

**Diet and Health Study 2014  
(P10041.08)**

**Editor's Code Sheet – Nurse CAPI**

**July 2014**

## Background

Public Health England (PHE) has commissioned The Diet and Health Study 2014, under the contract of the National Diet and Nutrition Study (P10041.08), to monitor progress towards the dietary target to reduce salt intake to approximately 6g per day. The study will be carried out in England and Scotland with adults, aged 19-64. Consumption of dietary sodium (or salt) is related to high blood pressure and cardiovascular disease. Sodium consumption can be assessed by measuring its levels in urine.

Individuals will be recruited by the Telephone Unit (TU) and details of those agreeing to take part will be passed onto nurses. Respondents will be asked to collect all urine passed during a 24-hour period.

Fieldwork will be carried out in six monthly waves: TU carry out recruitment in March – August. Nurse appointments will be carried out May - September. In that time we aim to collect usable urine samples from 600 adults.

## Factsheet

This document details the editing to be applied to CAPI questionnaires on the Diet and Health Study 2014. Problems should be referred to Laura and Katharine.

### General Points:

- A FACTSHEET is provided to aid editing of the CAPI questionnaires. It contains household information and information for each individual session. All questions which need to be coded are printed on the FACTSHEET. Coding decisions should be recorded alongside the appropriate questions or at the end of the FACTSHEET, if the question has not been printed.
- All soft checks that were triggered by the nurse and which have not been resolved will trigger again in the edit program. Where appropriate these should be investigated. If no editing action can be taken to resolve these checks, they should be cancelled by the editor.

Where problems arise that do not appear in these editing instructions, please contact the research team for advice.

Please record all information on the fact sheets including:

- The screen number of the question requiring coding
- The actual code given to each question that requires backcoding
- How a remark has been dealt with

Nurse CAPI

### Factsheet Definition for CAPI editing

The table below shows the variables that will appear on the factsheet for editing.

#### Household Qure

soc2010	Code as standard	Occupational coding
sic2007	Code as standard	Industry type coding
