FILTERS APPLIED TO THE ASHE DATASET

The ASHE published tables apply filters, documented as footnotes, to both weekly (which also includes hourly) and annual pay variables.

The weekly filter is employees on adult rates whose pay for the pay period was not affected by absence. Additionally employees who do not have a valid work office region and who are less than 16 years old are filtered because these variables are used in weighting.
(adr = 1 AND lop = 2 AND wgor > 0 AND age > 15)

The annual filter is employees on adult rates who have been in the same job for more than one year. Additionally employees who do not have a valid work office region and who are less than 16 years old are filtered because these variables are used in weighting. Employees with missing annual gross salaries which could not be imputed because their pay in the pay period was affected by absence are also filtered i.e. annual gross pay of 0 or less.
(adr = 1 AND sjd = 1 AND agp > 0 AND wgor > 0 AND age > 15)

VARIABLES IN THE ASHE DATASET

Note

Your dataset may not contain all variables, depending on the variables that you specified in your requirements.

There are two discontinuities in the ASHE datasets resulting from changes to the ASHE methodology. In 2004 supplementary information was included in the ASHE methodology and in 2006 special arrangements was treated as an extra stratum and occupations were coded using an automatic coding tool.

For continuity with the backseries to prior years, two datasets have been generated at each of these discontinuities (for 2004 and 2006). The 1997 to 2004 series of datasets excluding supplementary is identified by numstrata = 1, the 2004 to 2006 series of datasets including supplementary information is identified by numstrata = 3 and the series for 2006 and later years is identified by numstrata = 4.

Name	Description	Comments
Year	Year	Year for which the inquiry was conducted. The inquiry reference date is always in the April of the year. No missing values.
