

## **National Statistics Opinions Survey – Technical Report – September 2010**

### **1. The sample**

The Opinions Survey uses a random probability sample stratified by: region; the proportion of households with no car; the proportion of households where the household reference person is in the National Statistics Socio-economic Classification (NS-SEC) categories one to three; and the proportion of people who are aged over 65 years. In common with most other ONS surveys, the Royal Mail's Postcode Address File (PAF) of 'small users' is used as the frame from which the Opinions sample is drawn. The PAF sampling frame contains approximately 26 million addresses in Great Britain, excluding those that receive large quantities of mail per day. Updated every three months, it is the most up-to-date and complete address database in the UK. The Opinions sample taken from the PAF covers Great Britain, excluding the Isles of Scilly and the Scottish Highlands and Islands.

Each month 67 postal sectors are selected, with probability of selection proportionate to size. Within each sector, 30 addresses are chosen randomly giving an initial sample of 2,010 addresses each month.

One person per household is selected to answer the Opinions module questions. At the start of the interview, the interviewer determines the household composition and then he/she selects the respondent from amongst all the over-16s. This selection is performed at random using a Kish grid. The data are subsequently weighted to correct for the unequal probability of selection that this causes. The interviewers endeavour to interview the selected respondent - proxy interviews are not taken.

### **2. Field Work**

All interviews are carried out face-to-face (except for telephone reissues) by ONS interviewers who have been trained to carry out National Statistics surveys. Advance letters are sent to all addresses, prior to the interview, giving a brief account of the survey. The interviewing period starts in the first week of the calendar month and continues for the duration of the month in question. Interviewers call at all the selected addresses unless a refusal has been made beforehand in response to the advanced letter. The interviewer makes up to eight calls at an address at different times of the day and week before coding the household as a non-contact. After the field period, a proportion of non-contacts and refusals are re-issued to the Telephone Unit where attempts are made to obtain an interview over a four-day period.

As with all National Statistics surveys, a quality check on field work is carried out through recall interviews with a proportion of respondents to make sure that the interviews actually took place with those respondents and that responses to questions are consistent.

### 3. Response Rate for September 2010

Each month the sample includes some ineligible addresses. The small users' Postcode Address File includes some business addresses and other addresses, such as new and empty properties, at which no private households are living. The expected proportion of such addresses, which are classified as ineligible, is about 9-10%. These are eliminated from the set sample before response rates are calculated.

The final response rate is calculated as the number of achieved interviews as a percentage of the eligible sample. The response rate detailed below is for the entire Opinions sample and may not reflect the number of cases in your data. The response rate for modules not reissued to the telephone unit was 60 per cent (1070 responding cases).

The response rate for September after reissues was 60 per cent as shown below:

	Number	Initial sample (%)	Response rate (%)
<b>Set Sample of Addresses</b>	<b>2010</b>	<b>100</b>	
†† Ineligible Addresses	179	9	
Eligible Addresses	1829	91	
<b>Eligible Households</b>	<b>1796</b>		<b>100</b>
No interview – refusal	527		29
† Unknown Eligibility	26		1
No interview – non-contact	161		9
<b>Interviews</b>	<b>1082</b>		<b>60</b>

† Unknown eligibility also includes a proportion of unallocated cases.

†† Ineligible addresses also include a proportion of unallocated cases.

### 4. Weighting the data

Weighting factors are applied to Opinions data to correct for unequal probability of selection caused by interviewing only one adult per household, or restricting the eligibility of the module to certain types of respondent. This is accounted for in the design weight, *wta* (see 4.2). The weighting system also adjusts for some non-response bias by calibrating the Opinions sample to ONS population totals. This is integrated into the final weight variables, *indwgt* and *hhgwt* (see 4.4).

Despite the considerable efforts made by interviewers to maximize response rates, approximately 35 per cent of selected individuals decline to take part or cannot be contacted. In order to compensate for this differential non-response bias, the Opinions sample is divided into weighting classes of age-group by sex and Government Office Region. The number of people belonging to each sub-group in the population is provided by ONS. The weighting ensures that the weighted sample distribution across regions and across age-sex groups matches that in the population.

Consequently, respondents belonging to sub-groups that are prone to low levels of response are assigned higher weights. For example, young males living in London tend to have a lower response rate and are therefore assigned higher than average weights.

Grossing up the data by age and sex and by region to ONS population totals will reduce the standard errors of survey estimates if the survey variable is correlated with age, sex and region.

#### **4.1 Using weighted data**

The design weight is re-scaled so that the weighted sample size equals the unweighted size (i.e. the number of responding individuals).

If a module of questions applied only to a sub-group of the population, for example eligibility was restricted by age, or the module was asked only in England, the weight for the module is scaled so that the weighted sample size for that sub-group is the same as the unweighted sample size.

The final supplied weights should be used in your statistical analyses to produce estimates from the survey. Some statistical packages will properly account for the weighting and other complex sample design features in statistical tests. However where these are not available, some analysts will use simpler, approximate tests. It is important when doing so to make use of actual sample sizes, rather than weighted (grossed) sample sizes in such tests, or the test will act as if the sample was the size of the population and all comparisons will become apparently significant.

#### **4.2 Calculation of the design weight**

##### *i. Unit of Analysis: Individual (Weight A (wta))*

The Opinions' sampling methodology selects 2010 households from across the UK and from each household selects one person using a Kish grid. In households with only one or two adults, the likelihood of selection is greater than for adults living in households containing many adults. *Weight A* controls for this feature of the sample design by compensating for the unequal probability of selection. It is calculated by dividing the number of adults in the sampled household by the average number of adults per household.

##### *ii. Unit of Analysis: Household (do not weight data)*

On occasions a module may collect information about the household rather than the individual and the appropriate unit of analysis will be the household rather than the individual. For example, the questions might be concerned with details about the accommodation which could be supplied by any adult member of the household. In this case no design weight is required because the information is collected from every household in the responding sample.

#### **4.3 Calibrating the Opinions Sample to ONS Population Totals**

After the initial design weights have been produced, the data is calibrated to ONS population totals. The method uses a standard calibration approach that produces weights which adjust to more than one margin.

#### **4.4 Derivation of the Final Weights**

In the final stage of the weighting procedure, the design weight is multiplied by the calibration factor.

*i. Unit of Analysis: Individual (indwgt)*

The final individual weight (*indwgt*) is the product of the individual calibration factor (which is produced to represent the ONS population totals) and the rescaled design weight (*wta*) (that is the product of *wta* and the population total for adults divided by the number of respondents).

*ii. Unit of Analysis: Household (hhwgt) (variable provided on request)*

The final household weight (*hhwgt*) is the product of the household calibration factor and the household, rescaled design weight. Ideally this design weight would be the total number of households in the population divided by the number of responding households in the sample. However the total number of households in the population is not known. The ratio is estimated by dividing the total number of people in the population by the number of people in all the responding households.

The design weight (*wta*) and the final weight (*indwgt*) are supplied in each survey month.

#### **5 Effective Sample Size**

This method of sampling and the consequent weighting affect the sampling errors of the survey estimates. The effect can be shown by calculating the Effective Sample Size which gives the size of an equal probability sample which is equivalent in precision to the unequal probability sample actually used. The Effective Sample Size will vary slightly from one month to another with the proportions of interviews in different sized households. On average the Effective Sample Size of the Opinions Survey is 84 per cent to 86 per cent of the actual sample of individuals, when *Weight A* is applied. An achieved sample of 1800 individual adults in the Opinions Survey is equivalent to an equal probability sample of about 1500.

#### **6. Conclusion**

The Opinions Survey uses a probability based sample which is recognised as a robust method for collecting reliable data. This report and the accompanying documents are designed to provide everything necessary to use and report on your data with confidence. However, we welcome any further queries you may have and are always interested in seeing any papers or publications resulting from the survey.

## MODULE INSTRUCTIONS

September 2010

Cycle 09/10

The Opinions Survey is only asked of the respondent selected using the Kish grid. Some modules may apply only to certain sections of the population. Check the addressed to whom column for further details.

Module	Title	Addressed to whom	Estimated Average Duration
01	Classificatory Questions	All	12
M210	Tobacco	Smokers	1
MCE	Later Life	All	1
M327b	Sunsmart	All	6.5
M363	Disability	All	6.5

### Time allowances (based on a full quota of 30 addresses)

The Opinions Survey runs to a tight timetable. The individual times given above for individual modules are intended as a rough guide. You should run through the questionnaire using training cases before starting fieldwork.

If you experience difficulties with the times allowed, contact the Field Office via the Field Enquiry Line without delay.

You should claim the actual time spent **up to** these maxima.

- 8 days (48 hours) England, Scotland and Wales within sampled area – excludes travel time to area (4 days (24 hours) for half quotas)
- Up to 3 hours to read the Standard Instruction Manual, Opinions Module and the Opinions Survey Annual Field Interviewer Instructions 2010. (*The Standard Instruction Manual and Opinions Annual Instructions may only be claimed once on your first Opinions quota in the survey year.*)
- Up to 1½ hours to read these monthly instructions and work through training cases.
- Up to 2 hours to prepare for your quota.

**NOTE:** If an Interpreter is used then please specify if this interpreter was a professional ONS interpreter, if the interpreter was the interviewer or if the interpreter was a family member or friend.

## **Classificatory Questions**

These questions are standard and are asked on the Opinions Survey each month. They are similar to the questions asked on the CPS, but shorter in length.

### **Changes from January 2010**

As of January 2010, the Opinions Survey is no longer part of the CPS. As a result, a number of the classificatory questions have been removed. It is now only necessary to interview the selected respondent, that is the individual selected using the Kish grid. Basic information on all household members must be taken to determine who the selected respondent is.

**Client:** Customs and Excise (HMRC)

**Target Group:** All smokers

**Opinion Questions:** None

This module is being run for Customs and Excise (HMRC) and will help them estimate the amount of tobacco that is consumed as cigarettes.

Do not comment on the hazards of smoking or mention your own feelings about smoking.

**M210\_in18** This question is an introduction. These questions are only asked to those that are 18 and over and to those that have indicated in the classificatory question "CigNow" that they smoke.

**M210\_2** Note that daily figures are required for both these questions.

**M210\_3**

**M210\_4** If respondents say that they smoke both packeted and hand-rolled cigarettes please probe to clarify whether they *mainly* smoke one sort more than the other.

**M210\_in16** Due to the change in smoking laws, if the respondent is 16 or 17 then they will not be asked in the classificatory questions if they smoke. However if this particular person is the respondent then they will be given the option to self-complete this module and they will be asked M210\_in16, followed by M210\_2, M210\_3 and M210\_4 from above.

We are only interested in ordinary tobacco which is smoked. You should therefore ignore any references to snuff, tobacco or tobacco products that are chewed or sucked or herbal tobaccos.

**Client:** Department for Work and Pensions (DWP)

**Target Group:** All

**Opinion Questions:** MCE

**This module is being asked on behalf of a number of government departments who want to know what people think of the support available to help older people to continue to live independently in later life.**

**MCE\_1** This question asks the respondent for their opinion on whether older people in their local area are able to get the services and support they need to continue to live at home for as long as they want to. (This could include help or support from public, private or voluntary services or from family, friends and the wider community.)

**MCEb\_2** This question asks whether respondents have any personal experience of receiving, or others receiving, such support or services.

**Client:** Cancer Research UK

**Target Group:** All

**Features:** Picture show card for M327b\_3

**Opinion Questions:** M327b\_1M, M327b\_2M, M327b\_3, M327b\_6, M327b\_7a-e, M327b\_8M, M327b\_9a-f

**This module is being asked on behalf of Cancer Research UK. It looks at people's awareness, perceptions and understanding about sun protection. This module has been run before but has been altered.**

- M327b\_1M** Asks what actions should be taken to reduce the risk of skin cancer. Code all that apply - please do not prompt apart from 'anything else?'
- M327b\_2M** Asks which groups of people are most at risk of skin cancer. Code all that apply - please do not prompt.
- M327b\_3** **Uses a picture showcard.** Asks respondent to select the picture that best describes their skin type. The writing can act as a guide if they're not sure of the picture, but is not meant to be definitive. For example, they could be skin type 1 and have dark hair.
- M327b\_4** Asks if the respondent personally does anything to protect themselves from the sun and/or skin cancer. Please do not prompt. If the respondent answers 'sometimes,' please code this as 'Yes.'
- M327b\_5aM** Only asked if respondent answers 'yes' to M327b\_4. Asks what they do to protect themselves. Code all that apply - please do not prompt apart from 'anything else?'
- M327b\_5bM** Asks if the respondent personally does anything to protect their family from the sun and/or skin cancer. Code all that apply - please do not prompt apart from 'anything else?'
- M327b\_6** Asks if the way the respondent's own skin reacts to the sun influences the level of sun protection they use. Please do not prompt. If the respondent answers 'sometimes,' please code this as 'Yes.'
- M327b\_7a-e** A series of questions asking how important respondents think certain factors are in increasing the risk of skin cancer.
- M327b\_8M** Asks about the major causes of skin cancer. Please code all that apply.
- M327b\_9a-f** A series of statements about sun exposure and vitamin D levels. Respondents are asked how much they agree/disagree with each statement.

**M327b\_10** Asks about respondents' sunbed use.

**Please remember to enter any comments you have on this module in the MintCom section**

**Client:** Department for Work and Pensions.

**Target Group:** All

**Opinion Questions:** M363\_1 to M363\_7

This module is being asked on behalf of the Department of Work and Pensions (DWP). They are interested in information on disability.

There are two questions in this module that ask about awareness of the Disability Discrimination Act. The module aims to identify the scale of problems those with long-term illnesses or disabilities have accessing goods, facilities and services.

These are largely opinion questions about how the respondents view their own health and the effect this has on their lives.

**M363\_1** This is an opinion question as to whether the respondent has a long-standing illness, disability or infirmity. Long-standing means something which has troubled them over a period of at least 12 months or that is likely to affect you over a period of at least 12 months. Please leave it to the respondent to decide what is meant by substantially.

**M363\_2** Identifies whether the disability or illness limits activities in any way again this is in the opinion of the respondent.

**M363\_3M** Probe and code all the significant difficulties the illness causes the respondent. This is important for DWP to see the extent to which disabilities and health problems affect people's lives. Code all areas. Only use the 'None of these' code if this is a spontaneous response from the respondent. This question is asked of all respondents including those who have stated they have no health problem or disability.

**M363\_4** Asks whether the respondent has treatment or medication without which their health problems would cause some or more of the difficulties in the previous question.

**M363\_5 to M363\_6** Asks about previous long term illness (12 months or more), disability or infirmity in the past which does not affect them now and whether this would have affected everyday activities without medication or treatment.

**M363\_6AM** All respondents are asked whether they have ever been diagnosed with HIV, cancer or multiple sclerosis. This is asked as a self-complete question.

The next set of questions relates to respondents who have now or have in the past a disability or long term illness, or those who said they had been diagnosed with one of the conditions listed in M363\_6AM.

**M363\_7** Probe for limiting long-standing illness and disabilities. Please be sensitive to the nature of this questioning. Code all illnesses or disabilities that apply.

**M363\_8M to M363\_10M** These questions relate to which services respondents have had difficulty using in the previous 12 months. The response 'Had no great difficulty in using these services' is not on the card and should only be used if this is a spontaneous response.

**M363\_11M** This question looks at difficulties in arranging travel and in getting around.

**M363\_12** Those who reported no problems in using services are asked why this was.

**M363\_13 to M363\_16M** Look at whether problems have been encountered in renting or buying a property. Include renting from private landlords, Local Authorities and housing associations.

**M363\_17** Asks about respondents' awareness of the Disability Discrimination Act.

**M363\_18** Asks the respondents whether they think they are covered by the Disability Discrimination Act. There is an instruction that allows the interviewer to remind the respondent that the act aims to prevent discrimination against disabled people.

**M363\_UN1** Asks the respondents whether they have heard of any international agreements that the British government may have signed up to protecting the rights of disabled people. This question is asked to all.

**M363\_UN2** Asked to respondents who answered either yes definitely or yes probably in M363\_UN1. Do not read out answer options and do not prompt on response options.

**M363\_UN3** Asked to respondents who do not mention UN convention in either M363\_UN1 or M363\_UN2

**M363\_19 to M363\_23** Asks about any assistance and/or equipment is required.

**M363\_24 to M363\_25** Asks about choice and control in the respondent's life.

**M363\_26 to** Asks about whether the respondent has personally experienced any unfair or

**M363\_27** unpleasant behaviour.

**M363\_28 to M363\_29** Asks about whether the respondent has personally experienced any violent or abusive behaviour.
