II. NEOPLASMS

Notes:

1. Content:

This chapter contains the following broad groups:--

140-195	Malignant neoplasms, stated or presumed to be primary, of specified sites, except of lymphatic and hematopoietic tissue
196-198	Malignant neoplasms, stated or presumed to be secondary, of specified sites
199	Malignant neoplasms without specification of site
200-208	Malignant neoplasms, stated or presumed to be primary, of lymphatic and hematopoietic tissue
210-229	Benign neoplasms
230-234	Carcinoma in situ
235-238	Neoplasms of uncertain behavior [see Note, page 140]
239	Neoplasms of unspecified nature

2. Functional activity

All neoplasms are classified in this chapter, whether or not functionally active.

3. Malignant neoplasms overlapping site boundaries

Categories 140-195 are for the classification of primary malignant neoplasms according to their point of origin. A malignant neoplasm that overlaps two or more subcategories within a three-digit rubric and whose point of origin cannot be determined should be classified to the subcategory .8 "Other." For example: "carcinoma involving tip and ventral surface of tongue" should be assigned to 141.8. On the other hand, "carcinoma of tip of tongue extending to involve the ventral surface" should be coded to 141.2 as the point of origin, the tip, is known. Three subcategories (149.8, 159.8, 165.8) have been provided for malignant neoplasms that overlap the boundaries of three-digit rubrics within certain systems. Overlapping malignant neoplasms that

cannot be classified as indicated above should be assigned to the appropriate subdivision of category 195 (Malignant neoplasm of other and ill-defined sites).

V. MENTAL DISORDERS

This section of the Classification differs from the others in that it includes a glossary, prepared after consultation with experts from many different countries, defining the contents of the rubrics. This difference is considered to be justified because of the special problems posed for psychiatrists by the relative lack of independent laboratory information upon which to base their diagnoses. The diagnosis of many of the most important mental disorders still relies largely upon descriptions of abnormal experience and behavior, and without some guidance in the form of a glossary that can serve as a common frame of reference, psychiatric communications easily become unsatisfactory at both clinical and statistical levels.

Many well-known terms have different meanings in current use. It is important for the user to use the glossary descriptions and not merely the category titles when searching for the best fit for the condition he is trying to code. This is particularly important if a separate national glossary also exists.

The instructions "Use additional code to identify..." are important because of the nature of many psychiatric conditions in which two or more codes are necessary to describe the condition and the associated or causal factors. It should be used whenever possible.

PSYCHOSES (290-299)

Mental disorders in which impairment of mental function has developed to a degree that interferes grossly with insight, ability to meet some ordinary demands of life or to maintain adequate contact with reality. It is not an exact or well defined term. Mental retardation is excluded.

ORGANIC PSYCHOTIC CONDITIONS (290-294)

Syndromes in which there is impairment of orientation, memory, comprehension, calculation, learning capacity and judgement. These are the essential features but there may also be shallowness or lability of affect, or a more

persistent disturbance of mood, lowering of ethical standards and exaggeration or emergence of personality traits, and diminished capacity for independent decision.

Psychoses of the types classifiable to 295-298 and without the above features are excluded even though they may be associated with organic conditions.

The term "dementia" in this glossary includes organic psychoses as just specified, of a chronic or progressive nature, which if untreated are usually irreversible and terminal.

The term "delirium" in this glossary includes organic psychoses with a short course in which the above features are overshadowed by clouded consciousness, confusion, disorientation, delusions, illusions and often vivid hallucinations.

Includes: psychotic organic brain syndrome

Excludes: nonpsychotic syndromes of organic etiology (see 310.-)
 psychoses classifiable to 295-298 and without the above
 features but associated with physical disease, injury, or
 condition affecting the brain [e.g., following childbirth]
 code to 295-298 and use additional code to identify the
 associated physical condition.

290 Senile and presenile organic psychotic conditions

Excludes: psychoses classifiable to 295-298.8 occurring in the senium
 without dementia or delirium (295.0-298.8)
 transient organic psychotic conditions (293.-)
 dementia not classified as senile, presenile, or arterio-
 sclerotic (294.1)

290.0 Senile dementia, simple type

Dementia occurring usually after the age of 65 in which any cerebral pathology other than that of senile atrophic change can be reasonably excluded.

Excludes: mild memory disturbances, not amounting to dementia, associated
with senile brain disease (310.1)
senile dementia:
depressed or paranoid type (290.2)
with confusion and/or delirium (290.3)

290.1 Presenile dementia

Dementia occurring usually before the age of 65 in patients with the relatively rare forms of diffuse or lobar cerebral atrophy. Use additional code to identify the associated neurological condition.

Brain syndrome with presenile brain disease
Circumscribed atrophy of the brain
Dementia in:
Alzheimer's disease
Pick's disease of the brain

Excludes: arteriosclerotic dementia (290.4)
dementia associated with other cerebral conditions (294.1)

290.2 Senile dementia, depressed or paranoid type

A type of senile dementia characterized by development of advanced old age, progressive in nature, in which a variety of delusions and hallucinations of a persecutory, depressive and somatic content are also present. Disturbance of the sleep/waking cycle and preoccupation with dead people are often particularly prominent.

Senile psychosis NOS

290.4 Arteriosclerotic dementia

Dementia attributable, because of physical signs [on examination of the central nervous system] to degenerative arterial disease of the brain. Symptoms suggesting a focal lesion in the brain are common. There may be a fluctuating or patchy intellectual defect with insight, and an intermittent course is common. Clinical differentiation from senile or presenile dementia, which may coexist with it, may be very difficult or impossible. Use additional code to identify cerebral atherosclerosis (437.0).

Excludes: suspected cases with no clear evidence of arteriosclerosis (290.9)

291 Alcoholic psychoses

Organic psychotic states due mainly to excessive consumption of alcohol; defects of nutrition are taught to play an important role. In some of these states, withdrawal of alcohol can be of aetiological significance.

Excludes: alcoholism without psychosis (303)

291.0 Delirium tremens

Acute or subacute organic psychotic states in alcoholics, characterized by clouded consciousness, disorientation, fear, illusions, delusions, hallucinations of any kind, notably visual and tactile, and restlessness, tremor and sometimes fever.

Alcoholic delirium

291.1 Korsakoff's psychosis, alcoholic

A syndrome of prominent and lasting reduction of memory span, including striking loss of recent memory, disordered time appreciation and confabulation, occurring in alcoholics as the sequel to an acute alcoholic psychosis [especially delirium tremens] or, more rarely, in the course of chronic alcoholism. It is usually accompanied by peripheral neuritis and may be associated with Wernicke's encephalopathy.

 form of chronic hallucinosis with clear consciousness in
 an alcoholic

291.4 Pathological drunkenness

Acute psychotic episodes induced by relatively small amounts of alcohol.

These are regarded as individual idiosyncratic reactions to alcohol, not due to excessive consumption and without conspicuous neurological signs of intoxication.

Excludes: simple drunkenness (305.0)

292 Drug psychoses

Syndromes that do not fit the descriptions given in 295-298 (nonorganic psychoses) and which are due to consumption of drugs [notably amphetamines, barbiturates and the opiate and LSD groups] and solvents. Some of the syndromes in this group are not as severe as most conditions labeled "psychotic" but they are included here for practical reasons. Use additional E code to identify the drug and also code drug dependence (304.-) if present.

292.0 Drug withdrawal syndrome

States associated with drug withdrawal ranging from severe, as specified for alcohol under 291.0 (delirium tremens) to less severe states characterized by one or more symptoms such as convulsions, tremor, anxiety, restlessness, gastrointestinal and muscular complaints, and mild disorientation and memory disturbance.

292.1 Paranoid and/or hallucinatory states induced by drugs

States or more than a few days but not usually of more than a few months duration, associated with large or prolonged intake of drugs, notably of the amphetamine and LSD groups. Auditory hallucinations usually predominate, and there maybe anxiety and restlessness.

Excludes: the described conditions with confusion or delirium (293.-)
 states following LSD or other hallucinogens, lasting only a
 few days or less ["bad trips"] (305.3)

292.2 Pathological drug intoxication

OTHER PSYCHOSES (295-299)

295 Schizophrenic disorders

A group of psychoses in which there is a fundamental disturbance of personality, a characteristic distortion of thinking, often a sense of being controlled by alien forces, delusions which may be bizarre, disturbed perception, abnormal affect out of keeping with the real situation, and autism. Nevertheless, clear consciousness and intellectual capacity are usually maintained. The disturbance of personality involves its most basic functions which give the normal person his feeling of individuality, uniqueness and self-direction. The most intimate thoughts, feelings and acts are often felt to be known to or shared by others and explanatory delusions may develop, to the effect that natural or supernatural forces are at work to influence the schizophrenic person's thoughts and actions in ways that are often bizarre. He may see himself as the pivot of all that happens.

Hallucinations, especially of hearing, are common and may comment on the patient or address him. Perception is frequently disturbed in other ways; there may be perplexity, irrelevant features may become all-important and, accompanied by passivity feelings, may lead the patient to believe that everyday objects and situations possess a special, usually sinister, meaning intended for him. In the characteristic schizophrenic disturbance of thinking, peripheral and irrelevant features of a total concept, which are inhibited in normal directed mental activity, are brought to the forefront and utilized in place of the elements relevant and appropriate to the situation. Thus thinking becomes vague, elliptical and obscure, and its expression in speech sometimes incomprehensible. Breaks and interpolations in the flow of consecutive thought are frequent, and the patient may be convinced that his thoughts are being withdrawn by some outside agency. Mood may be shallow, capricious or incongruous. Ambivalence and disturbance of volition may appear as inertia, negativism or stupor. Catatonia may be present. The diagnosis "schizophrenia" should not be made unless there is, or has been evident during the same illness, characteristic disturbance of thought, perception, mood, conduct, or personality--preferably in at least two of these areas. The diagnosis should not be restricted to conditions running a protracted, deteriorating, or chronic course. In addition to making the diagnosis on the criteria just given, effort should be made to specify one of the following subdivisions of schizophrenia, according to the predominant symptoms.

Includes: schizophrenia of the types described in 295.0-295.9 occurring
 in children

Excludes: childhood type schizophrenia (299.9)
 infantile autism (299.0)

295.0 Simple type

A psychosis in which there is insidious development of oddities of conduct, inability to meet the demands of society, and decline in total performance. Delusions and hallucinations are not in evidence and the condition is less obviously psychotic than are the hebephrenic, catatonic and paranoid types of schizophrenia. With increasing social impoverishment vagrancy may ensue and the patient becomes self-absorbed, idle and aimless. Because the schizophrenic symptoms are not clear-cut, diagnosis of this form should be

made sparingly, if at all.

Schizophrenia simplex

Excludes: latent schizophrenia (295.5)

295.1 Hebephrenic type

A form of schizophrenia in which affective changes are prominent, delusions and hallucinations fleeting and fragmentary, behavior irresponsible and unpredictable and mannerisms common. The mood is shallow and inappropriate, accompanied by giggling or self-satisfied, self-absorbed smiling, or by a lofty manner, grimaces, mannerisms, pranks, hypochondriacal complaints and reiterated phrases. Thought is disorganized. There is a tendency to remain solitary, and behavior seems empty of purpose and feeling. This form of schizophrenia usually starts between the ages of 15 and 25 years.

Hebephrenia

295.2 Catatonic type

Includes as an essential feature prominent psychomotor disturbances often alternating between extremes such as hyperkinesia and stupor, or automatic obedience and negativism. Constrained attitudes may be maintained for long periods: if the patient's limbs are put in some unnatural position they may be held there for some time after the external force has been removed. Severe excitement may be a striking feature of the condition. Depressive or hypomanic concomitants may be present.

Catatonic:

agitation
excitation
stupor

Schizophrenic:

catalepsy
catatonia
flexibilitas cerea

295.3 Paranoid type

The form of schizophrenia in which relatively stable delusions, which may be accompanied by hallucinations, dominate the clinical picture. The delusions

are frequently of persecution but may take other forms [for example of jealousy, exalted birth, Messianic mission, or bodily change]. Hallucinations and erratic behavior may occur; in some cases conduct is seriously disturbed from the outset, thought disorder may be gross, and affective flattening with fragmentary delusions and hallucinations may develop.

Paraphrenic schizophrenia

Excludes: paraphrenia, involutinal paranoid state (297.2)
 paranoia (297.1)

295.4 Acute schizophrenic episode

Schizophrenic disorders, other than those listed above, in which there is a dream-like state with slight clouding of consciousness and perplexity. External things, people and events may become charged with personal significance for the patient. There may be ideas of reference and emotional turmoil. In many such cases remission occurs within a few weeks or months, even without treatment.

Oneirophrenia

Schizophreniform:

 catatonic type (295.2)
 hebephrenic type (295.1)
 paranoid type (295.3)
 simple type (295.0)

295.5 Latent schizophrenia

It has not been possible to produce a generally acceptable description for this condition. It is not recommended for general use, but a description is provided for those who believe it to be useful: a condition of eccentric or inconsequent behavior and anomalies of affect which give the impression of schizophrenia though no definite and characteristic schizophrenic anomalies,

present or past, have been manifest. The inclusion terms indicate that this is the best place to classify some other poorly defined varieties of schizophrenia.

Latent schizophrenic reaction

Schizophrenia:

- borderline
- prepsychotic
- prodromal
- pseudoneurotic
- pseudopsychopathic

Excludes: schizoid personality (301.2)

295.6 Residual schizophrenia

A chronic form of schizophrenia in which the symptoms that persist from the acute phase have mostly lost their sharpness. Emotional response is blunted and thought disorder, even when gross, does not prevent the accomplishment of routine work.

Chronic undifferentiated schizophrenia	Restzustand (schizophrenic) Schizophrenic residual state
---	---

295.7 Schizo-affective type

A psychosis in which pronounced manic or depressive features are intermingled with schizophrenic features and which tends towards remission without permanent defect, but which is prone to recur. The diagnosis should be made only when both the affective and schizophrenic symptoms are pronounced.

Cyclic schizophrenia	Schizo-affective psychosis
Mixed schizophrenic and affective psychosis	Schizophreniform psychosis, affective type

296 Affective psychoses

Mental disorders, usually recurrent, in which there is a severe disturbance of mood [mostly compounded of depression and anxiety but also manifested as elation and excitement] which is accompanied by one or more of the following: delusions, perplexity, disturbed attitude to self, disorder of perception and behavior; these are all in keeping with the patient's prevailing mood [as are hallucinations when they occur]. There is a strong tendency to suicide. For practical reasons, mild disorders of mood may also be included here if the symptoms match closely the descriptions given; this applies particularly to mild hypomania.

Excludes: neurotic depression (300.4)
 reactive depressive psychosis (298.0)
 reactive excitation (298.1)

296.0 Manic-depressive psychosis, manic type

Mental disorders characterized by states of elation or excitement out of keeping with the patient's circumstances and varying from enhanced liveliness [hypomania] to violent, almost uncontrollable excitement. Aggression and anger, flight of ideas, distractibility, impaired judgement, and grandiose ideas are common.

Circular type (see 296.2) in which the current condition is not specified as either manic or depressive.

296.6 Manic-depressive psychosis, other and unspecified

Use this code for cases where no other information is available, except the unspecified term, manic-depressive psychosis, or for syndromes corresponding to the descriptions of depressed (296.1) or manic (296.0) types but which for other reasons cannot be classified under 296.0-296.5.

A psychosis, acute or chronic, not classifiable as schizophrenia or affective psychosis, in which delusions, especially of being influenced, persecuted or treated in some special way, are the main symptoms. The delusions are of a fairly fixed, elaborate and systematized kind.

297.1 Paranoia

A rare chronic psychosis in which logically constructed systematized delusions have developed gradually without concomitant hallucinations or the schizophrenic type of disordered thinking. The delusions are mostly of grandeur [the paranoiac prophet or inventor], persecution or somatic abnormality.

Excludes: paranoid personality disorder (301.0)

297.2 Paraphrenia

Paranoid psychosis in which there are conspicuous hallucinations, often in several modalities. Affective symptoms and disordered thinking, if present, do not dominate the clinical picture and the personality is well preserved.

Involucional paranoid state

Late paraphrenia

297.3 Induced psychosis

Mainly delusions psychosis, usually chronic and often without florid features, which appears to have developed as a result of a close, if not dependent, relationship with another person who already has an established similar psychosis. The delusions are at least partly shared. The rare cases in which several persons are affected should also be included here.

Categories 298.0-298.8 should be restricted to the small group of psychotic conditions that are largely or entirely attributable to a recent life experience. They should not be used for the wider range of psychoses in which environmental factors play some [but not the major] part in aetiology.

298.0 Depressive type

A depressive psychosis which can be similar in its symptoms to manic-depressive psychosis, depressed type (296.1) but is apparently provoked by saddening stress such as a bereavement, or a severe disappointment or frustration. There may be less diurnal variation of symptoms than in 296.1, and the delusions are more often understandable in the context of the life experiences. There is usually a serious disturbance of behavior, e.g., major suicidal attempt.

Excludes: manic-depressive psychosis, manic type (296.0)

298.2 Reactive confusion

Mental disorders with clouded consciousness, disorientation [though less marked than in organic confusion] and diminished accessibility often accompanied by excessive activity and apparently provoked by emotional stress.

Psychogenic confusion Psychogenic twilight state

Excludes: acute confusional state (293.0)

298.3 Acute paranoid reaction

Paranoid states apparently provoked by some emotional stress. The stress is often misconstrued as an attack or threat. Such states are particularly prone to occur in prisoners or as acute reactions to a strange and threatening environment, e.g., in immigrants.

Bouffée délirante

Excludes: paranoid states (297.-)

298.4 Psychogenic paranoid psychosis

Psychogenic or reactive paranoid psychosis of any type which is more protracted than the acute reactions covered in 298.3. Where there is a diagnosis of psychogenic paranoid psychosis which does not specify "acute" this coding should be made.

299 Psychoses with origin specific to childhood

This category should be used only for psychoses which always begin before puberty. Adult type psychoses such as schizophrenia or manic-depressive psychoses when occurring in childhood should be coded elsewhere under the appropriate heading--i.e., 295 and 296 for the examples given.

299.0 Infantile autism

A syndrome present from birth or beginning almost invariably in the first 30 months. Responses to auditory and sometimes to visual stimuli are abnormal and there are usually severe problems in the understanding of spoken language. Speech is delayed and, if it develops, is characterized by echolalia, the reversal of pronouns, immature grammatical structure and inability to use abstract terms. There is generally an impairment in the social use of both verbal and gestural language. Problems in social relationships are most severe before the age of five years and include an impairment in the development of eye-to-eye gaze, social attachments, and cooperative play. Ritualistic behavior is usual and may include abnormal routines, resistance to change, attachment to odd objects and stereotyped patterns of play. The capacity for abstract or symbolic thought and for imaginative play is diminished. Intelligence ranges from severely subnormal to normal or above. Performance is usually better on tasks involving rote memory or visuospatial skills than on those requiring symbolic or linguistic skills.

299.1 Disintegrative psychosis

A disorder in which normal or near-normal development for the first few years is followed by a loss of social skills and of speech, together with a severe disorder of emotions, behavior and relationships. Usually this loss of speech and of social competence takes place over a period of a few months and is accompanied by the emergence of overactivity and of stereotypies. In most cases there is intellectual impairment, but this is not a necessary part of the disorder. The condition may follow overt brain disease--such as measles encephalitis--but it may also occur in the absence of any known organic brain disease or damage. Use additional code to identify any associated neurological disorder.

Symptoms may include stereotyped repetitive movements, hyperkinesis, self-injury, retarded speech development, echolalia and impaired social relationships. Such disorders may occur in children of any level of intelligence but are particularly common in those with mental retardation.

NEUROTIC DISORDERS, PERSONALITY DISORDERS,
AND OTHER NONPSYCHOTIC MENTAL DISORDERS (300-316)

300 Neurotic disorders

The distinction between neurosis and psychosis is difficult and remains subject to debate. However, it has been retained in view of its wide use.

Neurotic disorders are mental disorders without any demonstrable organic basis in which the patient may have considerable insight and has unimpaired reality testing, in that he usually does not confuse his morbid subjective experiences and fantasies with external reality. Behavior may be greatly affected although usually remaining within socially acceptable limits, but personality is not disorganized. The principal manifestations include excessive anxiety, hysterical symptoms, phobias, obsessional and compulsive symptoms, and depression.

300.0 Anxiety states

Various combinations of physical and mental manifestations of anxiety, not attributable to real danger and occurring either in attacks or as a persisting state. The anxiety is usually diffuse and may extend to panic. Other neurotic features such as obsessional or hysterical symptoms may be present but do not dominate the clinical picture.

300.1 Hysteria

Mental disorders in which motives, of which the patient seems unaware, produce either a restriction of the field of consciousness or disturbances of motor or sensory function which may seem to have psychological advantage or symbolic value. It may be characterized by conversion phenomena or dissociative phenomena. In the conversion form the chief or only symptoms consist of psychogenic disturbance of function in some part of the body, e.g., paralysis, tremor, blindness, deafness, seizures. In the dissociative variety, the most prominent feature is a narrowing of the field of consciousness which seems to serve an unconscious purpose and is commonly accompanied or followed by a selective amnesia. There may be dramatic but essentially superficial changes of personality sometimes taking the form of a fugue [wandering state]. Behavior may mimic psychosis or, rather, the patient's idea of psychosis.

Neurotic states with abnormally intense dread of certain objects or specific situations which would not normally have that effect. If the anxiety tends to spread from a specified situation or object to a wider range of circumstances,

it becomes akin to or identical with anxiety state, and should be classified as such (300.0)

300.3 Obsessive-compulsive disorders

States in which the outstanding symptom is a feeling of subjective compulsion--which must be resisted--to carry out some action, to dwell on an idea, to recall an experience, or to ruminate on an abstract topic. Unwanted thoughts which intrude, the insistency of words or ideas, ruminations or trains of thought are perceived by the patient to be inappropriate or nonsensical. The obsessional urge or idea is recognized as alien to the personality but as coming from within the self. Obsessional actions may be quasi-ritual performances designed to relieve anxiety, e.g., washing the hands to cope with contamination. Attempts to dispel the unwelcome thoughts or urges may lead to a severe inner struggle, with intense anxiety.

300.4 Neurotic depression

A neurotic disorder characterized by disproportionate depression which has usually recognizably ensued on a distressing experience; it does not include among its features delusions or hallucinations, and there is often preoccupation with the psychic trauma which preceded the illness, e.g., loss of a cherished person or possession. Anxiety is also frequently present and mixed states of anxiety and depression should be included here. The

distinction between depressive neurosis and psychosis should be made not only upon the degree of depression but also on the presence or absence of other neurotic and psychotic characteristics and upon the degree of disturbance of the patient's behavior.

It may follow or accompany an infection or exhaustion, or arise from continued emotional stress. If neurasthenia is associated with a physical disorder, the latter should also be coded.

A neurotic disorder with an unpleasant state of disturbed perception in which external objects or parts of one's own body are experienced as changed in their quality, unreal, remote or automatized. The patient is aware of the subjective nature of the change he experiences. Depersonalization may occur as a feature of several mental disorders including depression, obsessional neurosis, anxiety and schizophrenia; in that case the condition should not be

classified here but in the corresponding major category.

Derealization (neurotic)

300.7 Hypochondriasis

A neurotic disorder in which the conspicuous features are excessive concern with one's health in general or the integrity and functioning of some part of one's body, or, less frequently, one's mind. It is usually associated with anxiety and depression. It may occur as a feature of severe mental disorder and in that case should not be classified here but in the corresponding major category.

301 Personality disorders

Deeply ingrained maladaptive patterns of behavior generally recognizable by

the time of adolescence or earlier and continuing throughout most of adult life, although often becoming less obvious in middle or old age. The personality is abnormal either in the balance of components, their quality and expression or in its total aspect. Because of this deviation or psychopathy the patient suffers or others have to suffer and there is an adverse effect upon the individual or on society. It includes what is sometimes called psychopathic personality, but if this is determined primarily by malfunctioning of the brain, it should not be classified here but as one of the nonpsychotic organic brain syndromes (310). When the patient exhibits an anomaly of personality directly related to his neurosis or psychosis, e.g., schizoid personality and schizophrenia or anankastic personality and obsessive compulsive neurosis, the relevant neurosis or psychosis which is in evidence should be diagnosed in addition.

Character neurosis

301.0 Paranoid personality disorder

Personality disorder in which there is excessive sensitiveness to setbacks or to what are taken to be humiliations and rebuffs, a tendency to distort experience by misconstruing the neutral or friendly actions of others as hostile or contemptuous, and a combative and tenacious sense of personal rights. There may be a proneness to jealousy or excessive self-importance. Such persons may feel helplessly humiliated and put upon; others, likewise excessively sensitive, are aggressive and insistent. In all cases there is excessive self-reference.

301.1 Affective personality disorder

Personality disorder characterized by lifelong predominance of a pronounced

mood which may be persistently depressive, persistently elated, or alternately one then the other. During periods of elation there is unshakeable optimism and an enhanced zest for life and activity, whereas periods of depression are marked by worry, pessimism, low output of energy and a sense of futility.

Cycloid personality Depressive personality
Cyclothymic personality

Excludes: affective psychoses (296.-)

301.2 Schizoid personality disorder

Personality disorder in which there is withdrawal from affectional, social and other contacts with autistic preference for fantasy and introspective reserve. Behavior may be slightly eccentric or indicate avoidance of competitive situations. Apparent coolness and detachment may mask an incapacity to express feeling.

Excludes: schizophrenia (295.-)

301.3 Explosive personality disorder

Personality disorder characterized by instability of mood with liability to intemperate outbursts of anger, hate, violence or affection. Aggression may be expressed in words or in physical violence. The outbursts cannot readily be controlled by the affected persons, who are not otherwise prone to antisocial behavior.

301.4 Anankastic personality disorder

Personality disorder characterized by feelings of personal insecurity, doubt and incompleteness leading to excessive conscientiousness, checking, stubbornness and caution. There may be insistent and unwelcome thoughts or impulses which do not attain the severity of an obsessional neurosis. There is perfectionism and meticulous accuracy and a need to check repeatedly in an attempt to ensure this. Rigidity and excessive doubt may be conspicuous.

Compulsive personality Obsessional personality

Excludes: obsessive-compulsive disorder (300.3)

301.5 Hysterical personality disorder

Personality disorder characterized by shallow, labile affectivity, dependence on others, craving for appreciation and attention, suggestibility and theatricality. There is often sexual immaturity, e.g., frigidity and over-responsiveness to stimuli. Under stress hysterical symptoms [neurosis] may develop.

Psychoinfantile personality Histrionic personality

Excludes: hysterical neurosis (300.1)

301.6 Asthenic personality disorder

Personality disorder characterized by passive compliance with the wishes of elders and others and a weak inadequate response to the demands of daily life. Lack of vigor may show itself in the intellectual or emotional spheres; there is little capacity for enjoyment.

Dependent personality Passive personality
Inadequate personality

Excludes: neurasthenia (300.5)

301.7 Personality disorder with predominantly sociopathic or asocial
 manifestation

Personality disorder characterized by disregard for social obligations, lack of feeling for others, and impetuous violence or callous unconcern. There is a gross disparity between behavior and the prevailing social norms. Behavior is not readily modifiable by experience, including punishment. People with this personality are often affectively cold and may be abnormally aggressive or irresponsible. Their tolerance to frustration is low; they blame others or offer plausible rationalizations for the behavior which brings them into conflict with society.

302 Sexual deviations and disorders

Abnormal sexual inclinations or behavior which are part of a referral problem. The limits and features of normal sexual inclination and behavior have not been stated absolutely in different societies and cultures but are broadly such as serve approved social and biological purposes. The sexual activity of affected persons is directed primarily either towards people not of the opposite sex, or towards sexual acts not associated with coitus normally, or towards coitus performed under abnormal circumstances. If the anomalous behavior becomes manifest only during psychosis or other mental illness the condition should be classified under the major illness. It is common for more than one anomaly to occur together in the same individual; in that case the predominant deviation is classified. It is preferable not to include in this category individuals who perform deviant sexual acts when normal sexual outlets are not available to them.

302.0 Homosexuality

Exclusive or predominant sexual attraction for persons of the same sex with or without physical relationship. Code homosexuality here whether or not it is considered as a mental disorder.

Lesbianism

Excludes: homosexual paedophilia (302.2)

302.1 Bestiality

Sexual or anal intercourse with animals.

302.2 Paedophilia

Sexual deviations in which an adult engages in sexual activity with a child of the same or opposite sex.

302.3 Transvestism

Sexual deviation in which sexual pleasure is derived from dressing in clothes of the opposite sex. There is no consistent attempt to take on the identity or behavior of the opposite sex.

Excludes: trans-sexualism (302.5)

302.4 Exhibitionism

Sexual deviation in which the main sexual pleasure and gratification is derived from exposure of the genitals to a person of the opposite sex.

302.5 Trans-sexualism

Sexual deviation centered around fixed beliefs that the overt bodily sex is wrong. The resulting behavior is directed towards either changing the sexual organs by operation or completely concealing the bodily sex by adopting both the dress and behavior of the opposite sex.

Excludes: transvestism (302.3)

302.6 Disorders of psychosexual identity

Behavior occurring in preadolescents of immature psychosexuality which is similar to that shown in the sexual deviations described under transvestism (302.3) and trans-sexualism (302.5). Cross-dressing is intermittent, although it may be frequent, and identification with the behavior and appearance of the opposite sex is not yet fixed. The commonest form is feminism in boys.

not to active avoidance, to marked anxiety, discomfort or pain when normal sexual intercourse takes place. Less severe degrees of this disorder that also give rise to consultation should also be coded here.

Impotence--sustained inability, due to psychological causes, to maintain an erection which will allow normal heterosexual penetration and ejaculation to take place.

303 Alcohol dependence syndrome

A state, psychic and usually also physical, resulting from taking alcohol, characterized by behavioral and other responses that always include a compulsion to take alcohol on a continuous or periodic basis in order to experience its psychic effects, and sometimes to avoid the discomfort of its absence; tolerance may or may not be present. A person may be dependent on alcohol and other drugs; if so also make the appropriate 304 coding. The level of activity and alertness is characteristically high in relation to the degree of emaciation. Typically the disorder begins in teenage girls but it may sometimes begin before puberty and rarely it occurs in males. Amenorrhoea is usual and there may be a variety of other physiological changes including slow pulse and respiration, low body temperature and dependent oedema. Any part of the body may be involved but the face is most frequently affected. Only one form of tic may be present, or there may be a combination of tics which are carried out simultaneously, alternatively or consecutively. Gilles de la Tourette's syndrome refers to a rare disorder occurring in individuals of any level of intelligence in which facial tics and tic-like throat noises become more marked and more generalized and in which later, whole words or short sentences [often with an obscene content] are ejaculated spasmodically and involuntarily. 310 Specific nonpsychotic mental disorders following organic brain damage

Note: This category should be used only for conditions where the form of the disorder is determined by the brain pathology.

Excludes: neuroses, personality disorders, or other nonpsychotic conditions occurring in a form similar to that seen with functional disorders but in association with a physical condition; code to 300.-, 300.-, etc., and use additional code to identify the physical condition

310.0 Frontal lobe syndrome

Changes in behavior following damage to the frontal areas of the brain or following interference with the connections of those areas. There is a general diminution of self-control, foresight, creativity and spontaneity, which may be manifest as increased irritability, selfishness, restlessness and lack of concern for others. Conscientiousness and powers of concentration are often diminished, but measurable deterioration of intellect or memory is not necessarily present. The overall picture is often one of emotional dullness, lack of drive and slowness; but, particularly in persons previously with

energetic, restless or aggressive characteristics, there may be a change towards impulsiveness, boastfulness, temper outbursts, silly fatuous humour, and the development of unrealistic ambitions; the direction of change usually depends upon the previous personality. A considerable degree of recovery is possible and continue over the course of several years.

Lobotomy syndrome

Postleucotomy syndrome [state]

Excludes: postcontusional syndrome (310.2)

310.1 Cognitive or personality change of other type

Chronic, mild states of memory disturbance and intellectual deterioration, often accompanied by increased irritability, querulousness, lassitude and complaints of physical weakness. These states are often associated with old age, and may precede more severe states due to brain damage classifiable under dementia of any type (290.-, and 294.-) or any condition in 293.- (Transient organic psychotic conditions).

Mild memory disturbance

Organic psychosyndrome of nonpsychotic severity

310.2 Postconcussional syndrome

States occurring after generalized contusion of the brain, in which the symptom picture may resemble that of the frontal lobe syndrome (310.0) or that of any of the neurotic disorders (300.0-300.9), but in which in addition, headache, giddiness, fatigue, insomnia and a subjective feeling of impaired intellectual ability are usually prominent. Mood may fluctuate, and quite ordinary stress may produce exaggerated fear and apprehension. There may be marked intolerance of mental and physical exertion, undue sensitivity to noise, and hypochondriacal preoccupation. The symptoms are more common in persons who have previously suffered from neurotic or personality disorders or when there is a possibility of compensation. This syndrome is particularly associated with the closed type of head injury when signs of localized brain damage are slight or absent, but it may also occur in other conditions.

Postcontusional syndrome (encephalopathy)

Post-traumatic brain syndrome, nonpsychotic
Status postcommotio cerebri

Excludes: frontal lobe syndrome (310.0)

 prolonged depressive adjustment reaction (309.1)

psychogenic depressive psychosis (298.0)

312 Disturbance of conduct, not elsewhere classified

Disorders mainly involving aggressive and destructive behavior and disorders involving delinquency. It should be used for abnormal behavior, in individuals of any age, which gives rise to social disapproval but which is not part of any other psychiatric condition. Minor emotional disturbances may also be present. To be included, the behavior--as judged by its frequency, severity and type of associations with other symptoms--must be abnormal in its context. Disturbances of conduct are distinguished from an adjustment reaction by a longer duration and by a lack of close relationship in time and content to some stress. They differ from a personality disorder by the absence of deeply ingrained maladaptive patterns of behavior present from adolescence or earlier.

Excludes: adjustment reaction with disturbance of conduct (309.3)
 drug dependence (304.-)
 personality disorder with predominantly sociopathic or
 asocial manifestations (301.7)
 sexual deviations (302.-)

312.0 Unsocialized disturbance of conduct

Unsocialized aggressive disorder

312.1 Socialized disturbance of conduct

Neurotic delinquency

Excludes: compulsive conduct disorder (312.2)

313 Disturbance of emotions specific to childhood and adolescence

Less well differentiated emotional disorders characteristic of the childhood period. Where the emotional disorder takes the form of a neurotic disorder described under 300.-, the appropriate 300.- coding should be made. This category differs from category 308.- in terms of longer duration and by the lack of close relationship in time and content to some stress.

Excludes: adjustment reaction (309.-)
masturbation, nail-biting, thumb-sucking, and other isolated symptoms (307.-)

313.0 With anxiety and fearfulness

symptoms involve anxiety and fearfulness. Many cases of school refusal or elective mutism might be included here.

Excludes: abnormal separation anxiety (309.2)
 anxiety states (300.0)
 hospitalism in children (309.8)

Excludes: depressive neurosis (300.4)

313.2 With sensitivity, shyness, and social withdrawal

Emotional disorders characteristic of childhood in which the main symptoms involve sensitivity, shyness, or social withdrawal. Some cases of elective mutism might be included here.

Withdrawing reaction of childhood or adolescence

Excludes: infantile autism (299.0)

313.3 Relationship problems

Emotional disorders characteristic of childhood in which the main symptoms involve relationship problems.

Sibling jealousy

Excludes: relationship problems associated with aggression, destruction,

or other forms of conduct disturbance (312.-)

313.8 Other or mixed

Many emotional disorders of childhood include several elements but whenever possible a specific coding under .0, .1, .2 or .3 should be made according to the preponderant type of disturbance. The category of mixed disorders should only be used when there is such an admixture that this cannot be done.

313.9 Unspecified

314 Hyperkinetic syndrome of childhood

Disorders in which the essential features are short attention-span and distractibility. In early childhood the most striking symptom is disinhibited, poorly organized and poorly regulated extreme overactivity but in adolescence this may be replaced by underactivity. Impulsiveness, marked mood fluctuations and aggression are also common symptoms. Delays in the development of specific skills are often present and disturbed, poor relationships are common. If the hyperkinesis is symptomatic of an underlying disorder, code the underlying disorder instead.

314.0 Simple disturbance of activity and attention

Cases in which short attention span, distractibility, and overactivity are the main manifestations without significant disturbance of conduct or delay in specific skills.

Overactivity NOS

314.1 Hyperkinesis with developmental delay

315 Specific delays in development

A group of disorders in which a specific delay in development is the main feature. In each case development is related to biological maturation but it is also influenced by nonbiological factors and the coding carries no aetiological implications.

Excludes: when due to a neurological disorder (320-389)

315.0 Specific reading retardation

Disorders in which the main feature is a serious impairment in the development of reading or spelling skills which is not explicable in terms of general intellectual retardation or of inadequate schooling. Speech or language difficulties, impaired right-left differentiation, perceptuo-motor problems, and coding difficulties are frequently associated. Similar problems are often present in other members of the family. Adverse psychosocial factors may be present.

Developmental dyslexia

Specific spelling difficulty

315.1 Specific arithmetical retardation

Disorders in which the main feature is a serious impairment in the development of arithmetical skills which is not explicable in terms of general intellectual retardation or of inadequate schooling.

Dyscalculia

315.2 Other specific learning difficulties

Disorders in which the main feature is a serious impairment in the development of other learning skills which are not explicable in terms of general intellectual retardation or of inadequate schooling.

Excludes: specific arithmetical retardation (315.1)
 specific reading retardation (315.0)

315.3 Developmental speech or language disorder

Disorders in which the main feature is a serious impairment in the development of speech or language [syntax or semantics] which is not explicable in terms of general intellectual retardation. Most commonly there is a delay in the development of normal word-sound production resulting in defects of articulation. Omissions or substitutions of consonants are most frequent. There may also be a delay in the production of spoken language. Rarely, there is also a developmental delay in the comprehension of sounds. Includes cases in which delay is largely due to environmental privation.

Developmental aphasia

Dyslalia

Excludes: acquired aphasia (784.3)
 elective mutism (309.8, 313.0, 313.2)
 lisping and lalling (307.9)

315.4 Specific motor retardation

Disorders in which the main feature is a serious impairment in the development

of motor coordination which is not explicable in terms of general intellectual retardation. The clumsiness is commonly associated with perceptual difficulties.

Clumsiness syndrome

Dyspraxia syndrome

315.5 Mixed development disorder

A delay in the development of one specific skill [e.g., reading, arithmetic, speech or coordination] is frequently associated with lesser delays in other skills. When this occurs the coding should be made according to the skill most seriously impaired. The mixed category should be used only where the mixture of delayed skills is such that no one skill is preponderantly affected.

316 Psychic factors associated with diseases classified elsewhere

Mental disturbances or psychic factors of any type thought to have played a major part in the aetiology of physical conditions, usually involving tissue damage, classified elsewhere. The mental disturbance is usually mild and nonspecific and psychic factors [worry, fear, conflict, etc.] may be present without any overt psychiatric disorder. Use an additional code to identify the physical condition. In the rare instance that an overt psychiatric disorder is thought to have caused a physical condition, use a second additional code to record the psychiatric diagnosis.

Examples of the use of this category are:

psychogenic:

asthma (316 and 493.9)

dermatitis (316 and 692.-)

eczema (316 and 691.-, or 692.-)

gastric ulcer (316 and 531.-)
mucous colitis (316 and 564.1)
ulcerative colitis (316 and 556)
urticaria (316 and 708.-)
psychosocial dwarfism (316 and 259.4)

Excludes: physical symptoms and physiological malfunctions, not involving
 tissue damage, of mental origin (306.-)

MENTAL RETARDATION (317-319)

A condition of arrested or incomplete development of mind which is especially characterized by subnormality of intelligence. The coding should be made on the individual's current level of functioning without regard to its nature or causation such as psychosis, cultural deprivation, Down's syndrome etc. Where there is a specific cognitive handicap, such as in speech, the four-digit coding should be based on assessments of cognition outside the area of specific handicap. The assessment of intellectual level should be based on whatever information is available, including clinical evidence, adaptive behavior and psychometric findings. The IQ levels given are based on a test with a mean of 100 and a standard deviation of 15-such as the Wechsler scales. They are provided only as a guide and should not be applied rigidly. Mental retardation often involves psychiatric disturbances and may often develop as a result of some physical disease or injury. In these cases, an additional code or codes should be used to identify any associated condition, psychiatric or physical. The Impairment and Handicap codes should also be consulted.

XVI. SYMPTOMS, SIGNS, AND ILL-DEFINED CONDITIONS

This section includes symptoms, signs, abnormal results of laboratory or other investigative procedures, and ill-defined conditions regarding which no diagnosis classifiable elsewhere is recorded.

Signs and symptoms that point rather definitely to a given diagnosis are assigned to some category in the preceding part of the classification. In general, categories 780-796 include the more ill-defined conditions and symptoms that point with perhaps equal suspicion to two or more diseases or to two or more systems of the body, and without the necessary study of the case to make a final diagnosis. Practically all categories in this group could be designated as "not otherwise specified," or as "unknown etiology," or as "transient."

The conditions and signs or symptoms included in categories 780-796 consist of: (a) cases for which no more specific diagnosis can be made even after all facts bearing on the case have been investigated; (b) signs or symptoms existing at the time of initial encounter that proved to be transient and whose causes could not be determined; (c) provisional diagnoses in a patient who failed to return for further investigation or care; (d) cases referred elsewhere for investigation or treatment before the diagnosis was made; (e) cases in which a more precise diagnosis was not available for any other reason; (f) certain symptoms which represent important problems in medical care and which it might be desired to classify in addition to a known cause.

SUPPLEMENTARY CLASSIFICATION OF EXTERNAL CAUSES OF INJURY AND POISONING

This section is provided to permit the classification of environmental events, circumstances and conditions as the cause of injury, poisoning and other adverse effects. Where a code from this section is applicable, it is intended that it shall be used in addition to a code from one of the main chapters of the International Classification of Diseases, Injuries and Causes of Death, indicating the nature of the condition. Most often, the nature of the condition will be classifiable to Chapter XVII, Injuries, Poisoning and Violence, and for the classification of the underlying cause of death these will always require an "E" code in addition. Causes of death should preferably be tabulated according to both the Chapter XVII and the "E" codes, but if only one code is tabulated then the "E" code should be used in preference to the Chapter XVII code. Certain other conditions which may be stated to be due to external causes are classified in Chapters I to XVI of ICD, and for these the "E" code classification should be used as an additional code for multiple-condition analysis only.

Machinery accidents [other than connected with transport] are classifiable to category E919, in which the fourth digit allows a broad classification of the type of machinery involved. If a more detailed classification of type of machinery is required, it is suggested that the "Classification of Industrial Accidents according to Agency," prepared by the International Labor Office, be used in addition.

Categories for "late effects" of accidents and other external causes are to be found at E929, E959, E969, E977, E989, and E999.

Definitions and examples related to transport accidents

(a) A transport accident (E800-E848) is any accident involving a device designed primarily for, or being used at the time primarily for, conveying persons or goods from one place to another.

Includes: accidents involving:
 aircraft and spacecraft (E840-E848)
 watercraft (E830-E838)
 motor vehicle (E810-E825)

railway (E800-E807)
other road vehicles (E826-E829)

In classifying accidents which involve more than one kind of transport, the above order of precedence of transport accidents should be used.

Accidents involving agricultural and construction machines, such as tractors, cranes and bulldozers, are regarded as transport accidents only when these vehicles are under their own power on a highway [otherwise the vehicles are regarded as machinery]. Vehicles which can travel on land or water, such as hovercraft and other amphibious vehicles, are regarded as watercraft when on the water, as motor vehicles when on the highway, and as off-road motor vehicles when on land, but off the highway.

Excludes: accidents:
 in sports which involve the use of transport but where the
 transport vehicle itself is not involved in the
 accident
 involving vehicles which are part of industrial equipment
 used entirely on industrial premises
 occurring during transportation but unrelated to the hazards
 associated with the means of transportation [e.g.,
 injuries received in a fight on board ship; transport
 vehicle involved in a cataclysm such as an earthquake]
 to persons engaged in the maintenance or repair of transport
 equipment or vehicle not in motion, unless injured by
 another vehicle in motion

(b) A railway accident is a transport accident involving a railway train or other railway vehicle operated on rails, whether in motion or not.

Excludes: accidents:
 in repair shops
 in roundhouse or on turntable
 on railway premises but not involving a train or other
 railway vehicle

(c) A railway train or railway vehicle is any device with or without cars

coupled to it, designed for traffic on a railway.

Includes: railway train, any power [steam] [electric] [diesel]
subterranean or elevated
monorail or two-rail
funicular

interurban:

electric car } (operated chiefly on its own right-of-way,
streetcar) not open to other traffic)
other vehicle designed to run on a railway track

Excludes: interurban electric cars [streetcars] specified to be operating
on a right-of-way that forms part of the public street or
highway [definition (n)]

(d) A railway or railroad is a right-of-way designed for traffic on rails, which is used by carriages or wagons transporting passengers or freight, and by other rolling stock, and which is not open to other public vehicular traffic.

(e) A motor vehicle accident is a transport accident involving a motor vehicle. It is defined as a motor vehicle traffic accident or as a motor vehicle nontraffic accident according to whether the accident occurs on a public highway or elsewhere.

Excludes: injury or damage due to cataclysm
injury or damage while a motor vehicle, not under its own power,
is being loaded on, or unloaded from, another conveyance

(f) A motor vehicle traffic accident is any motor vehicle accident occurring on a public highway [i.e., originating, terminating or involving vehicle partially on the highway]. A motor vehicle accident is assumed to have occurred on the highway unless another place is specified, except in the case of accidents involving only off-road motor vehicles, which are classified as nontraffic accidents unless the contrary is stated.

(g) A motor vehicle nontraffic accident is any motor vehicle accident which

occurs entirely in any place other than a public highway.

(h) A public highway [trafficway] or street is the entire width between property lines [or other boundary lines] of every way or place, of which any part is open to the use of the public for purposes of vehicular traffic as a matter of right or custom. A roadway is that part of the public highway designed, improved and ordinarily used, for vehicular travel.

Includes: approaches (public) to:
 docks
 public building
 station

Excludes:	driveway (private)	roads in:
	parking lot	industrial premises
	ramp	mine
	roads in:	private grounds
	airfield	quarry
	farm	

(i) A motor vehicle is any mechanically or electrically powered device, not operated on rails, upon which any person or property may be transported or drawn upon a highway. Any object such as a trailer, coaster, sled, or wagon being towed by a motor vehicle is considered a part of the motor vehicle.

Includes: automobile [any type]
 bus
 construction machinery, farm and industrial machinery, steam
 roller, tractor, army tank, highway grader or similar
 vehicle on wheels or treads, while in transport under own
 power
 fire engine (motorized)
 motorcycle
 motorized bicycle [moped] or scooter
 trolley bus not operating on rails
 truck
 van

Excludes: devices used solely to move persons or materials within the
confines of a building and its premises, such as:
building elevator
coal car in mine
electric baggage or mail truck used solely within a railroad
station
electric truck used solely within an industrial plant
moving overhead crane

(j) A motorcycle is a two-wheeled motor vehicle having one or two riding
saddles and sometimes having a third wheel for the support of a sidecar. The
sidecar is considered part of the motorcycle.

Includes: motorized:
bicycle
scooter
tricycle

(k) An off-road motor vehicle is a motor vehicle of special design, to enable
it to negotiate rough or soft terrain or snow. Examples of special design are
high construction, special wheels and tires, drive by tracks, or support on a
cushion of air.

Includes: army tank
hovercraft, on land or swamp
snowmobile

(l) A driver of a motor vehicle is the occupant of the motor vehicle
operating it or intending to operate it. A motorcyclist is the driver of a
motor cycle. Other authorized occupants of a motor vehicle are passengers.

(m) An other road vehicle is any device, except a motor vehicle, in, on, or
by which any person or property may be transported on a highway.

Includes: animal carrying a person or goods
animal-drawn vehicle
animal harnessed to conveyance
bicycle [pedal cycle]

street car
tricycle (pedal)

Excludes: pedestrian conveyance [definition (q)]

(n) A streetcar is a device designed and used primarily for transporting persons within a municipality, running on rails, usually subject to normal traffic control signals, and operating principally on a right-of-way that forms part of the traffic way. A trailer being towed by a streetcar is considered a part of the streetcar.

Includes: interurban electric or streetcar, when specified to be operating
on a street or public highway
