Labour Force Survey User Guide – Volume 5: LFS Classifications
8.4 TRAVEL TO WORK AREAS

April 2006 ii

SECTION 1: BACKGROUND

INTERNATIONAL STANDARDS

The UK LFS adheres as closely as possible to the relevant international standards and definitions. The main international classifications are detailed in Section 2.

INDUSTRY CODES

The LFS industry details have been coded to 2 distinct set of definitions since the quarterly series was introduced in 1992. Initially everything was coded to SIC 80 (Standard Industrial Classification 1980), but as from Winter 1993/94 everything has been coded using SIC 92. Data for Autumn 1993 were coded using SIC 80, but a derived variable (DV) was created to allow conversion, at the single digit level only, to SIC 92. This DV has also been made available in all previous quarterly databases back to Spring 1992. As from Winter 1993/94 everything has been coded using SIC 92, but a DV has also been created to allow conversion back to SIC 80, again only at the 1 digit level. This DV is available in all databases from Winter 1993/94 onwards. These conversions DVs will allow users to make comparisons of how the change in coding affects the data. Further details of the transition are given in Section 3.

Since the SIC was first introduced in 1948, there have been a number of revisions: in 1958, 1968, 1980 and most recently 1992. These have been necessary to reflect the development of new industries and shifts in existing industries.

In addition to having coding for UK based industries, an international classification has also been introduced. In 1989 the Statistical Commission of the United Nations agreed upon the 'Industrial Classification of all Economic Activities' (ISIC), whilst on 9 October 1990, the European Communities' Internal Market Council (of Ministers) passed a regulation to introduce a new classification for the whole European Community (NACE Rev 1).

One of the principal reasons for the 1980 revision was to try to bring the SIC classifications as close as possible to those of NACE (Nomenclature générale des activités dans les Communautés Européennes). However, the first revision to NACE was made as an EC Regulation, which meant that EC countries were obliged to introduce a new SIC based on NACE Rev 1 - this revision became SIC(92); the two are identical at the 4 digit level and above and identical to ISIC rev. 3.

The full list of SIC 92 codes can be found in the GSS publication 'Standard Industrial Classification of economic activities 1992', published by HMSO, ISBN 0 11 620550 4.

OCCUPATION CODES

In 1990 the International Labour Office published the International Standard Classification of Occupations 1988 (ISCO 88), to replace ISCO 68.

Eurostat commissioned a team from the Institute for Employment Research, led by Professor Peter Elias, to produce a version of ISCO 88 suitable for use in European statistics. Each state of the European Union is required to provide Eurostat with counts from its Census of Population and Labour Force Survey based on this European variant of ISCO 88, ISCO 88 COM.

For the supply of counts to Eurostat, the UK's Standard Occupational Classification 1990 was mapped to ISCO 88 COM. Under the contract to revise the Standard Occupational Classification, the developers of SOC 2000 have produced a mapping of SOC 2000 to ISCO 88 COM.

SOCIO-ECONOMIC

In 2001, the National Statistics Socio-economic Classification (NS-SEC) was introduced for all official statistics and surveys. It replaced the two socio-economic classifications: Social Class based on Occupation (SC, formerly, Registrar General's Social Class) and Socio-economic Groups (SEG). The change was agreed by the National Statistician following a major review of government social classifications commissioned in 1994 by the Office of Population Censuses and Surveys (now the Office for National Statistics) and carried out by the Economic and Social Research Council. For full details of the Review and its conclusions see Rose and O'Reilly, 1997¹ and 1998²; Rose, O'Reilly and Martin, 1997³.

The final phase of the Review involved rebasing the NS-SEC on the Standard Occupational Classification 2000 which was published in June 2000. This resulted in some important changes to the NS-SEC from the interim version of NS-SEC previously published in Rose and O'Reilly, 1998.

ETHNICITY

The recommended output classification of ethnic groups from National Statistics data sources was changed in 2001 to be broadly in line with the 2001 Census. From Spring 2001, the Labour Force Survey (LFS) introduced new questions on ethnicity in line with this new classification.

The new output categories support varying degrees of comparability with the 2001 population censuses of the different countries of the UK (which differ in the categories used), allowing commensurate comparability at the Great Britain and UK levels. This change is described in more detail on the National Statistics website:

www.statistics.gov.uk/about/classifications/ns ethnic classification.asp

EDUCATION

ISCED is a system for classifying statistics on education in a way which is internationally comparable. ISCED is being revised to ISCED 97 as the current ISCED is out of date. Section 7 of this volume sets out how it is proposed that the ISCED 97 levels will translate to the main UK education programmes. The section also contains educational qualifications, as recorded on the LFS, and their NVQ equivalents, as well as a detailed breakdown of the coding of subject of degree.

GEOGRAPHICAL LEVELS

Section 8 contains the detailed coding for country of birth, country of work and nationality as used on the LFS, and explains the use of the derived variable EURBAN, which codes the population density of local authority districts in GB and electoral wards in Northern Ireland using 1991 Census population data. This section also contains details on the European classification of geographical areas and how they translate to LFS geographical areas.

SECTION 2: INTERNATIONAL STANDARDS

SUMMARY

The UK LFS adheres as closely as possible to the relevant international standards and definitions. This section of the LFS User Guide contains the text of the main international classifications:

The international standards currently at force concerning statistics of the economically active population, employment, unemployment and underemployment are still those in Resolution 1 of the 13th ICLS, 1982 - the full text of this is given at 2.1.

Two reports can be considered as supplements to the ICLS resolution. These are:

"Report of the Working Group on Implications of Employment Promotion Schemes on the Measures of Employment". Fourteenth International Conference of Labour Statisticians, Geneva, 28 October - 6 November 1987, International Labour Office, Report of the Conference, ICLS/14/D.14 - the full text is given at 2.2

"Recommendations of the Joint ILO/Czech Statistical Office Meeting on the statistical treatment of persons on extended types of leave in respect to the international definitions of employment and unemployment", ILO <u>Bulletin of Labour Statistics</u>, Geneva, 1996-1, pp. XXV-XXVI - *the text is shown at 2.3.*

In general, considerable attention has been paid to different classifications of those in employment, as paragraph 27 of 2.1 indicates.

- ICSE The International Classification of Status in Employment classifies jobs with respect to
 the type of explicit or implicit contract of employment the person has with other persons or
 organisations. The basic criteria to define groups of the classification are the type of economic
 risk and the type of authority over establishments and other workers which the job incumbent
 has or will have.
- ISCO International Standard of Occupation
- ISIC International Standard Industrial Classification

More detailed information about international standards and definitions are contained in "Surveys of economically active population, employment, unemployment and underemployment, an ILO manual on concepts and methods", ILO, Geneva, 1990.

2.1 RESOLUTION CONCERNING STATISTICS OF THE ECONOMICALLY ACTIVE POPULATION, EMPLOYMENT, UNEMPLOYMENT AND UNDEREMPLOYMENT, ADOPTED BY THE THIRTEENTH INTERNATIONAL CONFERENCE OF LABOUR STATISTICIANS (OCTOBER 1982)

The Thirteenth International Conference of Labour Statisticians.

Recalling the existing international standards concerning statistics of the labour force employment and unemployment contained in Resolution I adopted by the Eighth Conference (1954) and concerning measurement and analysis of underemployment and under-utilisation of manpower contained in Resolution III adopted by the Eleventh Conference (1966).

Recognising the need to revise and broaden the existing standards in order to enhance their usefulness in the provision of technical guidelines to all countries and particularly those with less developed statistics and recognising the usefulness of such standards in enhancing the international comparability of the statistics

Adopts this twenty-ninth day of October 1982 the following resolution in substitution for Resolution I of the Eighth Conference and paragraphs 4 to 9 and 13 of Resolution III of the Eleventh Conference:

Objectives and scope

- 1. Each country should aim at developing a comprehensive system of statistics on the economic activity of the population in order to provide an adequate statistical base for the various users of the statistics taking account of the specific national needs and circumstances. In particular the system should provide for needs in connection with the measurement of the extent of available and unused labour time and human resources for purposes of macro-economic monitoring and human resources development planning and the measurement of the relationships between employment income and other social and economic characteristics for purposes of formulating and monitoring employment policies and programmes, income-generating and maintenance schemes, vocational training and other similar programmes.
- 2. In order to fulfil the above objectives the programme of statistics of the economically active population should in principle cover all branches of economic activity, all sectors of the economy and all status groups (employees, own-account workers, etc.) and should be developed to the fullest extent possible in harmony with other economic and social statistics. The programme should specifically provide for both short-term and longer-term needs, i.e. statistics for current purposes compiled frequently on a recurrent basis and statistics compiled at longer intervals for structural indepth analysis and as bench-mark data:
 - (a) the current statistics programme should encompass statistics of the currently active population and its components in such a way that trends and seasonal variations can be adequately monitored. As a minimum programme, countries should collect and compile statistics on the currently active population twice a year, if possible coinciding with the agricultural peak and slack seasons wherever considered appropriate;
 - (b) the non-current statistics programme which may include censuses and surveys should provide (i) comprehensive data on the economically active population, (ii) in-depth statistics on the activity pattern of the economically active population over the year and the relationships between employment, income and other social and economic characteristics, and (iii) data on other particular topics (e.g. children and youth, women households) as determined by the long-term and continuing needs.
- 3. Population censuses and sample surveys of households or individuals generally constitute comprehensive means of collection of data on the economically active population which can be linked with data on other related topics. Establishment surveys and administrative records may also serve as sources for obtaining in some cases more precise, more frequent and more detailed statistics on particular components of the economically active population. The different sources of information should be regarded as complementary and may be used in combination for deriving where necessary integrated sets of statistics. In designing population censuses, surveys of households or individuals or other means of data collection on the economically active population, efforts should be made in so far as possible to incorporate the international standards.

4. In order to promote comparability of the statistics among countries where national concepts and definitions do not conform closely to the international standards, explanations should be given and the main aggregates should if possible be computed on the basis of both the national and the international standards. Alternatively, the necessary components should be identified and provided separately in order to permit conversion from the national to the international standards.

Concepts and definitions

The economically active population

- 5. The economically active population comprises all persons of either sex who furnish the supply of labour for the production of economic goods and services as defined by the United Nations systems of national accounts and balances during a specified time-reference period. According to these systems the production of economic goods and services includes all production and processing of primary products whether for the market, for barter or for own consumption, the production of all other goods and services for the market and, in the case of households which produce such goods and services for the market, the corresponding production for own consumption.
- 6. Two useful measures of the economically active population are the usually active population measured in relation to a long reference period such as a year and the currently active population or equivalently the "labour force" measured in relation to a short reference period such as one week or one day.

The usually active population

- 7. (a) The usually active population comprises all persons above a specified age whose main activity status as determined in terms of number of weeks or days during a long specified period (such as the preceding 12 months or the preceding calendar year) was employed or unemployed as defined in paragraphs 9 and 10.
 - (b) Where this concept is considered useful and feasible the usually active population may be subdivided as employed and unemployed in accordance with the main activity.

The labour force (the currently active population)

8. The labour force or "currently active population" comprises all persons who fulfil the requirements for inclusion among the employed or the unemployed as defined in paragraphs 9 and 10 below.

Employment

- 9. (1) The "employed" comprise all persons above a specified age who during a specified brief period, either one week or one day, were in the following categories:
 - (a) "paid employment":
 - (a1) "at work": persons who during the reference period performed some work for wage or salary, in cash or in kind;
 - (a2) "with a job but not at work": persons who, having already worked in their present job, were temporarily not at work during the reference period and had a formal attachment to their job.

This formal job attachment should be determined in the light of national circumstances, according to one or more of the following criteria:

- (i) the continued receipt of wage or salary;
- (ii) an assurance of return to work following the end of the contingency, or an agreement as to the date of return,

(iii) the elapsed duration of absence from the job which, wherever relevant, may be that duration for which workers can receive compensation benefits without obligations to accept other jobs;

(b) "self-employment":

- (b1) "at work": persons who during the reference period performed some work for profit or family gain, in cash or in kind;
- (b2) "with an enterprise but not at work": persons with an enterprise, which may be a business enterprise, a farm or a service undertaking, who were temporarily not at work during the reference period for any specific reason.
- (2) For operational purposes, the notion of "some work" may be interpreted as work for at least one hour.
- (3) Persons temporarily not at work because of illness or injury, holiday or vacation, strike or lockout, educational or training leave, maternity or parental leave, reduction in economic activity, temporary disorganisation or suspension of work due to such reasons as bad weather, mechanical or electrical breakdown, or shortage of raw materials or fuels, or other temporary absence with or without leave should be considered as in paid employment provided they had a formal job attachment.
- (4) Employers, own-account workers and members of producers' co-operatives should be considered as in self-employment and classified as "at work" or "not at work", as the case may be.
- (5) Unpaid family workers at work should be considered as in self-employment irrespective of the number of hours worked during the reference period. Countries which prefer for special reasons to set a minimum time criterion for the inclusion of unpaid family workers among the employed should identify and separately classify those who worked less than the prescribed time.
- (6) Persons engaged in the production of economic goods and services for own and household consumption should be considered as in self-employment if such production comprises, an, important contribution to the total consumption of the household.
- (7) Apprentices who received pay in cash or in kind should be considered in paid employment and classified as "at work" or "not at work" on the same basis as other persons in paid employment.
- (8) Students, homemakers and others mainly engaged in non-economic activities during the reference period, who at the same time were in paid employment or self-employment as defined in subparagraph (1) above should be considered as employed on the same basis as other categories of employed persons and be identified separately, where possible.
- (9) Members of the armed forces should be included among persons in paid employment. The armed forces should include both the regular and the temporary members as specified in the most recent revision of the International Standard Classification of Occupations (ISCO).

Unemployment

- 10. (1) The "unemployed" comprise all persons above a specified age who during the reference period were:
 - (a) "without work", i.e. were not in paid employment or self-employment as defined in paragraph 9;
 - (b) "currently available for work", i.e. were available for paid employment or selfemployment during the reference period; and
 - (c) "seeking work", i.e. had taken specific steps in a specified recent period to seek paid employment or self-employment. The specific steps may include registration at a public or private employment exchange; application to employers; checking at work sites, farms, factory gates, market or other assembly places; placing or answering newspaper

advertisements: seeking assistance of friends or relatives: looking for land, building, machinery or equipment to establish own enterprise; arranging for financial resources; applying for permits and licences, etc.

- (2) In situations where the conventional means of seeking work are of limited relevance, where the labour market is largely unorganised or of limited scope, where labour absorption is, at the time, inadequate or where the labour force is largely self-employed, the standard definition of unemployment given in subparagraph (1) above may be applied by relaxing the criterion of seeking work.
- (3) In the application of the criterion of current availability for work, especially in situations covered by subparagraph (2) above, appropriate tests should be developed to Suit national circumstances. Such tests may be based on notions such as present desire for work and previous work experience, willingness to take up work for wage or salary on locally prevailing terms, or readiness to undertake self-employment activity given the necessary, resources and facilities.
- (4) Notwithstanding the criterion of seeking work embodied in the standard definition of unemployment, persons without work and currently available for work who had made arrangements to take up paid employment or undertake self-employment activity at a date subsequent to the reference period should be considered as unemployed.
- (5) Persons temporarily absent from their jobs with no formal job attachment who were currently available for work and seeking work should be regarded as unemployed in accordance with the standard definition of unemployment. Countries may, however, depending on national circumstances and policies, prefer to relax the seeking work criterion in the case of persons temporarily laid off. In such cases, persons temporarily laid off who were not seeking work but classified as unemployed should be identified as a separate subcategory.
- (6) Students, homemakers and others mainly engaged in non-economic activities during the reference period who satisfy the criteria laid down in subparagraphs (1) and (2) above should be regarded as unemployed on the same basis as other categories of unemployed persons and be identified separately, where possible.

Population not economically active

11. The "population not economically active" comprises all persons, irrespective of age, including those below the age specified for measuring the economically active population who were not "economically active", as defined in paragraph 5.

The population not currently active

- 12. (1) The "population not currently active", or, equivalently, persons not in the labour force, comprises all persons who were not employed or unemployed during the brief reference period and hence not currently active because of (a) attendance at educational institutions, (b) engagement in household duties, (c) retirement or old age, or (d) other reasons such as infirmity or disablement, which may be specified.
 - (2) Countries adopting the standard definition of unemployment may identify persons not classified as unemployed who were available for work but not seeking work during the reference period and classify them separately under the population not currently active.

The population not usually active

13. (1) The "population not usually active" comprises all persons whose main activity status during the longer specified period was neither employed nor unemployed. It comprises the following functional categories: (a) students; (b) homemakers; (c) income recipients (pensioners, rentiers, etc.); and (d) others (recipients of public aid or private support, children not attending school, etc.) as defined by the United *Nations Principles and recommendations for population and housing censuses* (1980).

(2) Where necessary, separate functional subcategories may be introduced to identify (i) persons engaged in unpaid community and volunteer services and (ii) other persons engaged in marginal activities which fall outside the boundary of economic activities.

Underemployment

- 14. Underemployment exists when a person's employment is inadequate in relation to specified norms or alternative employment, account being taken of his or her occupational skill (training and working experience). Two principal forms of underemployment may be distinguished: visible and invisible.
- 15. (1) Visible underemployment is primarily a statistical concept directly measurable by labour force and other surveys, reflecting an insufficiency in the volume of employment. Invisible underemployment is primarily an analytical concept reflecting a misallocation of labour resources or a fundamental imbalance as between labour and other factors of production.
 - (2) Characteristic symptoms might be low income, underutilisation of skill. low productivity. Analytical studies of invisible underemployment should be directed to the examination and analysis of a wide variety of data, including income and skill levels (disguised underemployment) and productivity measures (potential underemployment).
- 16. For operational reasons, the statistical measurement of underemployment may be limited to visible underemployment.

Visible underemployment

- 17. Two elements of the measurement of visible underemployment should be distinguished:
 - (a) the number of persons visibly underemployed;
 - (b) the quantum of visible underemployment.

Persons visibly underemployed

- 18. (1) Persons visibly underemployed comprise all persons in paid or self-employment, whether at work or not at work, involuntarily working less than the normal duration of work determined for the activity, who were seeking or available for additional work during the reference period.
 - (2) For the purpose of classifying persons as visibly underemployed, normal duration of work for an activity should be determined in the light of national circumstances as reflected in national legislation to the extent it is applicable, and usual practices in other cases, or in terms of a uniform conventional norm.

Quantum of visible underemployment

- 19. (1) The quantum of visible underemployment may be measured by aggregating the time available for additional employment during the reference period in respect of each person visibly underemployed. The time available for additional employment may be computed in units of working days, half-days or hours as may be convenient in national circumstances, depending on the nature of data collected. It may be useful to measure separately the part of the quantum of visible underemployment that corresponds to "time lost" defined as the difference between hours usually employed and hours actually employed.
 - (2) Countries who wish to apply the criterion of seeking work for the measurement of the quantum of visible underemployment may do so by taking into account the duration of work sought.
- 20. A composite estimate of the quantum of current unemployment and visible underemployment may be compiled on the basis of the labour-time disposition of all persons in the labour force, by accounting for the total labour time potentially available for each person in the labour force in terms of time employed, time available for employment and time not available for employment during the reference period. It can be measured for simplicity either in units of working days or half-days, or, more fully, in hours where feasible.

Analytical concepts

- 21. Based on the concepts and definitions given in paragraphs 5 to 20 above, a variety of analytical concepts and measures can be derived. For instance:
 - (1) The economically active population may be divided into two broad segments: the armed forces and the economically active civilian population.
 - (2) The economically active population may be related to the total population for the derivation of a crude participation rate, or, more appropriately, to the population above the age prescribed for the measurement of the economically active population.
 - (3) The employed population may be related to the population above the specified age for the derivation of an employment-population ratio.
 - (4) The unemployed population may be related to the economically active population for the derivation of a general unemployment rate. Unemployment rates, relevant to paid employment on the one hand and self-employment on the other, may be derived, wherever considered useful and feasible.
 - (5) The number of persons visibly underemployed may be related to persons employed and the proportion may be studied separately for each branch of economic activity and each occupational group.
 - (6) A composite rate of unemployment and visible underemployment compiled as the ratio of unemployed labour time available for employment to the total labour time employed or available for employment. The rates, ratios and proportions suggested above may be compiled separately by sex in respect of specified age groups.
- 22. The technique of labour time disposition suggested in paragraph 20, if carried out through a series of current surveys covering a representative sample of reference periods spread over a year, can be used for the estimation of labour-time employed or unemployed over the year. The estimates may be expressed in terms of person-days or person-hours or, if so desired, converted into standard full-time person-years.

Employment and income relationships

- 23. In order to realise the objectives of analysis of the relationships between employment and income mentioned in paragraph 1, countries should develop programmes of data collection on employment and income that reveal related economic and social aspects. In particular, data should be compiled on employment, income from employment and household income for the purpose of (a) analysing the income-generating capacity of different economic activities and (b) identifying the number and characteristics of persons who are unable to maintain their economic well-being on the basis of the employment opportunities available to them.
- 24. (1) In order to obtain comprehensive measures of the relationships between employment and income, the measurements of employment, income from employment and household income should refer to the work experience of the population over a long reference period, preferably a year, taking into account not only the principal occupation but also any secondary occupations and other sources of income.
 - (2) Income from employment includes wages, salaries and other earnings in cash and kind of persons in paid employment and net entrepreneurial income of persons in self-employment.
 - (3) The concepts and definitions of income and its components are given in the resolutions concerning an integrated system of wages statistics and concerning household income and expenditure surveys adopted by the Twelfth Conference (1973) and in the United Nations *Provisional guidelines on statistics of the distribution of income, consumption and accumulation of households* (1977).

- (4) The statistics on employment and income should be analysed to the extent possible, in conjunction with duration of work, household size, number of earners, assets and other demographic, social and economic characteristics of the individual and the household.
- (5) The statistics on employment and income should be consistent with and, in so far as possible, be integrated into the framework of the statistics of the economically active population set forth in paragraphs 5 to 22 above.

Data collection, analysis and classifications

- 25. The International Labour Office should prepare a manual on statistics of the economically active population, employment, unemployment and underemployment detailing such aspects as methodology of data collection, tabulations and analysis.
- 26. (1) The analysis of the economically active population and the population not economically active should include classifications by significant demographic, social and economic characteristics as well as appropriate cross-classifications by two or more related characteristics.
 - (2) In particular, the population above the age specified for the measurement of the economically active population should be cross-classified by usual activity status (employed, unemployed, students, homemakers, etc.) and current activity status (employed, unemployed and not currently active).
- 27. For the purpose of international comparisons, the classifications of the statistics of the economically active population should adhere to or be convertible into the standard international classifications most recently adopted such as:
 - (a) International Standard Classification of Occupations (ISCO) ILO;
 - (b) International Standard Industrial Classification of All Economic Activities (ISIC) United Nations;
 - (c) international classification according to status (as employer. employee, etc.) definitions of status by the United Nations except that for the classification of unpaid family workers the minimum time criterion (at least one-third of the normal working hours) no longer need be applied
 - (d) Provisional Guidelines on Standard International Age Classifications United Nations.
- 28. For classifications according to other characteristics such as duration of work, duration of unemployment, the International Labour Office should develop appropriate international standard classifications taking into account the current national practices and needs.

Data on particular topics

- 29. In order to adequately study the transition phases from learning to earning activities and to develop appropriate policy measures where necessary. specific statistics should be obtained periodically on children and youth in relation to school attendance and their participation in economic activity. For this purpose, it may be necessary to collect additional data on children and youth below the specified minimum age limit adopted for measuring the economically active population.
- 30. (1) For the purpose of developing and monitoring programmes concerned with the participation of women in development and the promotion of equality between the sexes, an adequate statistical base on women's participation in economic activities is essential. In this respect, therefore, the statistics of the economically active population, employment, unemployment, underemployment and related topics should be compiled separately for males and for females.
 - (2) Further, in order to obtain more accurate statistics on women's participation in economic activities, measurement methods should be carefully reviewed to ensure unbiased coverage of men and women. Sex biases in the form of underestimation of women's participation in economic activity may result, for example, from incomplete coverage of unpaid economic activities, failure of

respondents and enumerators to take account of women's multiple activities and use of proxy respondents. Where necessary, research should be carried out in order to identify the extent, nature and sources of the possible biases, if any, and to develop appropriate methods of reducing them.

- 31. Since the participation in economic activity of individuals often depends on the circumstances of other members of the family or household and in many countries, particularly in rural areas of developing countries, economic activity is largely organised on a family or household basis, statistics on economically active population, employment, unemployment, underemployment and related topics should be supplemented periodically by statistics on families and households: for example, identifying the unemployed in terms of their relationship to other members of the household or family, presence of other working members of the household or family, number of children in the household or family, as well as identifying households and families in terms of number of members unemployed, sex and other characteristics of the primary earner in the household or family, etc.
- 32. In order to provide improved and more detailed information on employment, unemployment and underemployment and for other purposes such as identifying multiple activities and marginal activities, attempts should be made to collect periodically statistics on time-use.
- 33. In order to account for the informal sector activities both in developed and developing countries and the rural non-agricultural activities generally carried out by households in conjunction with agricultural activities in developing countries, and given the scarcity of statistics on these topics, it is desirable that countries develop appropriate methodologies and data collection programmes on the urban informal sector and the rural non-agricultural activities. In particular, suitable definitions and classifications should be developed in order to identify and classify the economically active population in the urban informal sector and those engaged in the rural non-agricultural activities.
- 34. In order to provide adequate employment opportunities and means of livelihood for the disabled and other handicapped persons, statistics should be collected and compiled using appropriate methodologies on the size of this population and its distribution according to relevant social and economic characteristics distinguishing, in particular those employed, those unemployed and those inactive.
- 35. (1) It is recommended that in countries with a planned economy, extensive use should be made of the balance sheet of labour resources so as to identify the size and structure of the labour force and its geographical distribution by type of employment and sector of the national economy.
 - (2) The population of working age, with the exception of the disabled who do not work, and also the population not of working age, are included as labour resources. The balance sheet of labour resources may be broken down separately according to sex, identifying persons employed in subsidiary farming and in housework, disabled persons of working age but who do not work and persons not of working- age.
 - (3) The data in the balance sheets make it possible to identify the proportion of labour resources which may be utilised in the future to work in national production.
- 36. It is suggested that countries consider collecting information on the population not economically active, taken account of national needs and circumstances, to assist governments in designing their human resources and development policies. Countries should develop classifications designed to permit cross-tabulations reflecting the relative strength of attachment to the labour market of the groups identified in paragraphs 12 (1) and 13 (1) above.

Evaluation and dissemination

37. Like any other set of data, statistics of the economically active Population, employment, unemployment, underemployment and related topics are subject to errors. While the data collection programme should be carefully designed to minimise possible errors, some are bound to occur. A careful interpretation of the results, therefore, requires some knowledge about the quality of the data. An evaluation of data quality is also necessary to improve upon data collection, processing

and estimation procedures in subsequent rounds of the programme. The evaluation procedure should as far as possible form part of the data collection programme itself.

- 38. Statistics of the economically active population, employment, unemployment, underemployment and related topics should be issued promptly and made widely available. The statistics may be issued in stages by means of preliminary reports as soon as the main aggregates are available, followed by one or more final reports giving the revised and detailed statistics, in tabular form and, to the extent possible and permissible, in machine readable form.
- 39. Every release of statistics of the economically active population, employment, unemployment, underemployment and related topics, whether recurring or single-time, should clearly indicate the nature of the data and make reference to any detailed technical descriptions. In particular, descriptions should be given of the scope and coverage, the concepts and definitions, the method of data collection, the sample size and design where sampling is used, the methods of estimation and adjustments, including seasonal adjustments where applied, measures of data quality, including sampling and non-sampling errors where possible, as well as descriptions of changes in historical series, deviations from international standards and relationships with other sources of similar data and related bodies of statistics.

2.2 REPORT OF THE WORKING GROUP ON IMPLICATIONS OF EMPLOYMENT PROMOTION SCHEMES ON THE MEASUREMENT OF EMPLOYMENT AND UNEMPLOYMENT

- 1. The following 34 countries were represented on the Working Group: Angola, Austria, Belgium, Bulgaria, Cote d'Ivoire, Cyprus, Denmark, Finland, France, Federal Republic of Germany, Ghana, Greece, Honduras, Ireland, Israel, Japan, Kenya, Libyan Arab Jamahiriya, Luxembourg, Mexico, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Tunisia, Uganda, United Kingdom, United Republic of Tanzania, United States of America, Union of Soviet Socialist Republics, Venezuela and Zimbabwe.
- 2. Representatives of the Employers' group nominated by the ILO Governing Body, the Statistical Office of the European Communities (EUROSTAT), the Organisation for Economic Co-operation and Development (OECD) and the United Nations Research Institute for Social Development (UNRISD) also attended.
- 3. The Working Group elected Mr. Lothar Herberger (Federal Republic of Germany) as Chairman.
- 4. The discussion of the Conference was based on Chapter 4 of Report I General Report: "Implications of Employment Promotion Schemes on the Measurement of Employment and Unemployment". In introducing the topic, the Assistant Secretary-General briefly described the background of the study and the content of Chapter 4, noting that it built on studies carried out by EUROSTAT for its 12 member countries and by the ILO for four additional countries (Australia, Finland, Sweden and the United States). The Working Group noted that Chapter 4 of the General Report provided an excellent basis for the discussion of the Group.
- 5. It was recognised that, in general, employment promotion schemes influenced the statistics of employment and unemployment. As the schemes differed widely from country to country, their influence should be analysed in order to improve international comparability. In countries where it was deemed necessary, such analyses would enable the calculation of different employment and unemployment figures, depending on the alternative classifications of persons in the various employment promotion schemes.
- 6. The main discussion of the Working Group focused on the statistical issues arising out of the development of employment promotion schemes in relation to the application of the international standards laid down in Resolution I adopted by the Thirteenth International Conference of Labour Statisticians in 1982. It was noted that some of the schemes generated particular forms of employment and intermediate situations that were on the borderlines of employment, unemployment and economic inactivity. It was recognised that many of the statistical issues involved were relevant, not only to registered unemployment statistics derived from administrative sources, but also to employment and unemployment statistics obtained from household surveys or establishment surveys.
- 7. There was general agreement that the definitions of employment and unemployment adopted by the Thirteenth International Conference of Labour Statisticians (1982) did not at present require revision for the purpose of classifying the participants in the employment promotion schemes described in Chapter IV into the major categories: employed, unemployed, not in the labour force. It was, however, felt that the application of those standards in particular circumstances could usefully be elaborated.
- 8. In this context it was stressed that according to the international definition of employment, being "at work" meant having contributed to the production of goods and services as defined by national accounting, in exchange for a wage or salary, in cash or in kind, for at least one hour during the reference period (one week or one day).
- 9. The "one hour of work" criterion of the international definition of employment was carefully examined and there was unanimous agreement that this criterion should not be changed, as it would destroy the basic structure of the labour force framework embedded in the international standards on statistics of employment and unemployment and it would lead to inconsistencies with the United Nations System of National Accounts and standards concerning other related bodies of

statistics. It was emphasised however that the employment data should be classified by hours of work and that countries should make further use of the concept of visible underemployment as already recommended by the international standards.

- 10. With respect to the statistical treatment of participants in job-training schemes, it was generally agreed that:
 - (a) when training took place within the context of the enterprise, it could be assumed that participants, like apprentices, were associated with the production of goods and services of the enterprise, at least for an hour during the reference period (one week or one day), and in that case the participants should be considered as "at work" and classified as employed, whether the employer or another entity paid the wage or salary;
 - (b) when training did not take place within the context of the enterprise (e.g., training took place outside the enterprise, or inside the enterprise but without association with the production activity of the enterprise), the statistical treatment would depend on whether or not the participant was employed by the enterprise before the training period (including cases classified as employed under (a) above):
 - (i) if employed by the enterprise before the training period, the participant should continue to be considered as employed while on training if he or she maintained a "formal job attachment", as set forth in the international definition of employment in paragraph 9(I)(a2) of Resolution I of the Thirteenth International Conference of Labour Statisticians.

In this context, to establish whether or not "formal job attachment" exists, the criterion of "assurance of return to work" should be considered to be the essential one. "Assurance of return to work" should be interpreted as assurance to return to work with the same employer.

In situations where such assurance to return to work did not exist, "formal job attachment" should be assessed on the basis of the criterion of "continued receipt of wage or salary". That criterion should be considered as satisfied if the employer paid directly all or a significant part of the wage or salary.

The third criterion, "elapsed duration of absence" might also be used in particular situations, e.g. in connection with long-term training schemes;

- (ii) if the participant was not employed by the enterprise before the training period, the participant could not be considered as "with a job but not at work" and the notion of "formal job attachment" would not apply. Consequently, if the scheme provided a definite commitment to employment at the end of training, the statistical treatment might follow that of persons who had made arrangements to take up employment at a date subsequent to the reference period (see paragraph 10(4) of Resolution I of the Thirteenth International Conference of Labour Statisticians).
- 11. Regarding the "seeking work" criterion of the international definition of unemployment, it was agreed that the example of "registration at a public or private employment exchange" need not be reformulated but should, in general, be interpreted as follows: registration should be considered as an active step to seek work only when it was for the purpose of obtaining a job offer from the employment exchange. This precision was particularly important where participation in an employment promotion scheme was linked to registration. Consequently, where registration was simply an administrative requirement for benefiting from the provision of a scheme and not for the purpose of obtaining a job offer, the act of registration should not be considered as an active step to seek work in the sense of the international definition of unemployment.
- 12. The issue concerning the distinction between seeking self-employment and the self-employment activity itself was examined in the light of the schemes providing assistance to unemployed persons wishing to set up an enterprise. It was suggested that this distinction be based on the point when the enterprise started to exist, e.g., when the enterprise was registered. In situations and in countries where enterprises were not necessarily required formally to re-register in order to

operate, it was suggested that the dividing line might be at the point when the first order was received or when the final resources became available or when the necessary infrastructure was in place. While noting these suggestions, the Working Group decided that the present formulation of the "seeking work" criterion of time international standards did not require further specification in this respect.

- 13. The relevance of the concept of "visible" employment of the international standards was examined in relation to the employment situation of participants in certain categories of employment promotion schemes. There was agreement that the concept might indeed be useful in this context, but that it needed to be further elaborated, possibly as part of the work of a future International Conference of Labour Statisticians. Some concerns were, however, expressed as to the practical difficulties of joint measurement of visible underemployment and participation in employment promotion schemes. Visible underemployment was only measurable through household surveys. Enumeration of participants in employment promotion schemes was often best made using administrative sources.
- 14. The French practice of establishing annually an employment-training balance sheet of young persons (see table 4.2 of Chapter 4 of the General Report) was considered to be a useful approach for supplementing labour force statistics with data on participation in employment promotion schemes derived from administrative sources. It was recognised that the drawing up of such balance sheets was not without practical difficulties. Notwithstanding these difficulties, it was suggested that the ILO might wish to recommend to countries concerned the drawing up of such balance sheets on a regular basis for young persons as well as for other age groups, so as to cover the whole working-age population, whenever possible.
- 15. It was noted that such balance sheets might in fact have wider applications and might be useful to countries in all parts of the world as a means of combining labour force statistics at the aggregate level with related statistics from different sources. Several examples were given concerning volunteer workers, unpaid apprentices, agriculture and construction workers in government-sponsored employment schemes.
- 16. The Working Group also considered it desirable for the ILO to extend the study on employment promotion schemes to cover countries in other parts of the world, provided the necessary resources were available.

2.3 RECOMMENDATIONS OF THE JOINT ILO/CZECH STATISTICAL OFFICE MEETING ON THE STATISTICAL TREATMENT OF PERSONS ON EXTENDED TYPES OF LEAVE IN RESPECT TO THE INTERNATIONAL DEFINITIONS OF EMPLOYMENT AND UNEMPLOYMENT (PRAGUE, 15-17 NOVEMBER 1995)

The international standards on employment and unemployment statistics are embodied in Resolution I concerning statistics of the economically active population, employment, unemployment and underemployment, adopted by the Thirteenth International Conference of Labour Statisticians (October 1982), and reproduced in the Bulletin of Labour Statistics, 1983-3 (pp. XI-XV).

Countries in transition to a market economy are increasingly using these standards in their efforts to set up a system of statistics on employment and unemployment which can be compared internationally.

At the ECE/ILO/OECD Work Session on Labour Statistics and Issues of Concern for Transition Countries (Paris, 17-18 December 1992), the ILO agreed to examine certain issues of common concern for which no explicit provision could be found in the relevant 1982 standards, in particular, the statistical treatment of persons on extended types of leave such as (a) maternity and parental leave, (b) leave initiated by the employer or administration or by the employee; and (c) educational or training leave.

In order to review the above issues, the ILO convened jointly with the Czech Statistical Office a meeting in Prague from 15 to 17 November 1995. The meeting was attended by 29 specialists from the following 18 transition countries: Armenia, Azerbaijan, Belarus, Bulgaria, Croatia, Czech Republic, Estonia, Hungary, Kyrgyzstan, Latvia, Lithuania, the Former Yugoslav Republic of Macedonia, Poland, Romania, Russian Federation, Slovakia, Slovenia and Ukraine. Experts from the United Kingdom, the OECD and the ILO also participated in the meeting. Three papers were prepared on the statistical treatment of persons on various types of extended leave, respectively, by Farhad Mehran (ILO Bureau of Statistics), Ralf Hussmanns (ILO Bureau of Statistics) and Jaroslav Kux (ILO Consultant), and discussed at the meeting.

The recommendations of this meeting are presented below.

As these issues are of concern to a number of other countries, it is envisaged to complement the abovementioned papers with studies concerning countries not covered here, and to submit the results for by other international forums, before eventual submission to the Sixteenth International Conference of Labour Statisticians, planned to be held in Geneva in 1998.

Persons on maternity and parental leave

Maternity leave

- 1. (1) Women on maternity leave who have an assurance of a return to work following the end of the leave, and who, during the reference period, were in receipt of all or part of their wage or salary from the employer or an equivalent payment from other sources received by virtue of being an employee, should be considered as in employment for the compulsory period of the leave stipulated by national legislation to ensure that mothers before and after childbirth have sufficient rest, or for a period to be specified according to national circumstances (e.g. one to six months).
 - (2) In countries where women on maternity leave are not classified as employed according to paragraph 1. (1), they should be classified as unemployed like other categories of non-employed persons, if they were available for work during the reference period and actively seeking work during a recent period. Women on maternity leave who do not satisfy the criteria of the definition of unemployment should be classified as not economically active.

Parental leave

- 2. (1) Women or men on parental leave should be considered as having a formal job attachment and, therefore, be classified as employed, if the duration of the leave is fairly short (e.g. one to three months) and immediately preceded by a period of employment, and if the person has an assurance of a return to work following the end of the leave. A period of maternity leave according to paragraph 1. (1) above is to be considered as a period of employment.
 - (2) Similar to the case of maternity leave, persons on parental leave who are not classified as employed, and who were available for work during the reference period and actively seeking work

during a recent period, should be classified as unemployed like other categories of non-employed persons. Persons on parental leave who do not satisfy the criteria of the definition of unemployment should be classified as not economically active.

Persons on leave initiated by the employer or administration or by the employee

Unpaid leave initiated by the employee

3. Employees on unpaid leave initiated by themselves should be classified as employed, if they have an assurance of a return to work with the same employer, and if the elapsed duration of the leave does not exceed short time-limit (e.g. one to three months) to be specified according to national circumstances. Otherwise, they should be classified as unemployed or not economically active, depending upon their current availability for work and recent job search activity.

Paid leave initiated by the employer or administration

4. Persons on paid leave initiated by the employer or administration should be classified as employed, if they have an assurance of a return to work with the same employer, and if the employer or administration pays all or a significant part of the wage or salary of the person on leave. Otherwise, such persons should be classified as unemployed or not economically active, depending upon their current availability for work and recent job search activity.

Unpaid leave initiated by the employer or administration

- 5. (1) Persons on unpaid leave initiated by the employer or administration (including leave paid out of the government budget or social security funds) should be classified into labour force categories as follows:
 - (a) Persons having an agreed date for return to work should be considered employed if the elapsed duration of their leave falls within a short time-limit (e.g. one to three months) to be specified according to national circumstances. Such persons may be classified as a separate category among employed persons; they should be included among the underemployed if they satisfy the criteria of the definition of underemployment.
 - (b) Persons who have an agreed date for return to work but whose elapsed duration of leave is longer than the specified short time-limit, as well as persons who have no agreed date for return to work but who are expecting to return to their work in the near future, should be considered unemployed like other categories of non-employed persons, if they are currently available for work and have recently sought work. Such persons should also be considered unemployed if they are currently available for work but have not recently sought work for either of the following two reasons: (i) they expect to be recalled to work with their former employer; (ii) they have already found a new job. They should be considered not economically active if they have not recently sought work for other reasons or if they are not currently available for work.
 - (c) Persons who neither have an agreed date for return to work nor expect to be recalled to their work in the near future should be considered unemployed like other categories of non-employed persons if they are currently available for work and have recently sought work. They should be considered not economically active if they are not currently available for work or if they have not recently sought work.
 - (2) The notion of expectation of returning to work "in the near future' should be specified in the light of the national circumstances and economic situation of each country, such as one to three months.

Persons on educational or training leave

- 6. (1) Persons temporarily not at work on paid educational or training leave should be classified as employed provided they have an assurance of a return to work, and if the employer or administration pays all or a significant part of the wage or salary of the person on leave.
 - (2) Persons temporarily not at work on unpaid educational or training leave of a short duration (e.g. one to three months) to be specified according to national circumstances should be classified as employed provided they have an assurance of a return to work.
 - (3) Other persons not at work on educational or training leave should be classified as unemployed or not economically active depending upon their current availability for work and recent job search activity.

2.4 INTERNATIONAL CLASSIFICATION OF STATUS IN EMPLOYMENT (ISCE)

The various employment status categories identified in the LFS are in line with the International Classification of Status in Employment (ISCE). This classification is agreed by International Conferences of Labour Statisticians and is promulgated by the United Nations Statistical Commission. A copy of the resolution setting out the latest ISCE-93, which was agreed by the 15th International Conference of Labour Statisticians (ICLS) (held in Geneva in January 1993) is set out below.

RESOLUTION III

Resolution concerning the International
Classification of Status in Employment (ICSE)

The Fifteenth International Conference of Labour Statisticians,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met from 19 to 28 January 1993,

Recalling the resolution concerning an international standard classification according to industrial status adopted by the Seventh International Conference of Labour Statisticians (1949) and the conclusions regarding the International Classification according to Status reached by the Ninth International Conference of Labour Statisticians (1957),

Considering the supplementary recommendations for Housing and Population Censuses adopted by the twenty-fourth session of the United Nations Statistical Commission (1987),

Considering the development in the world of work and recognising the diversity in the work situation of workers, there is currently a need for adapting the technical guidelines provided by the International Classification of Status in Employment as a basis for strengthening national statistical programmes and enhancing international comparability of statistics,

Recognising that, on the basis of experience gained in applying the present classification, further thought should be given to the conceptual basis of the ICSE and the relevance of the groups and subgroups proposed hereafter be verified in operational terms, and

Noting that such work could result in improvements leading to a revision of the present resolution at the next International Conference of Labour Statisticians; Adopts, this 28th day of January 1993, the following resolution:

I. THE NAME AND CONCEPTUAL BASIS FOR THE CLASSIFICATION

- 1. The classification of status in employment as shown in section II of this resolution is designated the International Classification of Status in Employment (ICSE-93). The group definitions are given in section III, while the statistical treatment of particular groups is specified in section IV.
- 2. The ICSE classifies jobs held by persons at a point in time. A job is classified with respect to the type of explicit or implicit contract of employment of the person with other persons or organisations. The basic criteria used to define the groups of the classification are the type of economic risk, an element of which is the strength of the attachment between the person and the job, and the type of authority over establishments and other workers which the job incumbents have or will have.
- 3. The ICSE-93 classifies persons by virtue of their actual and potential relations with jobs according to the rules set out in section V.

II. THE ICSE-93 GROUPS1

- 4. The ICSE-93 consists of the following groups, which are defined in section III:
 - 1. employees; among whom countries may need and be able to distinguish "employees with stable contracts" (including "regular employees");
 - 2. employers;
 - 3. own-account workers;
 - members of producers' co-operatives;
 - 5. contributing family workers;
 - 6. workers not classifiable by status.

III. GROUP DEFINITIONS

- 5. The groups in the ICSE-93 are defined with reference to the distinction between "paid employment" jobs on the one side and "self-employment" jobs on the other. Groups are defined with reference to one or more aspects of the economic risk and/or the type of authority which the explicit or implicit employment contract gives the incumbents or to which it subjects them.
- 6. Paid employment jobs are those jobs where the incumbents hold explicit (written or oral) or implicit employment contracts which give them a basic remuneration which is not directly dependent upon the revenue of the unit for which they work (this unit can be a corporation, a non-profit institution, a government unit or a household). Some or all of the tools, capital equipment, information systems and/or premises used by the incumbents may be owned by others, and the incumbents may work under direct super-vision of, or according to strict guidelines set by the owner(s) or persons in the owners' employment. (Persons in "paid employment jobs" are typically remunerated by wages and salaries, but may be paid by commission from sales, by piece-rates, bonuses or in-kind payments such as food, housing or training.)
- 7. Self-employment jobs are those jobs where the remuneration is directly dependent upon the profits (or the potential for profits) derived from the goods and services produced (where own consumption is considered to be part of profits). The incumbents make the operational decisions affecting the enterprise, or delegate such decisions while retaining responsibility for the welfare of the enterprise. (In this context "enterprise" includes one-person operations.)
- 8. 1. Employees are all those workers who hold the type of job defined as "paid employment jobs" (cf. paragraph 6). Employees with stable contracts are those "employees" who have had, and continue to have, an explicit (written or oral) or implicit contract of employment, or a succession of such contracts, with the same employer on a continuous basis. "On a continuous basis" implies a period of employment which is longer than a specified minimum determined according to national circumstances. (If interruptions are allowed in this minimum period, their maximum duration should also be determined according to national circumstances.) Regular employees are those "employees with stable contracts" for whom the employing organisation is responsible for payment of relevant taxes and social security contributions and/or where the contractual relationship is subject to national labour legislation.
- 9. 2. <u>Employers</u> are those workers who, working on their own account or with one or a few partners, hold the type of job defined as a "self-employment job" (cf. paragraph 7), and, in this capacity, on a continuous basis (including the reference period) have engaged one or more persons to work

¹For linguistic convenience the group titles and definitions have been formulated in a way which corresponds to the situation where each person holds only one job during the reference period. Rules for classifying persons with two or more jobs are given in section V.

April 2006

for them in their business as "employee(s)" (cf. paragraph 8). The meaning of "engage on a continuous basis" is to be determined by national circumstances, in a way which is consistent with the definition of "employees with stable contracts" (cf. paragraph 8). (The partners may or may not be members of the same family or household.)

- 10. 3. <u>Own-account workers</u> are those workers who, working on their own account or with one or more partners, hold the type of job defined as a "self-employment job" (cf. paragraph 7), and have not engaged on a continuous basis any "employees" (cf. paragraph 8) to work for them during the reference period. It should be noted that during the reference period the members of this group may have engaged "employees", provided that this is on a non-continuous basis. (The partners may or may not be members of the same family or household.)
- 11. 4. Members of producers' co-operatives are workers who hold a "self-employment" job (cf. paragraph 7) in a co-operative producing goods and services, in which each member takes part on an equal footing with other members in determining the organisation of production, sales and/or other work of the establishment, the investments and the distribution of the proceeds of the establishment amongst their members. (It should be noted that employees (cf. paragraph 8) of producers' co-operatives are not to be classified to this group.)
- 12. 5. Contributing family workers are those workers who hold a "self-employment" job (cf. paragraph 7) in a market-oriented establishment operated by a related person living in the same household, who cannot be regarded as a partner, because their degree of commitment to the operation of the establishment, in terms of working time or other factors to be determined by national circumstances, is not at a level comparable to that of the head of the establishment. (Where it is customary for young persons, in particular, to work without pay in an economic enterprise operated by a related person who does not live in the same household, the requirement of "living in the same household" may be eliminated.)
- 13. 6. Workers not classifiable by status include those for whom insufficient relevant information is available, and/or who cannot be included in any of the preceding categories.

IV. STATISTICAL TREATMENT OF PARTICULAR GROUPS

- 14. This section outlines a possible statistical treatment of particular groups of workers. Some of the groups represent subcategories or disaggregations of one of the specific ICSE-93 categories. Others may cut across two or more of these categories. Countries may need and be able to distinguish one or more of the groups, in particular group (a), and may also create other groups according to national requirements:
 - (a) Owner-managers of incorporated enterprises are workers who hold a job in an incorporated enterprise, in which they: (a) alone, or together with other members of their families or one or a few partners, hold controlling ownership of the enterprise; and (b) have the authority to act on its behalf as regards contracts with other organisations and the hiring and dismissal of persons in "paid employment" with the same organisation, subject only to national legislation regulating such matters and the rules established by the elected or appointed board of the organisation. Different users of labour market, economic and social statistics may have different views on whether these workers are best classified as in "paid employment" (cf. paragraph 6) or as in "self-employment" (cf. paragraph 7), because these workers receive part of their remuneration in a way similar to persons in "paid employment" while their authority in and responsibility for the enterprise corresponds more to persons in "self-employment", and in particular to employers. (Note, for example, that to classify them as employees will be consistent with their classification in the "System of National Accounts", while they may be best classified as employers or "own-account workers" for labour market analysis.) Countries should, therefore, according to the needs of users of their statistics and their data collection possibilities, endeavour to identify this group separately. This will also facilitate international comparisons.
 - (b) Regular employees with fixed-term contracts are "regular employees" (cf. paragraph 8) whose contract of employment specifies a particular date of termination.

- (c) Regular employees with Contracts without limits of time are "regular employees" (cf. paragraph 8) who have contracts which only can be terminated for specified causes such as incompetence, serious misconduct, or for economic reasons according to national legislation or custom.
- (d) <u>Workers in precarious employment</u> can either: (a) be workers whose contract of employment leads to the classification of the incumbent as belonging to the groups of "casual workers" (cf. item (e)), "short-term workers" (cf. item (f)) or "seasonal workers" (cf. item (g)); or (b) be workers whose contract of employment will allow the employing enterprise or person to terminate the contract at short notice and/or at will, the specific circumstances to be determined by national legislation and custom.
- (e) <u>Casual workers</u> are workers who have an explicit or implicit contract of employment which is not expected to continue for more than a short period, whose duration is to be determined by national circumstances. These workers may be classified as being "employees" (cf. paragraph 8) or "own-account workers" (cf. paragraph 10) according to the specific characteristics of the employment contract.
- (f) <u>Workers in short-term employment</u> are workers who hold explicit or implicit contracts of employment (cf. paragraph 6) which are expected to last longer than the period used to define "casual workers" (cf. item (e)), but shorter than the one used to define "regular employees" (cf. paragraph 8). These workers may be classified as "employees" (cf. paragraph 8) or "own-account workers" (cf. paragraph 10) according to the specific characteristics of the employment contract.
- (g) <u>Workers in seasonal employment</u> are workers who hold explicit or implicit contracts of employment where the timing and duration of the contract is significantly influenced by seasonal factors such as the climatic cycle, public holidays and/or agricultural harvests. These workers may be classified as "employees" (cf. paragraph 8) or "own-account workers" (cf. paragraph 10) according to the specific characteristics of the employment contract.
- (h) <u>Outworkers</u> are workers who: (a) hold explicit or implicit contracts of employment under which they agree to work for a particular enterprise, or to supply a certain quantity of goods or services to a particular enterprise, by prior arrangement or contract with that enterprise; but (b) whose place of work is not within any of the establishments which make up that enterprise. These workers may be classified as being in "paid employment" (cf. paragraph 6) or in "self-employment" (cf. paragraph 7) according to the specific terms of their contract. They may be classified as "employers" if they engage other workers on terms as described in paragraph 10.
- (i) <u>Contractors</u> are workers who: (a) have registered with the tax authorities (and/or other relevant bodies) as a separate business unit responsible for the relevant forms of taxes, and/or who have made arrangements so that their employing organisation is not responsible for relevant social security payments, and/or the contractual relationship is not subject to national labour legislation applicable to e.g. "regular employees" (cf. paragraph 9); but who (b) hold explicit or implicit contracts which correspond to those of "paid employment". These workers may be classified as in a "self-employment" job (cf. paragraph 7) or as in a "paid employment" job (cf. paragraph 6) according to national circumstances.
- (j) Workers who hold explicit or implicit contracts of "paid employment" (cf. paragraph 6) from one organisation, but who work at the site of and/or under instructions from a second organisation which pays the first organisation a fee for their services, may be classified separately from other "employees", and according to whether the primary organisation is a temporary work agency or another type of enterprise.
- (k) <u>Work gang (crew) members</u> are workers who are members of a group of workers who have been engaged as a group on terms corresponding to those of "paid employment" and where the employing organisation has entered into a contract only with the crew leader or with an organising agent for the crew, and not with the individual worker.

- (I) Countries may need and be able to classify separately workers participating in public or private employment promotion or job training schemes on terms of employment which correspond to "paid employment" jobs. This group of workers may be designated employment promotion employees. Workers who receive support from such schemes to establish their own business should be classified as being in a "self-employment" job (cf. paragraph 7) as "employer" (cf. paragraph 9) or "own-account worker" (cf. paragraph 10) as appropriate.
- (m) According to national circumstances countries may decide to classify as <u>apprentices</u> or <u>trainees</u>, workers who hold explicit or implicit contracts of "paid employment" which specify that all or part of their remuneration should be in the form of training for a trade or profession. When identifying apprentice and trainee employees separately, countries may also need and be able to distinguish between those who hold a formal training contract and follow a formal programme combining work experience with practical and theoretical instruction, and those who do not.
- (n) <u>Employers of regular employees</u> are those "employers" who during the reference period have engaged at least one person to work for them in their business on explicit or implicit terms such that this person will be classified as having a job as a "regular employee" as defined under paragraph 8.
- (o) <u>Core own-account workers</u> are those "own-account workers" (cf. paragraph 10) who work predominantly for the market independently of specific conditions imposed by the suppliers of credit, raw materials, etc., or of one main customer, and who rent or own their own equipment and other means of production.
- (p) <u>Franchisees</u> are workers who have explicit or implicit contracts with the owners of certain means of production (land, buildings, machinery, trade marks, etc.), holders of operational licences or suppliers of credit, which to a significant extent determine how the business is operated and require the payment of a specified part of total sales. "Franchisees" who engage "employees" (cf. paragraph 8) on a continuous basis should be classified as "employers" (cf. paragraph 9).
- (q) <u>Sharecroppers</u> are workers who hold a "self-employment" job (cf. paragraph 7) and in this capacity have explicit or implicit contracts with the owners of certain means of production (land, buildings, machinery, etc.) or suppliers of credit or raw materials, which to a significant extent determine how the business is operated and require the payment of a part of total production.
- (r) <u>Communal resource exploiters</u> are workers who hold a "self-employment" job (cf. paragraph 7) and in this capacity use a natural resource (e.g. land, fishing grounds, hunting and gathering areas) to which there are no individual property rights, but for which their community or the State may have certain management responsibilities.
- (s) <u>Subsistence workers</u> are workers who hold a "self-employment" job (cf. paragraph 7) and in this capacity produce goods or services which are predominantly consumed by their own household and constitute an important basis for its livelihood.
- (t) Countries may need and be able to supplement a national classification by status in employment with the type of organisation with which they are employed, in particular whether "employees" are employed in the private or the public sector, or whether the employing organisation is partly owned by foreign individuals or organisations (a "joint venture") or fully owned by foreigners.

V. CLASSIFICATION OF PERSONS

15. Employed persons can be classified by status in employment according to the following rules:

- (a) a person with only one classifiable job during the reference period should be classified to the status in employment group of that job;
- (b) a person with two or more jobs during the reference period should be classified to the status in employment group of that set of equally classified jobs at which he/she has worked the longest hours, or which has provided the highest income from employment during that period (or which can be expected to provide the highest income from work carried out in that period, if payment can only be expected in the future).
- 16. The ICSE-93 may be applicable, according to national practices and circumstances, to persons who have held a job, or who are seeking a job, regardless of their labour force status in the reference period. For the employed, it should apply to the job (or jobs) held in the reference period. For the unemployed, it may apply to either a job previously held, if any, or, according to national practices and circumstances, to the type of job which they are seeking.

VI. DATA COLLECTION AND INTERNATIONAL REPORTING

- 17. The data necessary to classify jobs or persons according to nationally significant status in employment groups should be collected in ways corresponding to the descriptive and analytical needs which the individual statistical programme serves, both with respect to precision of measurement and with respect to the number and type of groups separately identified. Using questionnaires with one question and a small set of pre-coded groups to be selected by the respondents, or by interviewers on the basis of the information provided by the respondents, may be less expensive but will normally result in less precise measurement of the distribution of jobs or persons over relevant status in employment groups than the use of several questions with response alternatives designed to allow classification to the relevant groups at the processing stage. The Conference notes that the ILO Bureau of Statistics will provide guidelines on how to collect and process information about status in employment in statistical surveys and censuses.
- 18. It is recommended that countries, as far as possible, design their data collection and processing procedures so that they will be able to give estimates for those of the following categories which are nationally significant:
 - 1. employees;
 - 2. employers;
 - 3. own-account workers;
 - 4. members of producers' co-operatives;
 - 5. contributing family workers;
 - 6. workers not classifiable by status.
- 19. The ICSE-93 group into which "owner-managers of incorporated enterprises" (cf. paragraph 14, item (a)) are classified should be indicated and separate information should be provided about them, whenever possible, to facilitate both labour market analysis and international comparisons. The countries are also asked to identify, for the users of their statistics, which of the separate groups reported contain the data for persons in any of the groups not separately reported.

SECTION 3: INDUSTRY

3.1 INDUSTRY AND SIC DERIVED VARIABLES

The SIC classifications contain the following breakdowns:

SIC(80)SIC(92)Divisions (1 digit)Sections (1 digit)Classes (2 digit)Divisions (2 digit)Groups (3 digit)Group (3 digit)Units (4 digit)Class and sub-class (4/5 digit)

The following industry DVs have been created for use within the specific LFS databases listed below:

D93F Main job INDMAIN (4 digit) Main job INDM92M (4 digit) INDS92M (1 digit) INDG92M (3 digit) INDD92M (2 digit) INDIVM (1 digit) INDGRM (3 digit) INDCLM (2 digit) Second job Second job INDSEĆ INDM92S **INDIVS** INDS92S INDGRS INDCLS INDG92S INDD92S Previous job Previous job **INDLAST** INDM92L **INDIVL** INDS92L **INDGRL** INDG92L **INDCLL** INDD92L Job 3 months ago Job 3 months ago INDM3 INDM923 MM93 and earlier **MM94** Job one year ago INDM92O Job one year ago INDONE

The new industry coding classification, SIC(92), was introduced in the Winter LFS 1993/94 quarter, replacing SIC(80). All quarters prior to Winter 1993/94 were coded using SIC(80), all those from Winter 1993/94 onwards will be coded using SIC(92). However, in order to make comparisons across the two periods, conversion DVs have been drawn up, at the 1 digit level only, allowing tables to be run based on either SIC(80) or SIC(92).

The following SIC DVs are available to convert data from SIC(80) to SIC(92) and vice versa:

SN93 "old-new"

SICMAIN - main job

SICSEC - second job

SICLAST - previous job

SICM3 - job 3 months ago

SIC80M - main job

SIC80S - second job

SIC80L - previous job

SIC80O - job one year ago (spring only)

3.2 STANDARD INDUSTRIAL CLASSIFICATION IN THE LFS SIC(80) TO SIC(92)

This section provides detailed information about the transition from SIC(80) to SIC(92) and explains the approach used to produce a consistent back series.

Summary

- The latest classification for industry, SIC(92), was introduced in the winter 93/94 LFS.
- At the same time an improved interviewer coding list was introduced in the LFS.
- Two approaches were used to produce back series on the new basis: the mapping approach, using information on where industries in the old classification would be included in the new classification; and the linked records approach, using information taken from the LFS on people who were coded using both classifications. This latter approach proved to be more sophisticated and useful.

About the new classification

- 1. From winter 1993/94, the industrial classification used by the LFS changed to "Standard Industrial Classification of economic activities 1992" or SIC(92). In earlier quarters the previous, 1980, Standard Industrial Classification (SIC(80)) was used for the LFS.
- 2. This change is part of a more general move of the UK's economic statistics to SIC(92). Industrial classifications need to be revised periodically to take account both of changes in the relative importance of various industries and of changes in the uses of statistics. In particular the new SIC has far more detail in the classification of services reflecting the growth in this area throughout the 1980s.
- 3. The way industries are grouped in SIC(80) and SIC(92) is very different. The highest level in SIC(80) are the 10 divisions, represented by single digit from "0" to "9", whereas the SIC(92) has 17 sections represented by the letters "A" to "Q". The change in emphasis in the classifications can be seen by the fact that manufacturing, which was previously spread over 3 divisions, is now a single section whereas services, which were 4 divisions, are now spread over 11 sections. However at the very lowest level many of the industry classifications are very similar.
- 4. The introduction of the new SIC follows the introduction of new industrial classifications by the UN (ISIC rev 3) and the EC (NACE rev 1). SIC(92) is identical with these classifications at an aggregate level. This enables valid comparisons to be made between statistics for various countries. This international compatibility is particularly important for the LFS, as the UK is required to send data from the spring survey to Eurostat (the statistical office of the European Communities) to form part of a EU wide Labour Force Survey.

Implementation of the SIC in the LFS

- 5. In the LFS the SIC is used to classify each person with a job by the primary industry of the workplace that they work from. For example, a cook in a canteen which is part of a factory will be classified to "Manufacturing", rather than "Hotels and Restaurants".
- 6. During their first LFS interview, respondents are asked for a brief description of the industry of. their current workplace if they are in employment; or their last workplace if they have no job in the reference week. After the interview has been completed this description is coded by the interviewer to SIC using a coding list (which is a comprehensive list of industries and their corresponding SIC codes). The introduction of the new SIC was used as an opportunity to extend the number of entries in the coding list showing some industries in more detail.
- 7. Usually, if when a respondent is re-interviewed they have started a different job since the last interview, they are asked for a new description. This is again coded to SIC after the interview. If the respondent has not started a different job, the industry description and coding from the previous interview is retained.

Introduction of the new SIC into the LFS

- 8. In December 1993/4, even when the respondent's situation had not changed, a new SIC code needed to be input because of the introduction of the new SIC. It was decided not to dual code each case in the survey with both SIC(80) and SIC(92) as this would have involved using two separate coding lists in the same quarter, which would have inevitably led to confusion amongst interviewers who were already having to code far more industry codes than usual.
- 9. For the four fifths of the sample who were being re-interviewed in winter 1993/94, an old SIC(80) code was available on the autumn 1993 database. If the respondent had not changed their job between the two interviews, the SIC(92) code on the winter 1993/94 database could be combined with the SIC(80) code on the autumn database to give a dual coding of the same workplace. This linked records approach was felt to be the most efficient way of investigating the effect of the changes to the industry classification.

The mapping approach to producing back series

- 10. Before the new SIC was introduced, an attempt was made to produce estimates for quarters before winter 1993/94 classified to SIC(92) at an aggregate (section) level. Rather than re-coding each case in the existing database to the new SIC, which was clearly impractical, a mapping was constructed from the lowest level SIC(80) codes to SIC(92) at the section level.
- 11. The mapping was set up by assigning each of the lowest level SIC(80) industries to an SIC(92) section depending on where it was thought the people in this industry would be coded under SIC(92). Whilst this was relatively straightforward for most industries there were a number of old SIC(80) industries which are split over more than one section in SIC(92). For example the production and transmission of TV and radio programmes, which used to be grouped together in Division 9 in SIC(80), were split with the transmission activities included in Section 1, whilst the production side was included in Section 0.
- 12. Because time constraints meant data from the linked records approach was not available, the results from the mapping exercise, carried out before any real data coded to SIC(92) was available, were used in the Winter 1993/94 Quarterly Bulletin.
- 13. The linked records data has since shown that about 90% of cases in autumn 1993 were assigned to the same classification using the mapping as they were coded to in winter 1993/94. Of the remaining 10%, many will have been the result of errors in coding and other random effects which would tend to balance out. However there do appear to be systematic biases in the results form the mapping procedure. Whilst these biases are relatively small in absolute terms they are relatively large when compared to recent changes in the numbers in each industry and will thus distort any change measured over the period autumn 1993 to winter 1993/94.

The linked records approach to calculating back series

- 14. After the Winter 1993/94 Quarterly Bulletin went to press, data from the linked records approach became available and has been used to calculate more accurate estimates of back data consistent with that collected using the SIC(92) classification.
- 15. Rather than use the linked records data to calculate back series directly from SIC(80), it was felt that more accurate estimates would be produced by refining the results from the mapping exercise, which had after all succeeded in assigning a large majority of the cases to the correct industry.
- 16. This approach was used to produce corrected estimates for those data in the Quarterly Bulletin most affected by the deficiencies in the mapping, namely estimates of absolute numbers of people by industries. Other estimates, such as unemployment rates and hours worked were thought to be less affected.
- 17. The first step in the exercise was to produce a cross-tabulation of the SIC(92) section coded in winter 1993/94 against the SIC(92) section the case had been mapped into in autumn 1993, for

those people interviewed in both quarters who had not changed jobs between interviews. This is shown at annex 1, aggregated to the groupings used in the LFS Quarterly Bulletin.

- 18. As expected most people were mapped into the same section that they were then coded into (the cells along the leading diagonal). There are also cases in virtually all the cells, for the most part indicating that there is a certain level of error in the data. However there are a number of off-diagonal entries with substantial numbers of cases in them. Where these off diagonal entries balance out, for example approximately 50 people were mapped to "Transport" but coded to "Manufacturing" and a similar number vice versa, this may indicate ambiguities in the coding. However, where there is a clear imbalance, for example more people are mapped to "Manufacturing" but coded to "Construction" than vice versa, the cross tabulation is illustrating problem areas in the mapping.
- 19. The next step was to use the information contained in this cross-tabulation to produce more accurate estimates. The following formula was used:

where:

aij is the number of cases mapped into category i and coded into category j,

Mti is the number of people in category i in quarter t estimated using the mapping,

 C_{tj} is the corrected estimate of the number of people in category j in quarter t and n is the number of industrial categories in the breakdown used, with i and j integers between 1 and n corresponding to the industrial categories.

- 20. This equation is intuitively sensible. If **a**_{ij} is relatively large (ie the number of cases mapped to Section i but coded to Section j is large) then a proportion of the people estimated to be in Section i in the "mapping" estimates are included in Section j in the corrected estimates. It can also be shown that the total of the corrected estimates is equal to the total of the mapped estimates.
- 21. This process was used to correct the estimates in tables 4, 5 and 6 of the quarterly bulletin using separate cross-tabulation tables for males, females, the self employed and part-time workers.
- 22. The data produced using the linked records approach appears intuitively more reasonable. For example, annex 2 shows that a large number of the cases mapped into Section D were actually coded into other sections. Thus the mapped estimates were over estimating the number of people in Section D before Winter 1993/4. The linked records data corrects for this over-estimation. As a result the annual change into winter 1993/94 in the number of employees and self employed in Section D: Manufacturing, calculated as a drop of 452,000 using the mapping approach, is calculated to be a more plausible drop of 118,000 using the linked records approach.
- 23. The mapping approach has been used to put pseudo-SIC(92) codes on all the cases in the existing LFS databases. Thus, back data can be run for any conceivable analysis on this basis. In contrast the linked records calculations have to be carried out for each analysis in turn. As a result the corrected data is only available for a limited number of series.

3.3 UK STANDARD INDUSTRIAL CLASSIFICATION OF ECONOMIC ACTIVITIES - SIC 92

The 1992 SIC is broken down into 17 main alphabetical sections, 14 sub-sections, 60 divisions, 222 groups, 503 classes and 142 subclasses; these are set out in the following pages:

The 17 main Divisions in the 1992 SIC are:

- A Agriculture, Hunting and Forestry
- B Fishing
- C Mining and Quarrying
- D Manufacturing
- E Electricity, Gas and Water Supply
- F Construction
- G Wholesale and Retail Trade: Repair of Motor Vehicles, Motorcycles and Personal Household Goods
- H Hotels and Restaurants
- I Transport, Storage and Communication
- J Financial Intermediation
- K Real Estate, Renting and Business Activities
- L Public Administration and Defence: Compulsory Social Security
- M Education
- N Health and Social Work
- O Other Community, Social and Personal Service Activities
- P Private Households with Employed Persons
- Q Extra-Territorial Organisations and Bodies

Detailed breakdown of the full 1992 Standard Industrial Classification

SECTION A	AGRICULTURE, HUNTING AND FORESTRY	
01	AGRICULTURE, HUNTING AND RELATED SERVICE ACTIVITIES	
01.1	01.11 01.12 01.13	Growing of crops; market gardening; horticulture Growing of cereals and other crops not elsewhere classified Growing of vegetables, horticultural specialities and nursery products Growing of fruit, nuts, beverage and spice crops
01.2	01.21 01.22 01.23 01.24 01.25	Farming of animals Farming of cattle, dairy farming Farming of sheep, goats, horses, asses, mules and hinnies Farming of swine Farming of poultry Other farming of animals
01.3	01.30	Growing of crops combined with farming of animals (mixed farming) Growing of crops combined with farming of animals (mixed farming)
01.4	01.41 01.42	Agricultural and animal husbandry service activities, except veterinary activities Agricultural service activities Animal husbandry service activities, except veterinary activities
01.5	01.50	Hunting, trapping and game propagation including related service activities Hunting, trapping and game propagation including related service activities
02	FORESTRY, LOGGING AND RELATED SERVICE ACTIVITIES	
02.0	02.01 02.02	Forestry, logging and related service activities Forestry and logging Forestry and logging related service activities
SECTION B	FISHING	
05	FISHING, OPERATION OF FISH I INCIDENTAL TO FISHING	HATCHERIES AND FISH FARMS; SERVICE ACTIVITIES
05.0	05.01 05.02	Fishing, operation of fish hatcheries and fish farms; service activities incidental to fishing Fishing Operation of fish hatcheries and fish farms
SECTION C	MINING AND QUARRYING	
Subsection CA	MINING AND QUARRYING OF ENERGY PRODUCING MATERIALS	
10	MINING OF COAL AND LIGNITE;	EXTRACTION OF PEAT
10.1 April 2006	10.10/1 10.10/2 10.10/3	Mining and agglomeration of hard coal Deep coal mines Opencast coal working Manufacture of solid fuel 36

	Labour Force Survey User Guide – Volume 5: LFS Classifications		
	10.2	10.20	Mining and agglomeration of lignite Mining and agglomeration of lignite
	10.3	10.30	Extraction and agglomeration of peat Extraction and agglomeration of peat
11			OLEUM AND NATURAL GAS; SERVICE ACTIVITIES EXTRACTION EXCLUDING SURVEYING
	11.1	11.10	Extraction of crude petroleum and natural gas Extraction of crude petroleum and natural gas
	11.2	11.20	Service activities incidental to oil and gas extraction excluding surveying Service activities incidental to oil and gas extraction excluding surveying
12		MINING OF URANIUM AND THO	RIUM ORES
	12.0	12.00	Mining of uranium and thorium ores Mining of uranium and thorium ores
Subse	ction CB	MINING AND QUARRYII	NG EXCEPT ENERGY PRODUCING MATERIALS
13		MINING OF METAL ORES	
	13.1	13.10	Mining of iron ores Mining of iron ores
	13.2	13.20	Mining of non-ferrous metal ores, except uranium and thorium ores Mining of non-ferrous metal ores, except uranium and thorium ores
14		OTHER MINING AND QUARRYIN	IG
	14.1	14.11 14.12 14.13	Quarrying of stone Quarrying of stone for construction Quarrying of limestone, gypsum and chalk Quarrying of slate
	14.2	14.21 14.22	Quarrying of sand and clay Operation of gravel and sand pits Mining of clays and kaolin
	14.3	14.30	Mining of chemical and fertilizer minerals Mining of chemical and fertilizer minerals
	14.4	14.40	Production of salt Production of salt
	14.5	14.50	Other mining and quarrying not elsewhere classified Other mining and quarrying not elsewhere classified
SECTI	ON D	MANUFACTURING	
Subse	ction DA	MANUFACTURE OF FO	OD PRODUCTS; BEVERAGES AND TOBACCO
Subsection 15	ction DA	MANUFACTURE OF FOOD PRO	

15.2	15.20	Processing and preserving of fish and fish products Processing and preserving of fish and fish products
15.3	15.31 15.32 15.33	Processing and preserving of fruit and vegetables Processing and preserving of potatoes Manufacture of fruit and vegetable juice Processing and preserving of fruit and vegetables not elsewhere classified
15.4	15.41 15.42 15.43	Manufacture of vegetable and animal oils and fats Manufacture of crude oils and fats Manufacture of refined oils and fats Manufacture of margarine and similar edible fats
15.5	15.51 15.52	Manufacture of dairy products Operation of dairies and cheese making Manufacture of ice cream
15.6	15.61 15.62	Manufacture of grain mill products, starches and starch products Manufacture of grain mill products Manufacture of starches and starch products
15.7	15.71 15.72	Manufacture of prepared animal feeds Manufacture of prepared feeds for farm animals Manufacture of prepared pet foods
15.8	15.81	Manufacture of other food products Manufacture of bread; manufacture of pastry goods and cakes
	15.82 15.83 15.84 15.85	Manufacture of rusks and biscuits; manufacture of preserved pastry goods and cakes Manufacture of sugar Manufacture of cocoa; chocolate and sugar confectionary Manufacture of macaroni, noodles, couscous and similar farinaceous products

3.4 UK STANDARD INDUSTRIAL CLASSIFICATION OF ECONOMIC ACTIVITIES (SIC80)

The Standard Industrial Classification (SIC) is broken down into 4 areas; the divisions, the classes, the groups and the activity units. At the most detailed level the units are distinguished with a 4 digit classification. Each unit is allocated to a group (3 digits). Each group is allocated to a class (2 digits) and each class allocated to a division (1 digit).

Of the four digit activity units the first digit denotes the division the unit is contained within. The first 2 digits denote the class and the first 3 digits denote the group classification.

1: DIVISIONS

(INDIVL, INDIVM, INDIVO, INDIVS)

SIC 80 codes	INDUSTRY
0	Agriculture, forestry & fishing
1	Energy & water supplies
2	Extraction of minerals & ores other than fuels; manufacture of metals, mineral products & chemicals
3	Metal goods, engineering & vehicles industries
4	Other manufacturing industries
5	Construction
6	Distribution, hotels & catering (repairs)
7	Transport & communication
8	Banking, finance, insurance, business services & leasing
9	Other services

Note:

nes = not elsewhere stated

2:

CLASSES (INDCLL, INDCLM, INDCLO, INDCLS)

•				
SIC 80 codes	INDUSTRY			
01	Agriculture & horticulture			
02	Forestry			
03	Fishing			
11	Coal extraction & manufacture of solid fuels			
12	Coke ovens			
13	Extraction of mineral oil & natural gas			
14	Mineral oil processing			
15	Nuclear fuel production			
16	Production & distribution of electricity, gas & other forms of energy			
17	Water supply industry			
21	Extraction & preparation of metalliferous ores			
22	Metal manufacturing			
23	Extraction of minerals not elsewhere specified			
24	Manufacture of non-metallic mineral products			
25	Chemical industry			
26	Production of man-made fibres			
31	Manufacture of metal goods not elsewhere specified			
32	Mechanical engineering			
33	Manufacture of office machinery & data processing equipment			
34	Electrical & electronic engineering			
35	Manufacture of motor vehicles & parts thereof			
36	Manufacture of other transport equipment

3.5 PRIVATE/PUBLIC SECTOR CLASSIFICATION

Summary

In the LFS, the "public sector" is defined as that owned, funded or run by central or local government, and the "private" sector as everything else. The private sector includes:

- Public limited companies (PLC), companies that are quoted on the stock market and have shareholders.
- limited companies (ltd). Small businesses often owned by one or more individuals. These may also be referred to as private limited companies.
- Self-employed individuals; sole traders, or owners of small shops or businesses.
- Charities, private trusts, housing associations or other voluntary organisations.
- Trade Unions (employees of).

Some respondents to the LFS are confused as to whether their industry is "public" or "private" - guidelines on helping this confusion and details of the variables can be found in the LFS User Guide, Volume 3.

Private/Public Sector Classification in the LFS

The Private/Public sector information was first collected in the autumn 1993 quarter. People interviewed are first asked whether in their main job they work for:-

- (a) a private firm or business or limited company
- (b) another kind of organisation

Those respondents who stated that they worked for some other kind of organisation were then asked what kind of non-private organisation it was:

- (1) Public company, plc
- (2) Nationalised industry or state corporation
- (3) Central government, Civil Service, armed forces
- (4) Local government or council (inc. police, fire services & local authority controlled schools or colleges)
- (5) University, Polytechnic or other grant funded educational establishment
- (6) Health authority or NHS trust
- (7) Charity, voluntary organisation or trust
- (8) Other kind of organisation

The answers to these two questions are then combined to produce the private/public sector split. Private Sector = (a)+(1)+(7)

Public Sector = (2)+(3)+(4)+(5)+(6)+(8)

Differences between LFS and National Accounts classifications of Private/Public Sectors

The main compositional difference between the LFS and National Accounts classification of Private/Public Sectors is that whilst The LFS classification of Private/Public sector is based on people, not jobs (relying primarily on self-assessment), the National Accounts classification uses ONS's Earnings and Employment Division's workforce analysis of employees and self-employed and subtracts from the industry totals the estimate of employment in central government, local authorities and public corporations (ie private sector is a residual group).

Other differences relate to educational institutions and (less significantly) to doctors and dentists.

i) Both the National Accounts and the LFS include local authority-controlled schools as public sector. But universities/polytechnics/higher education colleges, grant-maintained schools, and

FE and 6th form colleges are treated by the National Accounts as private (non-profit making) sector, but by the LFS as public sector.

ii) The National Accounts treats all general practitioners (doctors and dentists) as private sector. Their treatment in the LFS depends whether their practice is mainly NHS or private. Interviewers are instructed to probe respondents to determine which coding is most appropriate.

SECTION 4: OCCUPATION

4.1 CODING OF OCCUPATIONS (SOC)

Standard Occupational Classification (SOC) 1990 was first used in the LFS in 1991. It was revised, updated and published as SOC 2000 in June 2000. SOC 2000 is available on all LFS datasets from Spring 2001 awards.

The two main concepts of the classification remain unchanged.

- (i) kind of work performed job, and
- (ii) the competent performance of the tasks and duties skill

Although there are still nine major groups in the top tier of the classification, the titles have been changed to reflect the change in content.

Both SOC 1990 and SOC 2000 have a four-tiered structure but for SOC 2000 the sub-major groups have been brought into the classification's numbering system.

SOC 2000 Example of the numbering system

Major group	2	Professional occupations
Sub major group	21	Science and technology professionals
Minor group	211	Science professionals
Unit group	2111	Chemists

A considerable number of jobs have moved between the unit groups, many between minor groups and more than a few between major groups. However the numbers of groups in the tiers are similar.

	SOC	SOC
	1990	2000
Major groups	9	9
Sub major groups	22	25
Minor groups	77	81
Unit groups	371	353

For LFS purposes, DVs have been set up to allow users to run tables at each of these 3 of the 4 levels.

The DV's for SOC 1990 are:

1.	Major Groups	SOCMAJL, SOCMAJM, SOCMAJO, SOCMAJS
2.	Minor Groups	SOCMINL, SOCMINM, SOCMINO, SOCMINS
3.	Unit Groups	SOCAPP, SOCLAST, SOCMAIN, SOCSEC, SOCM3, SOCONE

The DVs for SOC 2000 are:

1.	Major Groups	SC2KLMJ, SC2KMMJ, SC2KOMJ, SC2KSMJ
2.	Minor Groups	SC2KLMN, SC2KMMN, SC2KSMN
3.	Unit Groups	SOC2KAP, SOC2KL, SOC2KM, SOC2KM, SOC2KO, SOC2KR

For details of these DVs, see LFS User Guide, Volumes 3 and 4.

SOC 1990 Major groups:

SOC codes	OCCUPATION
1 2 3 4 5	Managers and administrators Professional occupations Associate professional and technical occupations Clerical and secretarial occupations Craft and related occupations Personal and protective service occupations
7	Sales occupations
8	Plant and machine operatives
9	Other occupations

SOC 2000 Major groups :

SOC codes	OCCUPATION
1	Managers and senior officials
2	Professional occupations
3	Associate professional and technical occupations
4	Administrative and secretarial occupations
5	Skilled trades occupations
6	Personal service occupations
7	Sales and customer service occupations
8	Process, plant and machine operatives
9	Elementary occupations

4.2 REVISION OF THE STANDARD OCCUPATIONAL CLASSIFICATION (SOC 2000)

The Occupational Information Unit of ONS and the Institute for Employment Research, at the University of Warwick, worked together for over two years to produce the revised classification. The work started with a consultative exercise to discover the views of users on whether or not the classification needed to be revised. Most respondents, including those who value continuity, wanted changes. Some users found that SOC unit groups were too heterogeneous, others thought the classification too narrow and yet others that it was too broad. Specific problems included insufficient definition in culture, arts and sport, IT, the care sector and tourism, and too many 'not elsewhere classified' groups.

Two other sources of pressure to revise SOC 1990 were the need to improve alignment with the International Standard Classification of Occupations and the classification issues revealed by the research to develop the National Statistics Socio-economic Classification.

Major influences on the nature and shape of the revision were the innovations associated with technological developments and less directly, the re-definition of work reflecting the educational attainment of those entering the labour market.

The main features of the revision included:

- a tighter definition of managerial occupations
- a thorough overhaul of computing and related occupations
- the introduction of specific occupations associated with the environment and conservation
- changes linked to the upgrading of skills but the de-skilling of manufacturing processes
- the recognition of the development of customer service occupations and the emergence of remote service provision through the operation of call centres.

Whilst an objective of the revision had been to maintain a reasonable degree of continuity with SOC 1990, the main priority was to bring the classification up-to-date to reflect changes in society. This has resulted in significant change to the classification.

SECTION 5: SOCIO-ECONOMIC

5.1 THE NATIONAL STATISTICS SOCIO-ECONOMIC CLASSIFICATION

The National Statistcis Socio-economic Classification (NS-SEC) has been developed from a sociological classification that has been widely used in pure and applied research, known as the 'Goldthorpe Schema' (see Goldthorpe 1980/1987¹/ and 1997²; Erikson and Goldthorpe 1992³). The decision to adopt the Goldthorpe classification as the basis for the NS-SEC was made because it is widely used and accepted internationally.

The NS-SEC is an occupationally based classification but has rules to provide coverage of the whole adult population. The information required to create the NS-SEC is occupation coded to the unit groups of the Standard Occupational Classification 2000 (SOC 2000) and details of employment status (whether an employer, self-employed or employee; whether a supervisor; number of employees at the workplace). Similar information was previously required for Social Class based on Occupation and Socio-economic Groups.

The version of the classification, which will be used for most analyses (the analytic version), has eight classes, the first of which can be subdivided.

The National Statistics Socio-economic Classification			
1	Higher managerial and professional occupations		
	1.1	Large employers and higher managerial occupations	
	1.2	Higher professional occupations	
2	Lower managerial and professional occupations		
3	Intermediate occupations		
4	Small employers and own account workers		
5	Lower supervisory and technical occupations		
6	Semi-routine occupations		
7	Routine occupations		
8	Never worked and long-term unemployed		

For complete coverage, the three categories Students, Occupations not stated or inadequately described, and Not classifiable for other reasons are added as 'Not classified'.

For more information see the description of NS-SEC on the National Statistics web site. www.statistics.gov.uk/methods quality/ns sec

SECTION 6: ETHNICITY

6.1 CODING OF ETHNICITY FROM MM01 ONWARDS

An interim output classification of ethnic groups for National Statistics data sources was introduced in 2001. From spring 2001, the Labour Force Survey (LFS) introduced new questions on ethnicity in line with this classification. The new classification has two levels. Level 1 is a broad classification into 5 main ethnic groups – White, Mixed, Asian or Asian British, Black or Black British, Chinese, and Other. Level 2 nests within Level 1, and provides a finer 15-point classification. This approach is designed to meet a range of user needs and to be as compatible as possible with the classifications proposed for Census outputs. In general the preference is for Level 2 (detailed) categories to be adopted wherever possible.

From spring 2001, the LFS asks an initial question to collect Level 1, with supplementary questions used to arrive at Level 2 of the classification. No comparison should be made between the old and new ethnic classification in the LFS, because not only are the categories different but, the questions and coding of answers underlying the data are also very different.

NEW ETHNIC CLASSIFICATION VARIABLES: (MM01 onwards):

ETHCEN6		ETHCEN15			
1	White	1	British Other White (includes trick)		
2	Mixed	2	Other White (includes Irish) White and Black Caribbean		
		4 5	White and Black African White and Asian		
		6	Other Mixed		
3	Asian	7	Indian		
		8	Pakistani		
		9	Bangladeshi		
		10	Other Asian		
4	Black	11	Black Caribbean		
		12	Black African		
		13	Other Black		
5	Chinese	14	Chinese		
6	Other	15	Other		
		-6	N/A White Northern Irish		
-7	DNA: Imputed	-7	DNA: Imputed		
(NB	s.MM01 only - children only)	(NB	3. MM01 only: children & Northern Irish only)		
-8	DK/Refusal	-8	•		
-9	DNA	-9	DNA		

NEW ETHNIC IMPUTATION INDICATOR VARIABLES (MM01 only):

	HIMP	EIHIMPID		
0	Ethcen6 not imputed	0	Ethcen15 not imputed	
1	Ethcen6 imputed	1	Ethcen15 imputed	

6.2 QUALITY ISSUES FOR SPRING 2001 DATA

ETHIMD

LFS respondents are interviewed in five successive quarters. In normal circumstances, where information about the respondent does not change between quarters, or in situations where respondents could not be contacted in a later quarter, information from the previous quarter is rolled forward. This is referred to as imputation. With the introduction of the new ethnicity questions, there were no data to roll forward for these imputed cases.

ETUIMD45

These imputed cases represented around 2.6 million people aged 16 and over (5.6 per cent of the total population aged 16 and over). The known characteristics of the imputed cases were examined using data from the winter quarter. This analysis showed that the imputed group contained a smaller proportion of white people, a higher proportion of men and a higher proportion of people aged under 25; they were more likely to be employed and less likely to be economically inactive than the rest of the respondents in that quarter.

Without treating missing values, analysis by ethnic group for this quarter would be misleading. For this reason, additional imputation procedures were adopted to ensure the greatest possible number of cases had the new ethnicity information present for the spring 2001 quarter. For more information see 'The new ethnicity classification in the Labour Force Survey', *Labour Market Trends*, Dec 2002, p657-666.

6.3 CONTINUITY

Although the key messages regarding differences between and within ethnic groups remains the same for broadly comparable groups under the old and new classification, it is no longer possible to produce directly comparable analysis over time directly from the LFS individual record data. Nor is it possible to compare tables of aggregates on the new basis with those produced on the old basis. However, the importance of historic data is appreciated, and for this reason 'back-cast' estimates were produced at both Level 1 and Level 2 of the new classification. The full back-cast data tables are available on the National Statistics website: www.statistics.gov.uk/statbase/product.asp?v1nk=9670

Quarterly back-cast estimates have only been produced for periods from spring 1997 onwards, due to an amendment made to the answer questions in winter 1996. This meant that the back-casting methodology could not be easily applied to periods before this. More importantly though, ethnicity as a concept and the terms used to describe it change over time. Using more recent concepts to describe the past runs the risk of providing an inaccurate historical picture which increases the further back in time they are applied.

SECTION 7: EDUCATION

7.1 INTERNATIONAL STANDARD CLASSIFICATION OF EDUCATION (ISCED97)

ISCED was designed by UNESCO in the early 1970's to serve as an instrument suitable for assembling, compiling and presenting comparable statistics of education both within individual countries and internationally. Some labour market statistics make use of ISCED (e.g. unemployment rates by highest level of education).

The classification was revised in November 1997 in collaboration with OECD, Eurostat and Member States of all three organisations. ISCED97 takes into account new developments and changes in education, and now covers more than 'formal' education. It now includes:

- playgroups and day-care provision even though they may include some element of education;
- adult education;
- training (except where it involves an element of study at an FE college or similar institution).

The ISCED97 also covers all organised and sustained learning activities for children, youth and adults including those with special educational needs. In providing a sounder basis for statistical comparisons between different education systems, the revised ISCED aims to indirectly aid educational policy makers and others who want to learn from the educational development experience of other countries.

More information about the ISCED97 can be found on the UNESCO website www.unesco.org

Overview of ISCED97 and proposed categorisation of main UK Programmes

ISCED97 Level	Main UK Programmes
Level 0 Pre-Primary education	Provision validated and linked to 'Desirable Outcomes for Children's Learning' (i.e. provision for 3 and 4 year olds) - including Nursery classes
Level 1 Primary Education (or First Stage of Basic Education	Reception classes etc. Infant Classes, Junior Classes (NC Key Stages 1 and 2 in E&W) Basic Adult literacy/numeracy courses
Level 2 Lower Secondary (or Second Stage of Basic Education)	Secondary school classes - age less than 14 (NC Key Stage 3 in E&W) *GCSE / SCE 'standard grade' courses *NVQ/SVQ levels 1 and 2 * Youth Training / National Traineeships
Level 3 (Upper) Secondary Education	*GCSE / SCE 'standard grade' courses *NVQ/SVQ levels 1 and 2 * Youth Training / National Traineeships Modern Apprenticeships 'A' level/ SCE 'Higher' courses NVQ/SVQ level 3
Level 4 Post-Secondary non tertiary Education	HE Access courses
Level 5 First Stage of Tertiary Education	HND/HNC/ Nursing Training Bachelors Degrees Masters Degrees Post-graduate diplomas and certs. NVQ/SVQ levels 4 and 5
Level 6 Second Stage of Tertiary Education	Doctorates

Note that the boundary between ISCED97 levels 2 and 3 has still to be fixed for the UK.

This will affect the placement of some programmes.

7.2 EDUCATIONAL QUALIFICATIONS IN THE LFS SPRING 1993 ONWARDS

In Spring 1993 the qualification question on the LFS changed quite considerably from that used in the 1992 surveys. In the questionnaire this appears as QUAL, in SPSS as QUAL1, QUAL1, QUAL2, and in SuperCROSS as QUAL1, QUAL2 and QUAL3, referring to first, second, third qualification respectively. The 1992 list contained 15 categories, the 1993 list contained 29 categories.

Variables recording the highest qualification were also changed quite considerably between Spring 1992 and Spring 1993. HITRQL went from containing 17 categories in 1992 to 30 categories in 1993, and HIQUAP went from 20 categories to 34 categories. These changes were introduced so that it would be possible to fit the qualifications into NVQ equivalents. A list of the qualifications which currently make up the relevant NVQ levels is shown below.

Details of all of these variables are given in the Education and Training section of the LFS User Guide, Volume 3.

In Spring 1996 and Spring 2004 the educational qualifications in the LFS were changed again to provide more detailed information. The changes made to these questions were sufficiently large enough to warrant a change in name. LFS User Guide Volume 3 details these variables and their changes.

Educational Qualifications and their NVQ equivalents:

NVQ Level 5	Higher degree
NVQ Level 4	First degree
INVQ Level 4	First degree
	Other degree
	Diploma in Higher Education
	HNC, HND, BTEC etc higher
	Teaching - further education
	Teaching - secondary education
	Teaching - primary education
	Teaching - foundation stage
	Teaching - level not stated
	Nursing etc
	RSA higher diploma
	Other HE below degree
NVQ Level 3	GNVQ - advanced level
	A level or equivalent (2 or more)
	RSA advanced diploma or certificate
	OND, ONC, BTEC etc, national
	City and Guilds Advanced Craft
	Scot. certificate of 6th year studies (Scot. CSYS) (67%)
	SCE higher or equivalent (3+)
	Higher national qualification or equivalent (Scotland)
	Access to HE qualification
	AS-level or equivalent (4+)
	Trade Apprenticeships (50%)
	Other Qualifications (10%)
NVQ Level 2	CNIVO intermediate
INVQ Level 2	GNVQ - intermediate
	RSA diploma
	City and Guilds - Craft
	BTEC, SCOTVEC etc. first or general diploma
	O Level, GCSEs A-C and equivalents (5+)
	A level (1 only)
	AS level (2 or 3)
	Trade Apprenticeship (50%)

	Scottish CSYS (33%)
	SCE higher or equivalent (1 or 2)
	Intermediate 2 Higher qualification (Scotland)
	Other qualification (35%)
NVQ Level 1	GNVQ,GSVQ foundation level
	CSE below grade1,GCSE below grade C
	BTEC,SCOTVEC first or general certificate
	SCOTVEC modules
	RSA other
	City & Guilds other
	YT,YTP certificate
	Key Skills
	Basic Skills
	Entry Level
	Other Qualifications (55%)

Assumptions have to be made to convert the number of people holding qualifications into the numbers reaching particular NVQ levels. In some cases the whole group is allocated to a particular level, eg. all holders of degrees have reached level 4 equivalent. In other cases the qualifications in a particular category relate to more than one level, e.g. other professional or vocational qualifications. Assumptions based on available evidence were made to estimate the proportion of people holding qualifications at various levels within the group.

For example, of people with "other professional/vocational qualifications" as their highest qualification, 10% are assumed to be at level 3 and 35% at level 2. Therefore to calculate the number of people qualified to NVQ level 3 or higher, only 10% of those with this as their highest qualification would be included.

7.3 CODING OF SUBJECT OF DEGREE

From spring 1992 to spring 1997

The codes below relate to the variable SUBJCT1 - subject of degree – that appears on the LFS datasets from spring 1992 to spring 1997.

	OINOLE OUR LEGEO
1	SINGLE SUBJECTS Modicine

4	COMBINED OR GENERAL SCIENCE
5	COMBINED OR GENERAL SOCIAL SCIENCE
6	COMBINED OR GENERAL ARTS
7	OTHER GENERAL AND COMBINATIONS

From summer 1997 to winter 2003

In Summer 1997, the LFS introduced the variable SNGDEG to give a far greater detailed breakdown of single degree subject than SUBJCT1. A new variable CMBDEG was also introduced in summer 1997 to record the subject areas of a combined subject degree. Details of CMBDEG can be found in the LFS User Guide Volume 3.

The codes below relate to the variable SNGDEG.

7.4 CODING OF SUBJECT AREA OF QUALIFICATION -from spring 2001

Basic programmes

1

The codes below relate to the variables CURCODE and SUBCOD(1-8) (SUBCODE in Spring 2001 only). This is the subject area of the highest level 2 qualifications (excludes degrees and GCSE/O-level/A-level and equivalents). This coding frame is used as a response to the questions SUBJQ & CURSUB. Details of who are asked these questions are given in the LFS User Guide Volume 2.

14.0 14.2 14.3 14.4 14.5 14.6	Teacher training and education science Broad programmes Education science Training for pre-school teachers Training for teachers at basic level Training for teachers of subjects Training for vocational teachers

8.2 EUROPEAN CLASSIFICATION OF UK GEOGRAPHIC AREAS

Following extensive discussions, agreement has been reached with Eurostat, the Statistical Office of the European Union, on a new classification of UK areas for European purposes. The classification is known as the Nomenclature of Units for Territorial Statistics (NUTS) and provides a breakdown of the European Union's territory for producing regional statistics which are comparable across the Union. It has five hierarchical levels, and is built up from administrative units such as local government areas in the member states.

The Nomenclature for the UK is being revised to reflect the creation of unitary authorities throughout Wales, Scotland and parts of England, and the recent change to presenting regional statistics on the basis of Government Office Regions (replacing the Standard Statistical Regions).

Details of Agreement

At level 1, it has been agreed that Government Office Regions will replace Standard Statistical Regions within England. However, the North West and Merseyside regions will constitute a single area for this purpose. The agreed boundaries will coincide with the areas to be covered by the proposed Regional Development Agencies.

At level 2, major changes have been agreed compared with the current structure. These are:

- The separation of Cornwall and Devon into two separate areas, recognising the very different economic conditions of the two counties, and Cornwall's sparsity of population, geographical peripherality and distinct cultural and historic factors reflecting a Celtic background.
- The separation of London into Inner and Outer London recognising the differences between the inner city and the outer fringe, as well as the fact that London was one of the largest level 2 areas in the European Union.
- The two-way split of Wales to be on an east/west basis, rather than the current north/south structure. This reflects the evolving differences between the east and the less accessible Western and Valleys areas.
- Chances to boundaries in Scotland to recognise the area represented by Highlands and Islands
 Enterprise (HIE). This enables the structure to more closely reflect the uses to which NUTS-based
 statistics are put. The HIE area is defined by Act of Parliament and is currently recognised for
 economic development purposes by the EU and the UK.

At level 3, the agreement results in an increase from the current 65 to 133 areas. This has been arrived at by giving greater recognition to unitary authorities. In areas where unitaries are adjacent to each other, it has been necessary to combine some at level 3, in order to meet Eurostat's size requirements.

Level 4 is represented by individual local authority districts or unitary authorities. In Scotland, in order to reflect the HEE boundary at level 2, it has been necessary to use combinations of unitary authorities, LEC areas or parts thereof as the building blocks at levels 3 and 4. This will enable the lower level areas to be combined into either the HIE area, or to be aggregated to unitary authority areas.

Level 5 is to continue to be represented by wards throughout the UK.

LFS ESTIMATES AND NUTS LEVELS

ONS publishes unadjusted LFS estimates by Government Office Regions (NUTS level 1) in the Labour Market Statistics First Release and in the Quarterly Supplement to *Labour Market Trends*. Estimates for these regions are also available from the quarterly electronic datasets.

Published estimates are available for most NUTS 2 areas and for some of the NUTS 3 and 4 areas.

Estimates for all LADs (NUTS 4) are available electronically in pre-tabulated format, for selected variables only or from the NOMIS database. For more detail on local area data see volume 6 of the LFS User Guide.

Subject to degree of disclosiveness, the LFS dataservice (Ifs.dataservice@ons.gov.uk) can also provide data at ward level (NUTS 5).

8.3 PARLIAMENTARY CONSTITUENCY AREAS

Westminster parliamentary constituencies are the areas used to elect MPs (Members of Parliament) to the House of Commons, which is the primary legislative chamber of the UK and is located in Westminster, London.

At the May 2005 election there were 646 constituencies, each electing one MP using the first-past-the-post system

859	West Dunbartonshire

8.4 TRAVEL TO WORK AREAS

For those involved in labour market analysis and planning, it is useful to be able to define zones in which the bulk of the resident population also work. Commuting patterns are complicated but by applying a multi-stage allocation process ONS has defined 'Travel to Work Areas'.

The fundamental criterion is that, of the resident economically active population, at least 75% actually work in the area, and also, that of everyone working in the area, at least 75% actually live in the area.

The resulting pattern is that, although the definitive minimum working population in a TTWA is 3,500, many are much larger - indeed, the whole of London and surrounding area forms one TTWA.

The 308 current TTWAs were defined in 1998 using 1991 Census information on home and work addresses, and are based on complete 1991 wards.
