Introduction

The Millennium Cohort Survey, Sweep 4 (MCS4) was carried out using computer assisted personal interviewing (CAPI) and computer assisted self-interviewing (CASI). The survey instrument is a computer program written in a software package called Blaise. This document is a paper representation of this computer program.

1.1 Structure of the questionnaire

This paper representation covers the following sections of the CAPI questionnaire for MCS4: child cognitive assessments, child physical measurements and parent physical measurements. Details of the cognitive assessments and physical measurements can be found in 'Millennium Cohort Study Sweep 4: Technical Report' by Gatenby R.M. & Huang Y, 2009, National Centre for Social Research.

1.2 Features of the documentation

1.2.1 Module

The CAPI questionnaire comprises modules that contain a list of all the questions, answer options, and the routing conditions or 'rules' which govern when a particular question should be asked. In general, the heading of each module summarises the topics covered and gives the module title.

1.2.2 Routing instructions

Routing instructions are shown at appropriate points. The routing condition is both explained in words and given in terms of the logical command. The routing condition is displayed immediately before the first question to which it applies and is indicated either by a box headed "Routing" or by an 'IF' statement. If indicated by an 'IF' statement, the end of the influence of a particular routing condition is indicated by an 'END OF FILTER' instruction.

1.2.3 Textfill

In some cases the text of a question may be varied automatically to take account of the particular circumstances of the respondent using a 'textfill'. These possible different wordings are defined along with the circumstances in which they are used. In other words, textfills are used to tailor the question wording to the respondent's circumstances. Textfills are preceded by '[' and followed by ']'. When more than one possible textfill appears within a question, they are separated by '/' .

For example, reference to the name of the cohort child or other persons in the household will be documented as [^Cohort child's name] and [^Name of person] respectively.

1.2.4 Checks

An advantage of CAPI questionnaires is that checks can be included in the program to alert interviewers when an unlikely or impossible response has been entered.

'Hard' checks can be used to prevent logical inconsistency (for example so that a child cannot be older than his / her parents). In such circumstances, a warning screen is activated

to alert the interviewer to the problem. The interviewer cannot bypass hard checks - they must identify the problem and resolve the discrepancy before proceeding.

'Soft' checks are used to bring improbabilities to the attention of the interviewer. For example, if the weight of the child is higher or lower than expected. In such situations the interviewer is instructed to investigate the improbable answer and make any necessary corrections. If the interviewer is confident that the information given is correct, they may suppress the warning and continue with the interview.

Most modules contain checks so that interviewers can resolve/check them with the respondents during the course of interview. Checks are referenced at the question at which they occur (e.g. Check FC1) and specified in detail at the end in this documentation.

1.2.5 Help screen

Some modules contain a help screen, which is a text box providing additional information to facilitate defining and coding answers during the interview. The help screen is activated by the interviewer by pressing F9. Help screens are indicated at the question at which they occur, and are described below:

WORD READING HELP SCREEN

IF THE CHILD READS THE WORD BROKEN INTO THE CORRECT SYLLABLES (NOT AS A WHOLE WORD) SAY: 'That was a good try. Please read it again with all the sounds put together.'

IF THE CHILD SAYS THAT THEY DON'T KNOW A PARTICULAR WORD OR REFUSES TO READ A WORD, ENCOURAGE THEM TO ATTEMPT IT ONCE MORE BY SAYING: 'What do you think it might be?' OR 'Why don't you give it a try?'

IF CHILD IS READING CONFIDENTLY SAY 'Thank you' OR 'OK' AFTER EACH ROW OF WORDS. OTHERWISE SAY IT AFTER EACH WORD.

WHERE NECESSARY MOVE CHILD ON TO THE NEXT ITEM BY SAYING: 'Please try the next word'

IF THE CHILD SPONTANEOUSLY REPEATS A WORD, CODE THEIR FINAL RESPONSE.

CODE A 'DON'T KNOW' / 'REFUSAL' OR OTHERWISE INCORRECT RESPONSE (E.G. NO RESPONSE) AS 'NO'.

PROGRESS IN MATHS HELP SCREEN

WHERE CHILDREN ARE ASKED TO RING THEIR ANSWER, ANY CLEAR METHOD OF RESPONSE IS ACCEPTABLE

DO ANSWER QUESTIONS ABOUT THE PROCEDURE, AND EXPLAIN NON-MATHEMATICAL WORDS/EXPRESSIONS

DO NOT HELP WITH THE MATHEMATICAL CONTENT OF QUESTIONS, JUST PROVIDE SUITABLE ENCOURAGEMENT E.G. 'DO THE BEST YOU CAN'

IF AN ANSWER IS WRITTEN ON THE ANSWER LINE, IGNORE ALL OTHER WORKING. IF NOT, ACCEPT AN UNAMBIGUOUS, CORRECT ANSWER WRITTEN ANYWHERE ON THE PAGE.

IF A CORRECT AND AN INCORRECT RESPONSE IS SHOWN, DO NOT ACCEPT EITHER RESPONSE UNLESS THE INCORRECT RESPONSE IS CLEARLY NOT INTENDED AS FINAL.

UNLESS STATED OTHERWISE, ACCEPT NUMERICAL RESPONSES WRITTEN IN WORDS.

IF THE CHILD SAYS THAT THEY DON'T KNOW HOW TO DO A PARTICULAR ITEM OR REFUSES TO ATTEMPT AN ITEM, ENCOURAGE THEM TO TRY BY SAYING: 'What do you think it might be' OR 'Why don't you give it a try'

IF THE CHILD ASK FOR HELP ON AN ITEM OR ASKS YOU HOW TO DO IT, SAY: 'Do whatever you think is best

PATTERN CONSTRUCTION HELP SCREEN

IF THE CHILD BUILDS THEIR PICTURE ON OR AGAINST THE MODEL OR PICTURE, SAY: Please make your pattern down here AND POINT TO THE TABLE / FLOOR.

IF CHILD ASKS ABOUT STOP WATCH SAY: I'm going to time you with this watch, but I want you to work carefully and try to get these patterns right.

IF CHILD EXCEEDS TIME LIMIT AND IS NOT NEAR COMPLETION OF THE TASK SAY: Let's try another one.

FOR C08 – C26

IF THE CHILD BUILDS THEIR PICTURE ON OR AGAINST THE MODEL OR PICTURE, SAY: Please make your pattern down here AND POINT TO THE TABLE / FLOOR.

IF THE CHILD IS DISTRACTED BY THE SIDES OF THE CUBES, POINT TO THE TOP OF THE CUBES AND SAY: The sides don't matter. Make the tops look like this.

IF CHILD EXCEEDS TIME LIMIT AND IS NOT NEAR COMPLETION OF THE TASK SAY: Let's try another one.

BODY FAT PERCENTAGE HELP SCREEN

INTERVIEWER: IF PARENT ASKS FOR FEEDBACK ON BODY FAT PERCENTAGE SAY THE FOLLOWING AS APPROPRIATE:

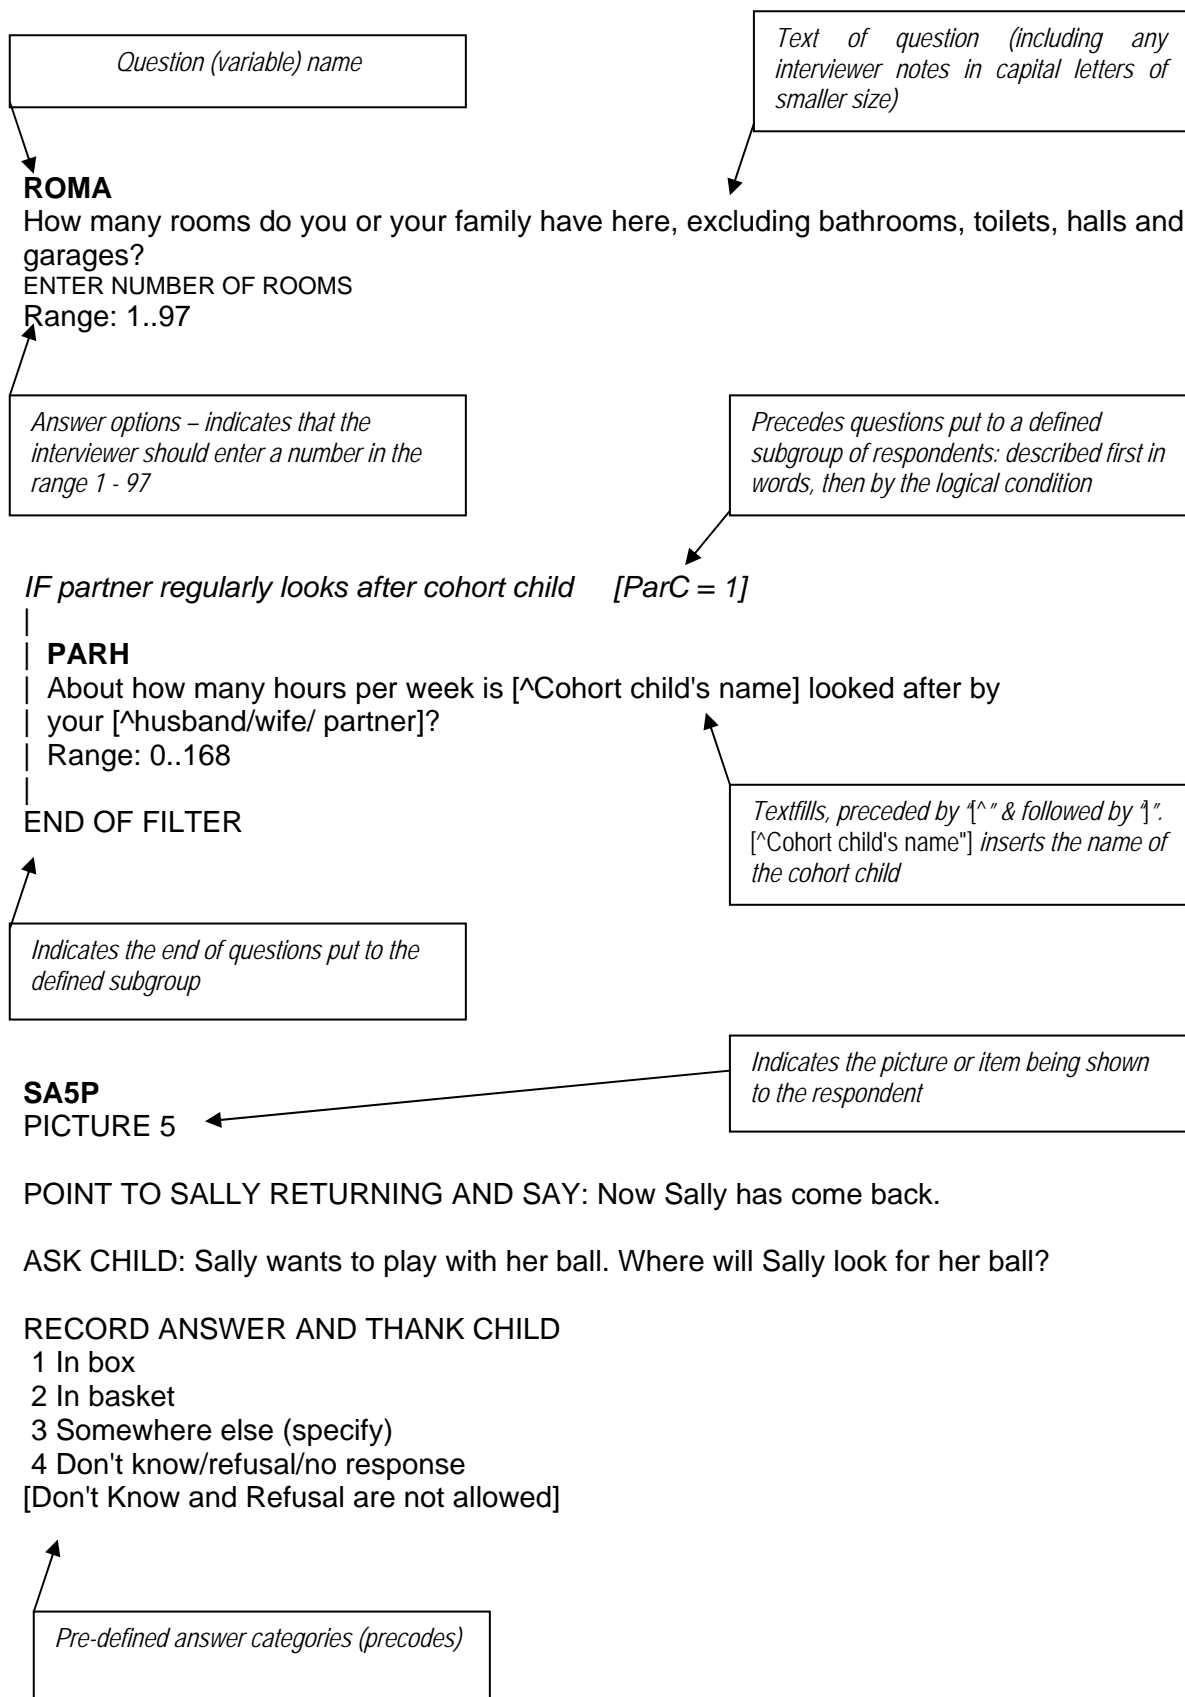

IF THE CHILD IS FEMALE AND BODY FAT = 15-26% OR IF THE CHILD IS MALE AND BODY FAT =12-21% SAY:

This is within the healthy body fat range for this age group.

Any other percentage SAY:

Your child's particular measurement was outside the healthy body fat range for this age group today. However, body fat can vary with the time of day and temperature, as well as with how much your child has had to drink or whether s/he has exercised recently. So, the measurement today is not necessarily a cause for concern but if you are worried about your child's weight then you should contact your GP.

1.3 Example: documentation

1.4 Example: checks

In the main body of the documentation the check is referenced as follows:

OTPM

How many other places have you lived at?

Range: 1..97

CHECK HA3

Then the check is fully described in the 'Checks' section at the end of the documentation:

CHECK HA3

IF number of places lived at since last interview answered [Otpm=RESPONSE]

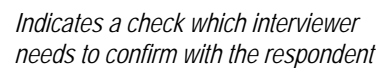

|
| *IF the number of places is greater than 8 [Optm>8]*

||
|| That seems rather a lot (^Optm).
|| Please check and amend if necessary.

||
| END CHECK

|
END OF FILTER

*Indicates a check which interviewer
needs to confirm with the respondent*
