Introduction

The British Election Study 2015 is managed via a consortium of the University of Manchester, The University of Oxford, and The University of Nottingham. The Scientific Leadership Team is comprised of Professors Ed Fieldhouse, Jane Green, Hermann Schmitt, Geoff Evans and Cees van der Eijk. The team is supported by researchers Dr Jon Mellon and Chris Prosser, and also by BES 2015 consultant Professor John Curtice (University of Strathclyde). The BES 2015 is working in close collaboration with colleagues within the Universities of Manchester, Oxford and Nottingham, and is partnering with a wide variety of affiliated datasets and projects (and proposed projects) to link BES voter data to other data on election candidates and campaigns.

Wave 5

In total 30,725 respondents took wave 5 of the British Election Study. 28,073 of these also took wave 4, an overall wave on wave retention rate of 89.6%. 17,673 respondents took all of the first five waves of the survey, 58.5% of respondents who originally took wave 1. Wave 5 was conducted by YouGov between 31st March 2015 and 6th May 2015.

Wave 4

31,328 respondents took wave 4 of the British Election Study. 23,542 of these also took wave 3. The overall wave on wave retention was 84.6%. There are 18,958 respondents who took all of the first four waves of the survey, 62.7% of respondents who originally took wave 1. Wave 4 was conducted by YouGov between 4th March 2015 and 30th March 2015.

Wave 3

27,839 respondents took wave 3 of the British Election Study, 24,016 of these also took wave 2. The overall wave on wave retention was 79.4%. In total there are 21,471 respondents who took all of the first three waves of the survey, 71.0% of the respondents who originally took wave 1. Wave 3 was conducted by YouGov between 19th September 2014 and 17th October 2014.

Wave 2

30,219 respondents took wave 2, 26,870 of these also took wave 1. The overall wave on wave retention was 88.9%. Wave 2 was conducted by YouGov between 22nd May 2014 and 25th June 2014.

Wave 1

A total of 30,590 respondents were interviewed by YouGov between 20th February 2014 and 9th March 2014 for wave 1 of the British Election Study.

Weights and samples

Around 30,000 respondents were interviewed in each wave (referred to as the full sample). However, we also define a smaller core sample of around 21,000 respondents in each wave that constitute a cross-sectional group which is more representative than the full sample (i.e. the range of weights is smaller than in the full sample). For cross-sectional work, where you wish to say something about the proportion of the population giving a certain response, we recommend using this core sample.

As before, we provide two cross-sectional weights for each wave, the full weight (e.g wt_full_W5) that covers all respondents who took the wave 5 survey and the core weight that weights a smaller more representative sample of respondents (wt_core_W5). The panel dataset includes a cumulative weight that covers respondents who have taken all waves so far in the study (wt_full_W1W2W3W4W5) as well as a pre-campaign to campaign weight (wt_full_W4W5).

All of these weights are constructed at the regional level (i.e. Scotland, England, Wales and London are weighted separately to population values) and then adjusted to account for the oversampling of Scottish and Welsh voters.

Country items

In addition to the core items, there are sets of questions written specifically for each of the nations included in this survey: England, Scotland and Wales (note that Northern Ireland is not included in this survey due to the very different political situation there).

The largest country specific section is in Scotland, where the BES includes items inquiring about many aspects of the Scottish referendum campaign and preferences about independence.

To allow for a comparison of different devolved situations, many of these questions are repeated in Wales.

Due to the size of the Scottish referendum module, two sets of core items are only asked to respondents in England and Wales:

- Party contact questions
- Perceptions of how united or divided the political parties are

The new wave 1 dataset replaces earlier versions that have been released through the BES website (older versions are available on request).

Top up items

Top up items are asked to all respondents in the first wave that they take part in. These are generally demographic and attitudinal variables that are believed to be fairly stable over time.

These include:

- Occupation
- Parent's occupation
- Country of birth
- Highest education level
- Left-right values

While some of these can change, they do not need to be asked in every wave. In addition to these variables, the BES also includes much of the information that YouGov routinely collects about all members of their panel.

- Age
- Highest qualification
- Home ownership

- Marital status
- Age left education (we already have highest qualification)
- Ethnicity
- Local authority and education authority
- Household income
- Personal income
- Household size
- Number of children in household
- Preferred daily newspaper
- Vote choice in 2010
- Religiosity
- Religious denomination
- Type of organization worked for
- Big 5 personality measures

Having these measures from YouGov's existing data leaves more space for other important questions on the rest of the survey and avoids asking respondents for information they've already provided in the past.

Playground items

The playground contains items that are only asked to subsets of respondents. Because of the number of questions asked to Scottish and Welsh respondents, these questions are only asked to English respondents. These questions are primarily suggested by the community of academic users. Additionally, some questions from the previous round of the British Election Study in 2010 are included in the playground for comparability. Finally, the playground includes a number of items that the BES team felt are useful to include in the survey but didn't need to be asked to all respondents in every wave.

Campaign Wave

The campaign wave (wave 5) was conducted as a 'rolling thunder' daily survey, with a subsample of respondents invited to complete the survey on each day of the election campaign. There are two variables which record which day of the campaign a respondent completed the survey – CampaignDayW5, which is the numeric day of the campaign period and enddateW5, which is a formatted date variable. There is also a daily weight variable (wt_daily_W5).

Due to a technical error the party contact questions were not asked of those respondents who took the survey during the first weeks of the campaign. It was asked of respondents who took the survey on and after April 24th.

Future releases

In order to allow the community to begin using the British Election Study data as soon as possible, we have released the data without some of the eventual features we intend to implement. These include:

- Manual coding for the most important issue question: the MII question is open ended. The BES team intends to work on a unified schema for the MII question in the new data as well to some

of the older surveys. In the meantime we have released automatic issue codings by using machine learning on the older surveys.

- Question orderings: the order of questions and rows was sometimes randomized within the survey. This information will be made available as a supplemental file in future.
- Question timings: the amount of time a respondent spent on each page was also recorded by YouGov, we also intend to make this available as a supplemental file in future.

In addition, the British Election Study data is currently in an early version so users are encouraged to check their variables carefully and report any problems they find.

Over the last year, it is estimated that the incomes of British taxpayers grew by an average of 2%. This means that for every £1000 in income that a person earned a year ago, they are now earning £1020 (after taking inflation into account).

Not everyone in Britain has seen their income grow by the same amount. The graph below shows how incomes have changed for people of different incomes.

The graph divides the population up into four groups based on income. Each group contains one quarter (25%) of the population. In the graph, we can see how much incomes have gone up or down for individuals in the poorest quarter, the lower-middle quarter, the upper-middle quarter, and the richest quarter of the population.
