

Millennium Cohort Study: Ofsted Teacher Survey Linkage

By Joe Heywood

This data set uses the MCS Age 7 sweep teacher survey with linked school-level data, including the Ofsted rating and date of Ofsted visit, school performance and some school characteristics. This data offers a suitable way to study behavioural responses to information on school quality, where school quality is revealed through an Ofsted inspection.

The data has been anonymized and linked by the Centre for Longitudinal Studies. The MCSID variable has been replaced with the randomized BR_MCS. Only data from MCS where the school of the cohort member was known and has data from the Ofsted file is included in this data set.
