SCOTTISH SOCIAL ATTITUDES 2010

DOCUMENTATION OF
THE BLAISE QUESTIONNAIRE

Notes:

1. This is an edited documentation of the Blaise program. Not all variables that appear here are on the SPSS file. (Those that are not are marked with a '$'). Similarly, not all derived variables that are on the SPSS file are mentioned here. See also separate documentation of derived variables.
2. Unless otherwise specified, 'Don't Know' is code 8 for single column questions, code 98 for two column questions, and so on.
3. Unless otherwise specified, 'Refusal/Not answered' is code 9 for single column questions, code 99 for two column questions, and so on. Where there is an explicit 'Refusal' code (usually code 7 or 97), then code 9 (or 99 and so on) is reserved for 'Not answered' only.
4. Sections in brackets and italics were textfilled as appropriate on the interviewers' computers.
5. Routing instructions appear above the questions. A routing instruction should be considered to stay in force until the next routing instruction.
6. '(NOT ON SCREEN)' means that the question did not appear on the interviewers' or editors' screens. '(EDIT ONLY)' means it appeared on screen for the editors but not the interviewers. Individual codes marked 'EDIT ONLY' were used by the editors to reclassify 'other' answers, but did not appear on screen for the interviewer or on showcards for respondents.
7. For some questions respondents could give an answer other than one of those listed in the codeframe (these are generally indicated in code frame by the instruction: (WRITE IN). Such answers were recorded verbatim and examined during the editing process to see whether any could be 'back-coded' to one of the existing answer categories. These are not available on the SPSS file and have not been detailed within this documentation.

3 Main sample weight. See also [WtRural], [Wtremote], [Wturban] for urban/rural analysis. The way [WtFactor] is calculated was improved from SSA 2005. Pre-2005, the weighting only corrected for over-sampling of rural areas and differential individual selection probabilities in households of different sizes. From 2005, a more sophisticated weighting scheme has been used which also takes account of non-response and ensures that the weighted data matches the sex-age profile of Scotland as a whole, based on mid-year estimates from the General Register Office for Scotland. Where comparing data from 2009 with data from pre-2005, there is a small chance that this change in the way the weights are calculated might impact on any differences found. For this reason, the dataset also includes a variable, [OldWt], which uses the old weighting scheme and can be used to double-check any changes over time.

4 SIMD quintile variable in archived dataset is [qsimd]

5 SIMD 15% most deprived variable in archived dataset is [simd15]

6 Some of the questions in the 'Attitudes to different groups of people living in Scotland today' and the 'Devolution and Independence' modules were asked in a randomised order, based on whether they had an odd or even serial number. This variable (OddEven) can be used to select the appropriate half of the sample for analysis.

partnership prior to 2009.
