Background to the Crime Survey for England and Wales (CSEW)

The Crime Survey for England and Wales (CSEW) is a face-to-face victimisation survey in which people resident in households in England and Wales are asked about their experiences of a range of crimes in the 12 months prior to the interview. Respondents to the survey are also asked about their perceptions of crime and attitudes towards crime related issues such as the police and criminal justice system.

Previously known as the British Crime Survey (BCS), the survey was first conducted in 1982. In 2001, the then BCS, moved to an annual format with continuous sampling. The survey now only covers England and Wales with separate surveys of Scotland and Northern Ireland. However, the first and third surveys were carried out in England, Wales and Scotland (hence 'British' Crime Survey).

The CSEW uses the Postcode Address File (PAF) to select a representative sample of households in England and Wales. The CSEW does not cover the population living in group residences (such as halls of residence and prisons) or other institutions, nor does it cover crime against commercial or public sector bodies.

The core sample size has increased over the years from around 11,000 in the earlier cycles to 35,371 in the 2013/14 CSEW.

Fieldwork
At each sampled address the interviewer establishes that the address is eligible; ineligible addresses include vacant properties, second homes, non-residential addresses and establishments where people are living in group residences. If one PAF address leads to two households, the interviewer randomly selects which household to approach. Once the household is determined to be eligible, individuals aged 16 or over in the selected household are listed and one adult is randomly selected for interview. No substitutes are permitted.

Face-to-face interviews are carried out using computer-assisted personal interviewing (CAPI) where interviewers record responses to the questionnaire on tablet computers. Self-completion modules are used in the CSEW to collect information on topic areas that respondents could feel uncomfortable talking about to an interviewer.

The questionnaire
The CSEW questionnaire consists of question modules such as victimization, anti-social behavior and demographic characteristics of the respondent and household.

Within modules there can also be further filtering with so that some questions are only asked of smaller sub-samples. Respondents are randomly allocated into one of four sub-samples, A, B, C or D which each represent around a quarter of the overall sample.

Further information about CSEW can be found on the Office for National Statistics’ Crime Survey for England and Wales webpage.
Crime Survey for England and Wales (CSEW) 2013-2014 Teaching Dataset

This teaching dataset is based on the Crime Survey for England and Wales 2013-2014.

It contains data for all 35,371 cases from the CSEW 2013-2014 (adult non-victim form dataset) for a selection of variables.

Variables
The data contains 127 variables covering the following topics:

- demographic details
- perceptions of crime module
- experience of crime
- antisocial behavior
- attitudes towards the Criminal Justice System

Most variables are individual variables, and require individual based analysis. Household-level variables include the number of adults (nadults) and children (nchil). There is a mix of discrete and continuous variables. A full list of variable names and labels is on page 6 and variable frequencies are provided from page 10.

Most of the variables come directly from the CSEW 2013-14 dataset deposited at the UK Data archive. The documentation for the CSEW 2013-2014 includes a copy of the questionnaire.

Derived variables
The dataset contains new scalar variables for teaching and learning. They each provide measures of key concepts and have been derived from multiple variables from the CSEW 2013-14 (using principal components analysis). For example, worryx, measures worry about crime with a higher score indicating a higher level of worry. This new general measure was derived using five variables relating to worry about specific types of crimes (wburgl wmugged wraped wattack wraceatt). Most of the original variables used to create the new scalar variables are also in the teaching dataset (it is therefore important to note that the scalar variables should be used as if they are independent of the variables used to create them).

The dataset also contains the following changes from the original CSEW dataset.

1. The variables measuring the deprivation of respondents’ local area are deprivation quintiles, which rank areas into five groups indicating the most to least deprived. These have been calculated from deprivation deciles in the main CSEW 2013-2014 dataset.
2. The original CSEW weighting variable for individual level analyses (c11cindivwgt), which adjusts for unequal probabilities and non-response, has been scaled to have a mean of 1.

All variables created specifically for this dataset are suffixed with an x and the Stata script used to create the extra variables from the original crime survey can be found on page Error! Bookmark not defined.
How to obtain the CSEW 2013-2014 Teaching Dataset
To access the CSEW 2013-2014 Teaching Dataset data, you must login/register with the UK Data Service. All users, including those outside the UK, can obtain a login – see login and registration help for details, including what to do if you have forgotten your login details. Registered users can download/order the dataset direct from the UK Data Service website via its catalogue search engine Discover, or via the CSEW series page found under Get data > Key data.

The Teaching Dataset is available in two formats: SPSS and Stata.

Weighting the dataset
The Teaching Dataset contains an individual level weight called IndivWgtx and a household weight called HhdWgtx. Weights adjust for unequal selection probabilities and non-response and users of the data should use the appropriate weight.

Missing values within the dataset

Don't know and refusal
When asked a question, survey respondents may respond ‘do not know’ or refuse to answer. Such responses are recorded using specific codes; for example, don’t know is often coded as 9. It is useful to get variable frequencies first in any analysis to examine the distribution of responses and the proportion of ‘don’t know’ and ‘refusal’ responses. In most analysis, ‘refusal’ codes are excluded. ‘Don’t know’ codes are also usually excluded unless there is interest in ‘don’t know’ responses such as in the case of attitudinal questions. In the SPSS version of this teaching dataset do not know responses and refusals are set as missing values.

System missing
Variables within the dataset can contain empty cells where no data is recorded. In SPSS empty cell are automatically coded as ‘system missing’ which is denoted by a dot (.). In STATA ‘system missing’ data are also denoted by a dot (.). For some variables in the dataset, only a sub-set of respondents were asked the question due to the modular design of the survey (see the discussion of the Questionnaire above). Where the question was not asked, a system missing response is recorded and therefore some variables have a large number of system missing responses.

Notes for teachers
This dataset has been designed for teaching purposes only. As the data comes from SN 7616 Crime Survey for England and Wales 2013-2014 weighted analyses can be taken to be representative of England and Wales as a whole. Students may therefore use these results to discuss crime-related statistics and attitudes to the Criminal Justice System at the national level in their reports while they learn about statistics, statistics packages and large-scale national surveys.

Please use the original for all non-teaching purposes. The full datasets is available for download (after registration) from the UK Data Service website: www.ukdataservice.ac.uk.

The Teaching Dataset is available under the End User Licence. For more information about making it available to your students, see the pages about using teaching data with your class here: http://ukdataservice.ac.uk/use-data/teaching/practical-resources.aspx
List of variables in the CSEW 2013-2014 Teaching Dataset

Variable names and labels correspond to the main CSEW 2013-2014 dataset, where applicable. Variables derived for this teaching dataset are suffixed with an ‘x’.

For variables from question modules asked to only specific sub-samples, the sub-samples are indicated in brackets after the variable label.
