## INTRODUCTION

The Millennium Cohort Study Sweep 6 (MCS6) Survey was carried out using computer-assisted personal interviewing (CAPI) and computer-assisted self interviewing (CASI), both scripted in the software package IBM SPSS Data Collection. This document is the paper documentation of the computer-based script.

### Structure of the questionnaire

The document covers the following sections of the CAPI questionnaire: the household questionnaire, main respondent questionnaire, partner questionnaire or partner proxy questionnaire.

The household questionnaire is the first section of the CAPI and completed by someone in the household over 16 years of age (usually the main respondent from prior sweep if still present). After collecting information about the household, CAPI determined the main respondent and partner respondent (if applicable).

The main respondent interview was carried out with a parent or carer (usually the mother) of the child. The main respondents answered questions via CAPI and CASI which included questions about their child(ren).

The partner interview is a shorter CAPI and CASI questionnaire to be completed by the partner of the main respondent, which is usually the child's father or father-figure. On occasions where the partner was unavailable during the fieldwork period or incapable of taking part, the main respondent completed a proxy partner interview.

### Features of the documentation

#### *Module*

The questionnaire is comprised of modules on specific topics which contain a list of all questions, answer options and routing conditions (or the rules that govern when a question should be asked).

#### *Questions and answers*

Each question has been given a unique name that can be identified by its bold, blue formatting. At most questions the respondent was given a pre-defined list, either read out by the interviewer or written on a showcard, from which to choose his/her answer. At other questions the respondent was not offered a pre-defined list and the interviewer codes his/her answer into a pre-defined list or enters it verbatim.

Most questions are single-coded questions, that is, questions where the respondent may only give one answer. Unless otherwise stated, a question is single coded. If multiple responses may be coded, the question will include an interviewer note indicating this, usually 'CODE ALL THAT APPLY'. However, some answers in multi-coded questions may be exclusive codes, meaning that no other response may be coded in conjunction.

Finally, unless otherwise stated, 'Don't know' and 'Refusal' are valid answers at all questions. It is stated in the answers if these are not allowed.

In addition to questions, there is some text labelled 'PAUSE'. This is introductory text that the interviewers on screen prior to seeing the question that proceeds it.

### *Routing*

Routing instructions are fully detailed in italics at appropriate points. The routing condition is both explained in words and given in terms of the logical command. The expressions '<', '=', '>' are used to denote 'less than', 'equal to' and 'more than', respectively. The term '<>' means 'not equal to'. The routing condition is displayed immediately before the first question to which it applies and is indicated by an 'IF' statement. The end of a particular routing condition is indicated by an 'END OF FILTER' instruction.

Some routing is noted in boxes above a question. This routing applies to large blocks of questions, and stops when the next 'box' of routing appears.

In the routing statements variables or questions will be referred to. If the question is from another module, then the question name will be prefixed by the module name. For instance, 'HHQRE.ADSA = 2' indicates that the question ADSA is in the module 'HHQRE' (the household questionnaire module). Additionally, if the routing uses 'feed forward' information from a prior interview, that variable will be referred to with the prefix 'FF'.

### *Textfills*

In some cases the text of a question may be varied to take account of particular circumstances by using a 'textfill'. These possible different wordings are indicated by '[' and end with ']'. When more than one possible textfill appears within a question, they are separated by '/'. The circumstances in which the text is varied is specified in footnotes. If twins or triplets names are used in a textfill the textfill will read as '[Child1 name] and [Child 2 name] and [Child3] name'.

### *Checks*

An advantage of CAPI questionnaires is that checks can be included in the program to alert interviewers to potential errors.

A number of checks have been included in the CAPI script. Checks to prevent logical inconsistencies have been included in the household and parent questionnaires. Additionally, where applicable, range checks have been included in both the household and parent questionnaires. These checks alert interviewers to when a value entered (for instance, the year when a respondent moved house) seems unlikely or inconsistent with previous answers, or prevents interviewers from entering a value that is impossible (for instance, a date of birth that is in the future).

### *Household Questionnaire*

The format for this section differs from the rest of the questionnaire. A revised version in a similar format will be produced in due course.

### *Income and house value information and unfolding brackets*

Some questions in MCS6 ask for specific income information or house value. If respondents are unable or refuse to give a specific amount, they are referred to a series of 'unfolding brackets'. Unfolding brackets are a series of follow-up questions designed to elicit a defined

band within which the true value falls. Unlike conventional brackets, respondents are not presented with a list of ranges to place themselves. Instead, respondents are asked to say whether they have more, less or about the same as a particular value, which is randomly allocated among a set range of values. This question is repeated using different values (which will be higher or lower depending on the answer to which period the amount covers). The procedure stops when either an upper or lower bound is provided, the respondent refuses or says 'don't know', or the respondent places themselves in the top bracket.

Each respondent is randomly assigned one of three starting points in the unfolding brackets questions so that any possible 'anchoring' effects (i.e. where people use the suggested figure as a reference point and make adjustments to it to reach their answer) from the procedure are averaged across the distribution, and the bracket values are selected on the basis of the distribution of the underlying financial variable.

### **Additional routing clarification for language (LANO to OLAW) and relationship history questions (RCPL to RPRM)**

#### **Household composition for current interview**

- Person numbers for main and partner are saved in FINM and FINP
- Only main in HH (FINM<>MISSING and FINP=MISSING) -> *lone parent household*
- Main and partner (can be proxy) in HH (FINM<>MISSING and FINP<>MISSING) -> *two-parent household*

#### **Household composition at last interview**

- Determine last sweep family participated from FFLSTS00 in Family-level FF
- Check eligibility status for people in HHGrid FF:
  - If FFLSTS00=1 then look at FFELI100
  - If FFLSTS00=2 then look at FFELI200
  - If FFLSTS00=3 then look at FFELI300
  - If FFLSTS00=4 then look at FFELI400
  - If FFLSTS00=5 then look at FFELI500
- If FFELI100/200/300/400/500=1 (main) save respective person number in LSTM (MISSING otherwise)
- If FFELI100/200/300/400/500=2 (partner) or 3 (proxy) save respective person number in LSTP (MISSING otherwise)
- Only main in HH (LSTM<>MISSING and LSTP=MISSING) -> *lone parent household*
- Main and partner (can be proxy) in HH (LSTM<>MISSING and LSTP<>MISSING) -> *two-parent household*
- No main in HH (LSTM=MISSING) -> *unknown*

#### **Number of parents who are the same for current and at last interview**

- Count number of parents who are still present:
  - If (LSTM=MISSING and LSTP=MISSING) then none the same
  - If (LSTM=MISSING and LSTP=FINM) then one the same
  - If (LSTM=FINM and LSTP=MISSING) then one the same
  - If (LSTM=MISSING and (LSTP=FINP and FINP<>MISSING)) then one the same
  - If ((LSTM=FINP and FINP<>MISSING) and LSTP=MISSING) then one the same
  - If (LSTM=FINM and LSTP=FINP and FINP<>MISSING) then two the same
  - If (LSTM=FINP and LSTP=FINM and FINP<>MISSING) then two the same
