OND/BEC/TEC or NVQ Level 3 or BTEC National or GNVC (Advance Level)
4. O level/GCSE grade A-C or CSE grade 1 or Standard Grade level 1-3 or NVQ Level 2 or BTEC First or GNVQ (Intermediate level)
5. CSE grades 2-5 or GCSE grade D-G or Standard Grade level 4-6 or NVQ Level 1 or GNVQ (Foundation Level)
6. CSE Ungraded
7. Other qualifications (specify)
8. No formal qualifications
CARD BX

1. Child Benefit
2. One Parent Benefit
3. Guardian’s Allowance
4. Invalid Care Allowance
5. Retirement pension (National Insurance) or old person’s pension
6. Widow’s pension or allowance (National Insurance)
7. War disablement pension
8. Severe disablement allowance (and related allowances)
9. Disability working allowance
10. None of these

CARD BY

1. Care component of Disability Living Allowance
2. Mobility component of Disability Living Allowance
3. Attendance Allowance
4. Disability Living Allowance – unsure if Care and/or Mobility components
5. None of these
CARD BZ

1. Jobseekers Allowance
2. Income support
3. Working tax credit/ Child tax credit (not received in a lump sum)
4. Incapacity Benefit
5. Statutory sick pay
6. Industrial injury disablement benefit
7. None of these

INC

CARD CA

1. Maternity Allowance
2. Statutory Maternity Pay from your employer or former employer
3. Neither of these
CARD CB

1. Working tax credit/ Child tax credit (paid in a lump sum)
2. A grant from the Social Fund for funeral expenses
3. A grant from the Social Fund for maternity expenses
4. A Community Care grant from the Social Fund
5. Back to work bonus
6. Widows payment (lump sum)
7. Any National Insurance or State benefit not mentioned earlier
8. None of these

CARD CC

1. Earnings from employment or self-employment
2. Pension from former employer
3. Interest from savings, shared etc.
4. Other kinds of regular allowance from outside the household
5. Other sources e.g. rent
6. None of these

The NHS Central Register lists all the people in the country and their National Health Service (NHS) number.

We would like to ask for your consent for us to send your name, address and date of birth to the National Health Service Central Register. A marker will be put against your name to show that you took part in the National Study of Health and Wellbeing.

If a person who took part in the National Study of Health and Wellbeing dies, the cause of death will be linked with their answers to the survey. By linking this information the research is more useful as we can look at how people's lifestyle can have an impact on their future health.

This information will be confidential and used for research purposes only.

By signing this form you are only giving permission for the linking of this information to routine administrative data and nothing else. We will not be able to obtain any other details from your medical records.

You can cancel this permission at any time in the future by writing to us at the following address: Joanne Phillipson, Operations Department, 101-135 Kings Road, Brentwood, Essex CM14 4LX.

Your consent

I, (name) ________________________________, consent to the National Centre for Social Research passing my name, address and date of birth to the National Health Service Central Register. I understand that information held by the NHS Central Register may be used to keep in touch with me and follow up my health status.

Signed ____________________________ Date ___________________

I understand that these details will be used for research purposes only.
The National Study of Health and Wellbeing

Useful Contacts

There may be times in everyone’s life when they feel miserable and depressed. At such times they might feel that they cannot cope. When people feel like this it is important that they talk to someone and seek help.

If you should feel like this, or if you are concerned for someone else, here are some contacts which might be useful.

For local help:

• A GP (General Practitioner). A person’s GP will be able to provide help and advice and can provide access to appropriate specialist service and local organisations.

• There will also be many local organisations providing a range of services including support groups, help lines and information. Details can be obtained from your GP, your local library, or they may be listed in the telephone directory.

The national organisations listed below may also be able to put you in touch with local groups:

• The Samaritans
  The Samaritans provide a confidential service for people in despair and who feel suicidal. 24 hour emergency line: 0845 90 90 90 www.samaritans.org.uk

• MIND (National Association for Mental Health)
  Offers confidential help on a range of mental health issues. 0845 7660163 Mon-Fri 9.15am – 5.15pm www.mind.org.uk

• Supportline
  Confidential telephone helpline offering emotional support to any individual on any issue including child abuse, bullying, eating disorders, domestic violence, rape, mental health, depression, anxiety and addictions. 020 8554 9004 www.supportline.org.uk

• SANE
  Provides information and support to people who suffer from all forms of mental illness and their friends and families. 0845 7678000 www.sane.org.uk

• NHS Direct
  Provides help and advice from a qualified nurse on a wide range of health problems and issues. 0845 4547 www.nhsdirect.nhs.uk

• Alzheimer’s Disease Society
  Provides support for people with dementia and for the people who care for them. 020 7308 0606 www.alzheimers.org.uk

• National Domestic Violence Helpline
  Provides access to 24-hour emergency refuge accommodation as well as an information service. 0808 2000 247

• Cruse Bereavement Care
  Offers help, including a free counselling service, for bereaved people whatever their age, nationality or beliefs. 0870 1671677 www.crusebereavementcare.org.uk

• National Gay and Lesbian Switchboard
  Helpline and information service for lesbians, gay men and bisexual people. 0207 837 7324 (24 hours) www.lgs.org.uk

• Citizens Advice Bureau
  Helps people resolve their legal money & other problems providing them with free information and advice. For local offices see the listings in your local phonebook. www.adviceguide.org.uk

• Alcoholics Anonymous
  A fellowship of men and women who share their experience, strength and hope with each other that they may solve their common problem and help others recover from alcoholism. 0845 7667555 www.alcoholics-anonymous.org.uk

• National Drugs Helpline
  Free and confidential phone service that offers advice and information for those who are concerned, or have questions about drugs. 0800 77 66 00

• Narcotics Anonymous
  A fellowship of men and women for whom drugs have become a major problem. The only requirement for membership is the desire to stop using drugs. 0845 3733666 or 020 7730 0009 www.ukna.org

• Gamblers Anonymous
  A fellowship of men and women who have joined together to do something about their own gambling problem and to help other compulsive gamblers to do the same. 08700 508880 www.gamblersanonymous.org.uk

• Victim Support line
  Provides help and information to anyone who has been affected by a crime, including domestic violence and sexual assault. 0845 30 30 900 www.victimsupport.org

• NSPCC
  Provides information, advice and counselling to anyone concerned about a child’s safety. 0800 1111 www.nspcc.org.uk

• Association for Post-Natal Illness
  Provides support to mothers suffering from PNI. 020 7386 0888 www.apni.org

• Trauma Support Centre
  Support and advice to those suffering from post-traumatic stress disorder. 020 8462 5590 or 020 8462 5030 www.traumatic-support.org.uk

We are very grateful that you took part in the National Study of Health and Wellbeing.

Your contribution was invaluable and we hope you enjoyed taking part. All the information you provided in the interview will be treated in strict confidence.

If you have any queries, please do not hesitate to contact a member of the research team. You can call the number above and ask for me, Joanne Phillipson.

Once again thank you for taking part in the study.

Yours sincerely,

Joanne Phillipson

Attention deficit hyperactivity disorder (ADHD) is a life-long condition characterised by sustained and excessive problems with organisation, sustaining attention in activities that require cognitive involvement, hyperactivity, restlessness and impulsiveness to the extent that it significantly interferes with everyday life.

Also see **ASRS** (Adult ADHD Self-Report Scale – v1.1).

**Adults**

Adults were defined as people aged 16 and over.

**Age-standardisation**

Age-standardisation has been used in order to enable different groups to be compared after adjusting for the effects of any differences in their age distributions. When different sub-groups are compared in respect of a variable on which age has an important influence, any differences in age distributions between these sub-groups are likely to affect the observed differences in the proportions of interest.

Age-standardisation was carried out, using the direct standardisation method. The standard population to which the age distribution of sub-groups was adjusted was the Office for National Statistics 2006 mid-year household population estimates for England. Age-standardisation was carried out using the following age groups: 16-24, 25-34, 35-44, 45-54, 55-64, 65-74 and 75 and over.

Age-standardisation was not applied where a variable did not have respondents for every cell in every age band. For example, because there were no widowed men aged 16-24, age-standardisation was not applied to analysis by marital status. In addition, it was often not applied to the treatment and service use tables because of the small sample size of the disordered group (where it was less than 100). All age-standardised tables are labelled as such in the title. See Sections 13.8.4 and 13.8.5 in the Methods Chapter for more detail.

**Alcohol dependence**

Alcohol misuse was measured using two different instruments. First the Alcohol Use Disorders Identification Test (AUDIT) was used to assess hazardous and harmful drinking. Then those who scored 10 or above on the AUDIT were also asked the Severity of Alcohol Dependence Questionnaire - Community (SADQ-C). People who scored four or more on the SADQ-C were considered to be dependent on alcohol.

Also see **harmful alcohol use** and **hazardous alcohol use**.

**Anxiety disorders**

Anxiety disorders include generalised anxiety disorder (GAD), panic disorder, phobias and obsessive compulsive disorder (OCD).

Also see **common mental disorders**.
### ASPD (antisocial personality disorder)

DSM-IV characterises antisocial personality disorder as a pervasive pattern of disregard for and violation of the rights of others that has been occurring in the individual since the age of 15 years, as indicated by three (or more) of seven criteria:

- A failure to conform to social norms;
- Irresponsibility;
- Deceitfulness;
- Indifference to the welfare of others;
- Recklessness;
- A failure to plan ahead; and
- Irritability and aggressiveness.

Also see personality disorder.

### ASRS (Adult ADHD Self-Report Scale-V1.1)

The Adult ADHD Self-Report Scale-V1.1 (ASRS) was used in the APMS 2007 survey to estimate the prevalence of possible ADHD. The six item ASRS screen is a shortened version of the 18 item Symptom Checklist scale measuring the frequency of recent DSM-IV Criterion A symptoms of adult ADHD.

Also see ADHD (attention deficit hyperactivity disorder).

### BPD (borderline personality disorder)

According to the DSM-IV diagnostic criteria for borderline personality disorder (BPD), the key features are instability of interpersonal relationships, self-image and mood, combined with marked impulsivity, beginning in early adulthood. It is indicated by five (or more) of the following criteria:

- Frantic efforts to avoid real or imagined abandonment;
- Pattern of unstable and intense personal relationships;
- Unstable self image;
- Impulsivity in more than one way that is self-damaging (e.g. spending, sex, substance abuse, binge eating, reckless driving);
- Suicidal or self harming behaviour;
- Affective instability;
- Chronic feelings of emptiness;
- Anger; and
- Paranoic thoughts or severe dissociative symptoms (quasi psychotic).

Also see personality disorder.

### CIS-R (Clinical Interview Schedule – Revised)

The CIS-R is an instrument designed to measure neurotic symptoms and disorders, such as anxiety and depression. It comprises of 14 sections each covering a particular type of neurotic symptom. Scores are obtained for each symptom based on frequency, duration and severity in the last week. Individual symptoms scores can be summed to provide an overall score for the level of neurotic symptoms. A score of 12 of more indicates the presence of significant levels of neurotic symptoms while a score of 18 or more indicates symptoms of a level likely to require treatment. Diagnoses of six specific neurotic disorder were obtained by looking at answers to the various sections of the CIS-R and applying algorithms based on the ICD-10 diagnostic criteria for research. The six categories of neurotic disorder are:

- Generalised anxiety disorder (GAD);
- Mixed anxiety and depressive disorder;
- Depressive episode (mild, moderate or severe);
- Phobias;
- Obsessive-compulsive disorder (OCD); and
- Panic disorder.

Also see common mental disorders and neurotic symptoms.
**Common mental disorders (CMDs)**

These are characterised by a variety of symptoms such as fatigue and sleep problems, forgetfulness and concentration difficulties, irritability, worry, panic, hopelessness, and obsessions and compulsions, which present to such a degree that they cause problems with daily activities and distress. The prevalence of neurotic symptoms in the week prior to interview was assessed using the revised version of the Clinical Interview Schedule (CIS-R). A score of 12 or more indicates the presence of significant neurotic symptoms while a score of 18 or more indicates symptoms of a level likely to require treatment.

Also see CIS-R (Clinical Interview Schedule – Revised).

**Community care services**

Community care services included the following in the past year: a psychiatrist, psychologist, community psychiatric nurse, community learning difficulty nurse, other nursing services, social worker, self help/support group, home help/homecare worker or outreach worker.

**Comorbidity**

The co-occurrence of two (or more) different conditions. Comorbidity is associated with increased severity and longer duration of disorders, greater functional disability and increased use of health services. In this report this refers to psychiatric comorbidity only.

**Conditional probability**

Conditional probability is the probability of one event, given that another has occurred. The conditional probability presented in the PTSD chapter is the probability of screening positive for current PTSD given that a trauma has occurred in adulthood. It is based on the most recent trauma, but for some respondents that could be an event that occurred many years ago. It is quite possible that a respondent experienced PTSD as a result of their most recent trauma, are now in remission and no longer symptomatic. The measure of conditional probability presented therefore will be an underestimate compared with that used on most other studies and should not be compared. It will be most misleading for analysis by age, but more useful for comparing vulnerability to development of PTSD given exposure in other groups, especially where the results are age standardised.

Also see PTSD (posttraumatic stress disorder), Trauma, and TSQ (Trauma Screening Questionnaire).

**Current treatment for a mental or emotional problem**

Current treatment for a mental or emotional problem included currently receiving any psychoactive medication, counselling or talking therapy, for a mental, nervous or emotional problem.

**Day care services**

Day care services included community mental health centre, day activity centre, sheltered workshop and other nursing services in the past year.

**Depot injection**

When antipsychotic medication is given by injections on a monthly basis, these are sometimes termed depot injections.

**Depressive symptoms**

Depressive symptoms include low mood and loss of interest and enjoyment in ordinary things and experiences.

**Drug dependence**

Drug dependence is defined in ICD-10 as ‘a cluster of behavioural, cognitive, and physiological phenomena that develop after repeated substance use and that typically include a strong desire to take the drug, difficulties in controlling its use, persisting in its use despite harmful consequences, a higher priority given to drug use than to other activities and obligations, increased tolerance, and sometimes a physical withdrawal state’.

A threshold of three or more of the following occurring in the past 12 months is required for a diagnosis:
• Preoccupation with substance use;
• A sense of need or dependence;
• Impaired capacity to control substance-taking behaviour;
• Increased tolerance;
• Withdrawal symptoms; and
• Persistent substance use despite evidence of harm.

**DSM-IV (Diagnostic and Statistical Manual of Mental Disorders)**

The Diagnostic and Statistical Manual of Mental Disorders, fourth edition (DSM-IV) is a manual that categorises currently recognised mental health disorders.

**Eating disorder**

Eating disorders are disorders characterised by a persistent and severe disturbance in eating attitudes and behaviour, to an extent that it significantly interferes with everyday functioning. Three main subtypes of eating disorder are identified by the DSM-IV: anorexia nervosa, bulimia nervosa, and eating disorder not otherwise specified (EDNOS).

Also see **SCOFF**.

**Economic activity/employment status**

Economically active people are those over the minimum school-leaving age who were working or unemployed in the week before the week of the interview. These people constitute the labour force.

**Employed**

This category includes people aged 16 and over who, in the week before the week of the interview, worked for wages, salary or other form of cash payment such as commission or tips, for any number of hours. It covers people absent from work in the reference week because of holiday, sickness, strike or temporary lay-off, provided they had a job to return to with the same employer. It also includes people attending an educational establishment during the specified week if they were paid by their employer while attending it, people who worked in Government training schemes and unpaid family workers.

People are excluded if they have worked in a voluntary capacity for expenses only, or only for payment in kind, unless they worked for a business, firm or professional practice owned by a relative. Full-time students are classified as ‘working’, ‘unemployed’ or ‘inactive’ according to their own reports of what they were doing during the reference week.

**Unemployed people**

This survey used the International Labour Organisation (ILO) definition of unemployment. This classifies anyone as unemployed if he or she was out of work in the four weeks before interview, or would have been but for temporary sickness or injury, and was available to start work in the two weeks after the interview. Otherwise, anyone out of work is classified as economically inactive.

The treatment of all categories in this survey is in line with that used in the Labour Force Survey (LFS).

**Economically inactive**

The ‘economically inactive’ group includes students, and those looking after home, long term sick or disabled, or retired.
**Educational level**

Educational level was based on the highest educational qualification reported and was grouped as follows:

**Degree / teaching / HND / nursing**
- Degree (or degree level qualification)
- NVQ Level 5
  - Teaching qualification
  - HNC/HND, BRC/TEC Higher, BTEC Higher, City and Guilds
  - Full Technological Certificate, Nursing Qualifications (SRN, SCM, RGN, RM, RHV, Midwife)
  - NVQ Level 4

**A Level or equivalent**
- A levels, SCE Higher
- ONC/OND/BEC/TEC not higher
- City and Guilds Advanced/Final Level
- BTEC National
- GNVQ (Advanced Level)
- Youth Award – Platinum
  - NVQ Level 3

**GCSE or equivalent**
- GCSE (Grades A-C)
- O level passes (Grade A-C if after 1975)
- CSE (Grades A-C)
- CSE Grade 1
- SCE Ordinary (Bands A-C)
- Standard Grade (Level 1-3)
- SLC Lower
- SUPE Lower or Ordinary
- School Certificate or Matric
- City and Guilds Craft/Ordinary Level
- BTEC First
- GNVQ (Intermediate Level)
- NVQ Level 2
  - Youth Award - Gold
  - CSE Grades 2-5
  - GCE O level (Grades D & E if after 1975)
  - GCSE (Grades D, E, F, G)
  - SCE Ordinary (Bands D & E)
  - Standard Grade (Level 4,5)
  - Clerical or Commercial qualifications
  - Apprenticeship
  - GNVQ (Foundation Level)
  - NVQ Level 1
  - Youth Award - Bronze or Silver
  - CSE Ungraded

**Foreign/other qualifications**

**No qualifications**

---

**Equivalised household income**

Making precise estimates of household income, as is done for example in the Family Resources Survey, requires far more interview time than available to this survey. Household income was thus established by means of a show card (see Appendix E) on which banded incomes were presented. Information was obtained from the selected respondent, although they were encouraged to seek further
information from the household reference person when this was someone other than the respondent.

Initially the respondent was asked to state their own aggregate gross income, and were then asked to estimate the total household income including that of any other people in the household. Household income can be used as an analysis variable, but there has been interest in using measures of equivalised income that adjust income level to take account of the number of people in the household. Methods of doing this vary in detail: the starting point is usually an exact estimate of net income, rather than the banded estimate of gross income obtained in the APMS 2007. The method used in the present report utilises the widely used McClemons scoring system, described below.

1. A score was allocated to each household member, and these were added together to produce an overall household McClemons score.

Household members were given scores as follows:

- First adult 0.61
- Spouse/partner 0.39
- Other second adult 0.46
- Third adult 0.42
- Subsequent adults 0.36
- Dependant aged 0-1 0.09
- Dependant aged 2-4 0.18
- Dependant aged 5-7 0.21
- Dependant aged 8-10 0.23
- Dependant aged 11-12 0.25
- Dependant aged 13-15 0.27
- Dependant aged 16+ 0.36

2. The equivalised income was derived as the annual household gross income divided by the McClemons score. Where information on annual household gross income was not available, this was replaced with annual individual gross income.

3. This equivalised annual income was attributed to all members of the household, including children.

4. Households were ranked by equivalised income, and quintiles q1 – q5 were identified. Because incomes were obtained in banded form, there were clumps of households with the same income spanning the quintiles. It was decided not to split clumps but to define the quintiles as ‘households with income up to q1’, ‘over q1 up to q2’ etc.

Equivalent household income quintiles and corresponding income groups:

- Lowest quintile <£10,575
- 4th quintile >=£10575 <£16,195
- 3rd quintile >=£16,195 <£24,700
- 2nd quintile >=£24,700 <£40,384
- Highest quintile >=£40,384

5. All individuals in each household were allocated to the equivalised household income quintile to which their household had been allocated. Insofar as the mean number of people per household may vary between quintiles, the numbers in the quintiles will be equal. Inequalities in numbers are also introduced by the clumping referred to above, and by the fact that in any sub-group analysed the proportionate distribution across quintiles will differ from that of the total sample.
Ethnicity

Respondents identified their ethnicity according to one of fifteen groups. For analysis purposes these groups were subsumed under four headings: white, black, South Asian and other.

<table>
<thead>
<tr>
<th>White</th>
<th>Black</th>
<th>South Asian</th>
<th>Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>White – British</td>
<td>Black – Caribbean</td>
<td>Indian</td>
<td>Chinese</td>
</tr>
<tr>
<td>White – Irish</td>
<td>Black – African</td>
<td>Pakistani</td>
<td>Mixed – white and black Caribbean</td>
</tr>
<tr>
<td>Any other white background</td>
<td>Any other black background</td>
<td>Bangladeshi</td>
<td>Mixed – white and black African</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Mixed – white and Asian</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Any other mixed background</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Other</td>
</tr>
</tbody>
</table>

Due to the heterogeneous nature of the 'other' ethnic group, which includes people of various mixed ethnic origins and Chinese, this category is generally not referred to in the text or charts in the chapters. It is included on tables for completeness.

Gambling activities

Examples of gambling activities were provided to indicate the range of types included:

- Buying lottery tickets or scratch cards for yourself;
- Playing games or making bets for money on the internet (online gambling);
- Playing football pools, bingo or fruit machines;
- Playing games or making bets with friends for money;
- Betting on races and/or with a bookmaker; and
- Table games in a casino.

Also see problem gambling.

GOR (Government Office Region)

Government Office Region (GOR) is the key classification system used for regional statistics. There are nine Government Office Regions in England: North East, North West, Yorkshire and the Humber, East Midlands, West Midlands, East of England, London, South East and South West.

The nine category system has been used since 1998; however, GOR boundaries may change from year to year as they reflect administrative boundaries.

Also see region and SHAC (Strategic Health Authority).

Harmful alcohol use

Harmful alcohol users are those with the most hazardous use of alcohol, at which damage to health is likely. The damage may be physical (for example in terms of liver damage or alcohol induced falls) or mental (for example depressive episodes after heavy consumption of alcohol).

Also see alcohol dependence and hazardous alcohol use.

Hazardous alcohol use

Hazardous alcohol use is defined as an established pattern of drinking which brings the risk of physical and psychological harm. The prevalence in the previous year was assessed using the Alcohol Use
Disorders Identification Test (AUDIT) at the initial interview. An AUDIT score of eight or above indicates hazardous alcohol use.

Also see alcohol dependence and harmful alcohol use.

### Health care services
The health care services used variables included an inpatient stay or outpatient visit in the past quarter, or spoken with a GP in the past year, for a mental or emotional reason. The time frame therefore varied and so it is important to note that this variable does not represent all health care services used for a mental or emotional problem in the past year.

### Health conditions
The APMS 2007 survey adopted a show card approach in measuring self-reported general health and long standing illness. Respondents were asked to identify which (if any) of the conditions listed below they had had since the age of 16.

- Cancer
- Diabetes
- Epilepsy/fits
- Migraine or frequent headaches
- Dementia or Alzheimer’s disease
- Anxiety, depression or other mental health issue
- Cataracts/eyesight problems (even if corrected with glasses or contacts)
- Ear/hearing problems (even if corrected with a hearing aid)
- Stroke
- Heart attack/angina
- High blood pressure
- Bronchitis/emphysema
- Asthma
- Allergies
- Stomach ulcer or other digestive problems
- Liver problems
- Bowel/colon problems
- Bladder problems/incontinence
- Arthritis
- Bone, back, joint or muscle problems
- Infectious disease
- Skin problems
- Other
- None of these

### ICD-10
The International Classification of Diseases and Related Health Problems 10th Revision (ICD-10) is a classification system for diseases and signs, symptoms, abnormal findings, complaints, social circumstances and external causes of injury or diseases, as classified by the World Health Organisation (WHO).

### Income
Also see equivalised household income.

### LCA (Latent class analysis)
Latent Class Analysis (LCA) is a statistical technique for finding subtypes of related cases (latent classes) from multivariate categorical data. The analysis fits a model to the data that (a) identifies a given number of latent classes, and (b) generates probabilities, for each respondent, of their being in each class (one probability per class). An individual is then assigned to the class for which they have the highest probability. In this way, as with cluster analysis, it divides individual cases in a dataset (in this instance ‘cases’ are APMS respondents) into discrete non-overlapping groups.

Also see Appendix B for more detail of the process used in the comorbidity analysis.
Marital status

Respondents were categorised according to their self-reported legal marital status, this included a code for whether the respondent was in a legally recognised Civil Partnership with someone of the same sex.

Also see age-standardisation for an explanation of why analysis by this variable was not age standardised.

Medications

Current use of specific psychoactive medications was asked about using a series of showcards. These included all the most commonly prescribed preparations used in the treatment of mental health problems. Both generic and brand names were shown. Depot injections used in the treatment of psychosis were also included.

Individual medications were grouped into the following categories:

<table>
<thead>
<tr>
<th>Drugs used in the treatment of psychosis:</th>
<th>Anti-depressants:</th>
<th>Hypnotics:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Largactil</td>
<td>Prozac</td>
<td>Planpak</td>
</tr>
<tr>
<td>Stelazine</td>
<td>Lustral</td>
<td>Mogadon</td>
</tr>
<tr>
<td>Haldo</td>
<td>Seroxat</td>
<td>Buspar</td>
</tr>
<tr>
<td>Risperdal</td>
<td>Efexor</td>
<td></td>
</tr>
<tr>
<td>Zyprexa</td>
<td>Nardil</td>
<td>Anxiolytics:</td>
</tr>
<tr>
<td>Clozaril</td>
<td>ManeriX</td>
<td>Valium</td>
</tr>
<tr>
<td>Priadel</td>
<td>Tofranil</td>
<td>Ativan</td>
</tr>
<tr>
<td>Dolmatil</td>
<td>Anafranil</td>
<td>Librium</td>
</tr>
<tr>
<td>Seroquel</td>
<td>Prothiad</td>
<td></td>
</tr>
<tr>
<td>Abilify</td>
<td>Sinequan</td>
<td></td>
</tr>
<tr>
<td>Depixol</td>
<td>Cipramil</td>
<td></td>
</tr>
<tr>
<td>Modecate</td>
<td>Zispen</td>
<td></td>
</tr>
<tr>
<td>Haldo</td>
<td>Clopixol</td>
<td></td>
</tr>
<tr>
<td>Risperdal consta</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Drugs used in the treatment of ADHD:
Ritalin
Strattera

Not all drugs used in the treatment of ADHD were asked about, only two of the most commonly prescribed preparations were included.

Any medication:
Included whether the respondent was taking any of the psychoactive medications listed, including depot injections.

Neurotic symptoms

The CIS-R comprises 14 sections, each covering a particular area of neurotic symptoms as follows:

- Somatic symptoms – are characterised by a physical ache or pain/discomfort that cannot be attributed to a medical condition or to the use of drugs. Somatic symptoms often interfere significantly with a person’s ability to perform important activities.

- Fatigue – the emphasis is on feelings of bodily or physical weakness and exhaustion after only minimal effort, accompanied by a feeling of muscular aches and pains and inability to relax. A variety of other unpleasant physical feelings is common, such as dizziness, tension headaches, and feelings of general instability.

- Concentration and forgetfulness – this includes the inability to concentrate without the mind wandering and forgetting something important to the extent that it interferes with a person’s ability to perform daily activities.
• Sleep problems – are characterised by a disturbance in the person’s amount of sleep, quality or timing of sleep, or in behaviours or physiological conditions associated with sleep.

• Irritability – is associated with feeling short tempered and angry to the extent that it results in arguments or quarrels.

• Worry about physical health – this is defined by feelings of worry about a physical/serious physical illness to the extent that an individual is unable to take their mind off their health worries.

• Depression – is characterised by a lowering of mood, reduction of energy, and decrease in activity. Capacity for enjoyment, interest, and concentration is reduced, and marked tiredness after even minimum effort is common.

• Depressive ideas – are characterised by loss of self-esteem and ideas of worthlessness or guilt. Suicidal thoughts are common.

• Worry – is associated with a persistent feeling of worry about things (other than physical health).

• Anxiety – is defined as generalised and persistent but not restricted to, or even strongly predominating in, any particular environmental circumstances. The dominant symptoms are variable but include complaints of persistent nervousness, trembling, muscular tensions, sweating, light-headedness, palpitations, dizziness, and discomfort.

• Phobias – are a group of disorders in which anxiety is evoked only, or predominantly, in certain well-defined situations that are not currently dangerous. As a result, these situations are characteristically avoided or endured with dread. Individual symptoms include palpitations or feeling faint and are often associated with secondary fears of dying, losing control, or going mad.

• Panic – the essential feature is recurrent attacks of severe anxiety (panic), which are not restricted to any particular situation or set of circumstances and are therefore unpredictable. The dominant symptoms include sudden onset of palpitations, chest pain, choking sensations, dizziness, and feelings of unreality.

• Compulsions – are repetitive, purposeful and ritualistic behaviours or mental acts, performed in response to obsessive intrusion and to a set of rigidly prescribed rules.

• Obsessions – are defined as recurrent and persistent thoughts, impulses or images that are intrusive and inappropriate and cause anxiety or distress.

Neurotic symptoms are not reported on in the APMS 2007 report, but are included in the archived dataset.

Also see common mental disorders and CIS-R (Clinical Interview Scheduler – Revised).

**Percentile**

The value of a distribution which partitions the cases into groups of a specified size. For example, the 20th percentile is the value of the distribution where 20 per cent of the cases have values below the 20th percentile and 80 percent have values above it. The 50th percentile is the median.

**Personality disorder**

Personality disorder is ‘an enduring pattern of inner experience and behaviour that deviates markedly from the expectation of the individual’s culture, is pervasive and inflexible, has an onset in
adolescence or early childhood, is stable over time, and leads to distress or impairment’ (American Psychiatric Association, 1994). Two types of personality disorder were investigated: antisocial personality disorder (ASPD) and borderline personality disorder (BPD).

Also see antisocial (ASPD) and borderline personality disorder (BPD).

**Problem gambling (including pathological gambling)**

‘Problem gambling’ is gambling to a degree that compromises, disrupts or damages family, personal or recreational pursuits. Pathological gambling is a term used to describe a higher subset level of harmful impact that gambling can have on a gambler and on the people around him or her. A diagnosis of pathological gambling is made if a person meets at least five of the following criteria:

- Preoccupied with gambling
- Needs to gamble with increasing amounts of money
- Repeated unsuccessful efforts to cut back or stop gambling
- Restless or irritable when attempting to cut down or stop gambling
- Gambles as a way of escaping from problems or relieving a dysphoric mood
- After losing money gambling, often returns another day in order to get even
- Lies to conceal the extent of involvement with gambling
- Commits illegal acts to finance gambling
- Jeopardises a significant relationship, job, or opportunity because of gambling
- Relies on others to provide money to relieve a desperate financial situation caused by gambling.

Also see gambling activities.

**Psychiatric morbidity**

The expression ‘psychiatric morbidity’ refers to the degree or extent of the prevalence of mental health problems within a defined area.

**Psychoses**

These are disorders that produce disturbances in thinking and perception that are severe enough to distort the person’s perception of the world and the relationship of events within it. Psychoses are normally divided into two groups: organic psychoses, such as dementia and Alzheimer’s disease, and functional psychoses, which mainly cover schizophrenia and manic depression. The disorders discussed in Chapter 5 are based on the World Health Organisation’s International Classification of Diseases chapter on Mental and Behavioural Disorders (ICD-10) Diagnostic Criteria for Research (DCR) and consist mainly of two types: Schizophrenia and affective psychosis such as bi-polar disorder.

Two measures of psychosis are presented in the chapter: ‘probable psychosis’ (consistent with the approach used in the 2000 survey) and ‘psychotic disorder’. These are defined in Section 5.2.2 in Chapter 5.

**PTSD (Posttraumatic stress disorder)**

Posttraumatic stress disorder (PTSD) is distinct from other psychiatric illnesses in that its diagnosis requires exposure to a traumatic stressor (being actually involved in, witnessing or confronted with life endangerment, death, serious injury or threat to self or others) which is accompanied by feelings of intense fear, horror, or helplessness.

Also see conditional probability, Trauma and TSQ (Trauma Screening Questionnaire).

**P value**

A p value is the probability of the observed result occurring due to chance alone. A p value of less than 5% is conventionally taken to indicate a statistically significant result (p<0.05). It should be noted that
the p value is dependent on the sample size, so that the large sample differences or associations which are very small may still be statistically significant. Results should therefore be assessed for their importance on the magnitude of the differences or associations as well as the p value itself.

**Quintile**

Quintiles are percentiles which divide a distribution into fifths, i.e. the 20th, 40th, 60th and 80th percentiles.

**Region**

Tables within chapters provide data for regional analysis both by Government Office Region (GOR) and Strategic Health Authorities (SHAs). The first eight columns represent GORs and SHAs of the same name, while the South East GOR (column nine) is divided into South East Coast SHA and South Central SHA, shown in the final two columns.

Few disorders in this report varied significantly by region, and generally region is not referred to in the text of the chapters. A table presenting the breakdown of each disorder by region is included as this information may be useful for users of the data involved in regional service planning and provision.

Also see GOR (Government Office Region) and SHA (Strategic Health Authority).

**SCAN (Schedule for Clinical Assessment in Neuropsychiatry)**

Schedule for Clinical Assessment in Neuropsychiatry version 2.1 (SCAN), a semi-structured interview that provides ICD-10 diagnoses of psychotic disorder.

**SCID-II (Structured Clinical Interview for DSM-IV)**

APMS 2007 adopts the DSM-IV classification of personality disorder and uses the Structured Clinical Interview for DSM-IV (SCID-II). The SCID-II is available as both a self-completion screen and as a semi-structured clinician administered face to face interview.

**SCOFF**

The SCOFF was administered to all APMS 2007 respondents as part of the self-completion section of the interview. The tool uses five questions from which the word SCOFF was devised, with yes/no response codes. The letters included in SCOFF represent the first letter of the words; Sick, Control, One stone, Fat, Food which are part of questions used to screen for a possible eating disorder.

Also see eating disorder

**Self-harm**

Self-harm without suicidal intentions includes acts such as cutting, burning, swallowing objects, and other self inflicted injuries.

**SHA (Strategic Health Authority)**

From July 2006 a new configuration of Strategic Health Authorities (SHAs) was introduced in England, reducing the number of SHAs from 28 to 10. The boundaries are the same as those of the Government Office Regions with the exception of the South East, which has been divided into South East Coast SHA and South Central SHA.

Also see GOR (Government Office Region) and Region.

**Standardisation**

In this report, standardisation refers to standardisation (or ‘adjustment’) by age (See age-standardisation).

**Suicidal behaviour (includes suicidal thoughts and attempts)**

Suicidal thoughts refers to thinking about taking one’s own life; it does not incorporate feelings about ‘life not being worth living’ or ‘wishing to be dead’. Suicidal attempts are a term used to describe an attempt to take ones life.
| **Tetrachoric correlation** | Tetrachoric correlation analysis was undertaken to examine basic patterns of comorbidity between pairs of disorders. Tetrachoric correlation is appropriate for use with binary data and is used to estimate the Pearson correlation coefficient between two continuous, normally distributed variables from dichotomised versions of those variables. (The Pearson correlation coefficient is widely used as a measure of the strength of linear dependence between two variables).

Tetrachoric correlation coefficients can therefore be interpreted in much the same way as Pearson correlations. In interpreting the strength of a correlation, 0.5 or more is widely used in social sciences to indicate a strong correlation between two variables.

See Chapter 12 and Appendix B for more detail of the process used in the comorbidity analysis. |
| **Trauma** | According to DSM-IV, traumatic stressors are events in which an individual experiences, witnesses, or is confronted with life endangerment, death, or serious injury or threat to self or others. Traumatic stressors are distinct from and more severe than generally stressful life events, such as divorce or expected bereavement.

Also see conditional probability, PTSD (posttraumatic stress disorder) and TSQ (Trauma Screening Questionnaire) |
| **TSQ (Trauma Screening Questionnaire)** | APMS 2007 included the Trauma Screening Questionnaire (TSQ), a short screening tool designed to identify likely cases of PTSD. The TSQ consists of the re-experiencing and arousal items from the Posttraumatic Stress Symptom Scale – Self-Report, aligned to DSM-IV criteria.

Also see conditional probability, PTSD (posttraumatic stress disorder) and trauma. |
| **Treatment** | Also see current treatment for a mental or emotional problem. |
This report presents findings of a survey of psychiatric morbidity among people aged 16 and over living in private households in England. The survey was commissioned by The NHS Information Centre for health and social care, and is one of a series of surveys of mental health in different population groups.

Each of the main disorders and behaviours covered by the 2007 survey is discussed in a separate chapter. The chapters present disorder prevalence by age, sex, ethnicity, marital status, region, and the level and nature of treatment and service use. Where the disorder was also covered in the general household population surveys carried out in 1993 and 2000, change in rate is also considered.

National Centre for Social Research
www.natcen.ac.uk

The National Centre for Social Research (NatCen) is an independent institute specialising in social survey and qualitative research for the development of public policy. Research is in areas such as health, housing, employment, crime, education and political and social attitudes. Projects include ad hoc, continuous and longitudinal surveys, using face to face, telephone and postal methods; many use advanced applications of computer assisted interviewing.

Department of Health Sciences, University of Leicester
www2.le.ac.uk/departments/health-sciences

The Department of Health Sciences at the University of Leicester is a research-led department with established strengths across epidemiology, medical statistics, public health, primary care, health services research, and psychiatry. Structured to support innovative multidisciplinary and multi-method solutions to research questions, it conducts high quality scientific research that can inform policies and practices aimed at securing people’s health and well-being.

The NHS Information Centre for health and social care
www.ic.nhs.uk

The NHS Information Centre is England’s central, authoritative source of health and social care information. Acting as a ‘hub’ for high quality, national, comparative data, it delivers information for local decision makers, to improve the quality and efficiency of care.
