What is the Young Life and Times Survey?

The Young Life and Times (YLT) survey is a constituent part of ARK, a resource providing access to social and political information on Northern Ireland (www.ark.ac.uk). All too often the opinions of young people are ignored when decisions are made about many of the issues involving them. Thus, the aim of the Young Life and Times survey is to record the views of 16-year olds in Northern Ireland on a range of issues such as community relations, health, politics, sectarianism and education. By inviting respondents to suggest issues for the next year’s survey, we make sure that the topics covered are relevant to the lives of 16-year olds in Northern Ireland today.

Links with other surveys

The Northern Ireland Life and Times (NILT) survey, an annual survey that began in 1998, records the attitudes and values of adults aged 18 years and over in Northern Ireland. The range of topics included in NILT varies each year, although many modules are repeated over time to monitor changing attitudes on specific social policy issues. In particular, questions on community relations and political attitudes are included each year in order to track how/if attitudes change within the rapidly shifting social and political environment of Northern Ireland. Full details can be found on the NILT website at www.ark.ac.uk/nilt.

From 1998 to 2000, a Young Life and Times (YLT) survey ran alongside NILT. All 12-17 year olds living in the household of an adult NILT respondent were asked to partake in YLT. This was a paper questionnaire with questions mostly being a subset of those asked in the adult questionnaire. One of the main aims of this approach was to enable the analysis of the attitudes of young people and compare them with the attitudes of their parents. However, in 2001 the survey team undertook a review of YLT as the level of use of the young person’s survey came nowhere near the level of use of the adult survey.

Consultation with a variety of users from the academic and voluntary sectors, found that:

- There was an extremely high level of interest in a young person’s survey.
- There was little interest in linking the attitudes of children to those of their parents.
- There were concerns that questions suitable for 17 year olds were not always suitable for 12 year olds (and vice-versa) and that this was restrictive.
- There was strong policy interest in the views of young people in the areas of community relations, political attitudes, education and employment.
- There was a concern that young people were not interviewed by young people and that the optimal survey design required this.
- There was a concern that the survey did not involve young people in the design of the questions.
- Interviewing young people in their own homes – often in front of their parents – was problematic.
• However, interviewing young people in schools – often with peer effects – was equally problematic and had the additional coverage problems of children excluded from schools and low numbers of 16 and 17 year olds.

Based on the findings of the consultation exercise, the current methodology was designed to address as many of these issues as possible and the first YLT survey using this methodology was undertaken in 2003.

Technical details of 2014 survey

Sample
The survey sample was taken from the Child Benefit Register. Since 2004, a statutory instrument and explanatory memorandum (Tax Credits (Provision of Information) (Evaluation and Statistical Studies) (Northern Ireland) Regulations 2004) is in place which allows ARK to access the Child Benefit Register for the YLT survey.

Child Benefit is a benefit for people bringing up children and is paid for each child. Therefore, the Child Benefit Register contains information on all children for whom Child Benefit is claimed. Until March 2013 this was a universal benefit, but in April 2013 legislation came into place which introduced means testing with regard to Child Benefit payments. Higher earners are now no longer entitled to receive Child Benefit. This meant a potential significant change to the YLT sampling strategy. Alternative universal or random sample frames for YLT (such as the GP register) were considered prior to the 2013 survey but found unsuitable or unworkable. However, consultations with HMRC, who administer Child Benefit payments across the UK, revealed that the names and addresses of those 16-year olds affected by the Child Benefit Payment changes and those whose parents opted out of receiving Child Benefit are still held at HMRC, for example, in order to issue National Insurance Cards. Thus, the sample of 16-year olds available to ARK for the YLT survey remained universal and unaffected by the legislative changes.

As in previous years, the sample for the 2014 survey was provided to ARK directly by HMRC. In June 2014 we contacted HMRC to confirm that they were again willing to provide the sample to us and advised them of one significant change. Due to an increase in the number of funders, we needed to run a split survey (i.e. not everybody would be asked the same questions), and, as such, we needed to increase our sample size. Thus, whereas in previous years the sample included all 16-year olds born in February and March, the 2014 sample would also include those born in January. This was due to the fact that we intended to have a split sample as the number of requests for inclusion of questions had been unusually high. HMRC were receptive to our request, and in August 2014 a Service Level Agreement (SLA) was signed between ARK and HMRC about the sample provision. Within this agreement ARK laid out the arrangements for the safety and security of the personal data of respondents and included arrangements for a safe transport and storage of the files as well as destruction of the address file after completion of the data collection.
Advance letter
Fieldwork was conducted from October to December 2014. All administration of the mailout for the survey was undertaken by an independent mailing company. An initial letter was sent in September 2014 to all eligible 16-year olds and provided an introduction to the survey; the wording of this letter had been agreed with HMRC. Recipients of the letter were given the opportunity to say if they did not want to participate in the survey. A few parents contacted the survey team and opted out on behalf of their sons/daughters, predominantly due to their learning or sensory disabilities.

In October 2014, a second letter was then posted out to all those 16-year olds who had not opted out of the survey. This consisted of a letter from the project team, a paper questionnaire and a return envelope with a FREEPOST address. This letter contained a unique identifier (with a check letter) under the address, which was highlighted as “Your identification number”. This letter provided more information about the survey, including the aims of the project and the three possible methods of completing the questionnaire. Recipients were also advised that there was a draw for five prizes of £100 for which all respondents completing the questionnaire were eligible, and, as an extra incentive, that the first 100 online entries would receive a £10 shopping voucher.

Survey Content
Given that the 2014 survey was a split survey two questionnaires were produced; in the paper versions these were orange and purple. While the majority of questions were the same on both questionnaires, some modules were only included in one survey version. The list of content in each version of the survey questionnaire can be found in Table 1. Respondents randomly received either the orange or purple survey questionnaire.

At the end of the 2013 survey, respondents had been given the opportunity to identify questions they felt should be included in the next YLT survey. Based on these suggestions and following from previous YLT surveys the 2014 survey closed with three questions on whether respondents felt they would stay or leave Northern Ireland; what would make them leave and if they left would they return. These were included in both survey versions

* Note: The modules on autism, Rights in Education and attitudes to integrated education were also included in the 2014 Kids Life and Times (KLT) survey. For more details visit www.ark.ac.uk/klt.

Completing the questionnaire
The fieldwork period lasted from 23 October – 31 December 2014.

Respondents could choose one of three methods for completing the questionnaire:
- They could take part by phone, having quoted their identification number and check letter.
- They could complete the questionnaire online – inputting their personal identifier to enter that part of the YLT website.
- They could complete the paper questionnaire and post it back in the pre-stamped envelope.

After approximately ten days, a reminder letter with a second questionnaire was sent out to addressees who had not made contact of any kind.

Multiple responses from respondents (e.g. one online and one postal response) were prevented by daily recording of the receipt of completed questionnaires. Once a respondent had submitted an online questionnaire, his or her unique identifier was automatically disabled. Nine respondents completed multiple surveys (three the orange version and six the purple version), either two paper surveys or one paper and one online survey. One completed survey each from these respondents was
disregarded. We also received one completed survey where there was evidence that the respondent did not respond to questions seriously was, This survey was also disregarded.

**Response rate**

5,692 names of eligible respondents were on the database of Child Benefit recipients received from HMRC/DSDNI. 46 letters or questionnaires were returned because the addressee had moved or was unknown at the address This leaves an overall sample of 5,642 eligible respondents in total.

In total, 13 young people or their parents opted out of completing the 2014 YLT survey at different stages. Commonly this was because they young person suffered from a learning disability or mental illness.

Overall 1,939 completed the questionnaires (double completions disregarded) were received by the end of the fieldwork period. This represents a response rate of 34.4%

Table 2 shows that the most popular mode of completing the survey remains postal/paper completion. The Table also shows that the response rate among those who received a purple questionnaire version was higher. Telephone responses were offered as in every year, but no phone completions were recorded at all in 2014.

**Getting the data**

Tables of results from the 2014 survey were made available on the YLT website. Users can also download the data in SPSS portable file format from the website to carry out their own statistical analyses. The YLT website is available at [www.ark.ac.uk/ylt](http://www.ark.ac.uk/ylt).
Using the data
This documentation is intended to provide background information to the survey and to the survey and sampling methodologies. However, if you require any further technical information, please contact us (see details below).

The data have been tested extensively, but if you find anything that looks like a mistake, please let us know as soon as you can. Please note that this data should not be weighted.

A helpline service is also available for anyone who has a query about the survey or the results (see contact details below). Alternatively you can use the help section on the YLT website (www.ark.ac.uk/ylt/help/).

In order to maintain anonymity, the open ethnicity variable has been recoded into the categorical ETHNCAT variable. Open responses to the question on respondents religious background have been recoded. The derived religion variable RELIGCAT consists of the following categories: ‘Catholic’, ‘Protestant’, ‘Other religion’ and ‘No religion’. Open responses to other questions that may compromise the anonymity of respondents are not available as part of the downloadable dataset, but will appear as a list of all responses in the results section on the YLT website.

This dataset should not be weighted.

Contact information
For all queries relating to the survey, please contact:

Acknowledgements
We would like to acknowledge the support by Her Majesty’s Revenue and Customs in providing the sample.
We particularly appreciate the time and effort taken by all the 16-year olds who responded to the survey.
We are grateful to our funders, which include the Office of the First Minister and Deputy First Minister (OFMDFM), Department of Education Northern Ireland (DENI), Integrated Education Fund (IEF), Northern Ireland Commissioner for Children and Young People, and the Centre for Behaviour Analysis (CBA) Queen’s University Belfast.
